Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q38-Q43):

NEW QUESTION # 38

What does hardening mean in the context of cybersecurity?

- **A. Making a system more resistant to threats and attacks**
- B. Implementing cybersecurity policies and regulations
- C. Removing all vulnerabilities from a system or network
- D. Creating a backup of critical data and configurations

Answer: A

Explanation:

Hardening refers to the process of securing a system by reducing its vulnerability to potential threats and attacks. It involves implementing security best practices, such as disabling unnecessary services, applying patches and updates, configuring access controls, strengthening passwords, and employing additional security measures like firewalls or intrusion detection systems. Hardening helps ensure systems are less susceptible to exploitation.

NEW QUESTION # 39

Which state of data is appropriate for encrypting sensitive information stored in a database?

- A. Data in transit
- **B. Data at rest**
- C. Data in use
- D. Data in motion

Answer: B

Explanation:

Data at rest refers to data that is stored on storage devices such as hard drives, databases, or backups. Encrypting sensitive information in a database while it is at rest ensures that even if the database is compromised, the data remains protected, and unauthorized access or theft of the data becomes more challenging.

NEW QUESTION # 40

Which logging mechanism is associated with network devices such as routers, switches, and firewalls?

- A. Event Viewer
- B. Audit logs
- C. System and application logs
- **D. Syslog**

Answer: D

Explanation:

Syslog is commonly used in network devices such as routers, switches, and firewalls to send event log messages to a syslog server. It allows network administrators to centrally collect and view logs from multiple devices, enabling efficient monitoring, troubleshooting, and security analysis of network infrastructure.

NEW QUESTION # 41

What is the primary advantage of using reputation-based detection as a threat intelligence technique?

- A. It requires less computational resources compared to other techniques.
- B. It provides real-time detection of zero-day threats.
- C. It can detect new or emerging threats based on their behaviors.
- **D. It helps block threats based on their historical behavior or reputation.**

Answer: D

Explanation:

Reputation-based detection uses information about the historical behavior or reputation of entities (such as IP addresses or domains) to determine their threat level. It helps in blocking threats known for their malicious activities.

NEW QUESTION # 42

Which of the following best describes the concept of automation in cybersecurity testing?

- A. Conducting manual security tests
- B. Implementing security controls to prevent attacks
- **C. Using software and tools to automatically conduct security tests**
- D. Performing physical tests on network infrastructure

Answer: C

Explanation:

Automation in cybersecurity testing involves using software and tools to automatically conduct security tests. This approach helps to increase efficiency and accuracy by automating repetitive tasks, such as vulnerability scanning, penetration testing, and log analysis. It allows for the identification of security issues and vulnerabilities in a timely manner.
