Answer: B

NEW QUESTION # 77

Where is the operating system of a Raspberry Pi stored?

- A. On rewritable flash storage which is built into the Raspberry Pi.
- B. On a Linux extension module connected to the Raspberry Pi's GPIO pins.
- **C. On a removable SD card which is put into the Raspberry Pi.**
- D. On a read only partition on the Raspberry Pi's firmware, next to the BIOS.
- E. On the master device attached to the Raspberry Pi's IDE bus.

Answer: C

Explanation:

Explanation

The Raspberry Pi uses an SD card (or microSD card for newer models) as its main storage device. This means that the operating system and any other files are stored on the SD card, which can be easily inserted or removed from the Raspberry Pi. The SD card also allows the user to switch between different operating systems by using different cards or partitions. The Raspberry Pi does not have any internal storage, such as a hard disk drive or a solid state drive, nor does it use any external devices, such as an IDE bus, a firmware partition, or a GPIO module, to store the operating system.
