あなたにVMwareの2V0-16.25試験に合格できるのは我々の努力への最大の認可です。この目標を達成するために、我々はVMwareの2V0-16.25試験の資料を改善し続けてあなたに安心して利用させます。我々の商品とサービスに疑問があったら、我々Jpshikenのウェブ・サイトで問い合わせたり、メールで我々と連絡したりすることができます。あなたの購入してから、VMwareの2V0-16.25試験ソフトが更新されたら、我々はメールであなたを通知します。

VMware 2V0-16.25 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
トピック 2	• IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.

トピック 3	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
トピック 4	Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
トピック 5	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.

VMware 2V0-16.25資料勉強、2V0-16.25最新テスト

激変なネット情報時代で、質の良いVMwareの2V0-16.25問題集を見つけるために、あなたは悩むことはありませんか。私たちは君がJpshikenを選ぶことと正確性の高いVMwareの2V0-16.25問題集を祝っています。JpshikenのVMwareの2V0-16.25問題集が君の認定試験に合格するのに大変役に立ちます。

VMware vSphere Foundation 9.0 Administrator 認定 2V0-16.25 試験問題 (Q48-Q53):

質問 # 48

An administrator is tasked to create a new view in VMware Cloud Foundation (VCF) Operations to monitor CPU demand on ESX hosts, including the historical and forecast data.

Which view type is appropriate to display such information?

- A. Distribution
- **B. Trend**
- C. Table
- D. Text

正解: B

解説:

In VCF Operations, when monitoring metrics like CPU demand across ESX hosts, including historical usage and forecast data, the best visualization is a Trend view.

* Trend view displays data over time, showing both past and predicted future behavior.

* This makes them ideal for capacity planning, performance forecasting, and demand analysis.

* Table (A) # Shows raw values but lacks predictive visualization.

* Distribution (B) # Useful for comparing values across objects but not for time-based or forecasted trends.

* Text (C) # Displays static values or metrics, not historical/forecasting data.

質問 # 49

An administrator is tasked to implement a new iSCSI storage for a new cluster.

The following information was provided to the administrator:

- * iSCSI storage controller IPs are all in the same subnet.
- * Multipathing should be used.
- * Storage supports Asymmetric Logical Unit Access (ALUA).
- * Should be configured for high performance.

Which are the four required steps to configure this on an ESX host? (Choose four.)

- A. Configure two unbound VMkernel ports.
- B. Add NVMe over TCP software adapter.
- C. Set Path Selection Policy (PSP) to Most Recently Used (MRU).
- **D. Configure 1 vSwitch with 2 Uplinks.**
- **E. Add iSCSI software adapter.**
- **F. Configure two bound VMkernel ports.**
- G. Configure 2 vSwitch with 1 Uplink.
- **H. Set Path Selection Policy (PSP) to Round Robin (RR).**

正解: D、E、F、H

解説:

For iSCSI multipathing with ALUA and high performance in ESXi:

- * 1 vSwitch with 2 Uplinks# Standard design for redundancy and multipathing. (B)
- * Add iSCSI software adapter# Required to connect to storage. (E)
- * Configure two bound VMkernel ports# Ensures multipathing (one per uplink). (G)
- * Set PSP to Round Robin (RR)# Optimizes I/O balancing across multiple paths. (F) Other options:
- * A. 2 vSwitches with 1 Uplink each# Not recommended, complicates multipathing.
- * C. NVMe over TCP# Not relevant, storage is iSCSI.
- * D. MRU policy# Legacy, not high performance.
- * H. Unbound VMkernel ports# Used for software iSCSI port binding, but "bound" VMkernel ports are required for multipathing.

質問 # 50

What is the primary purpose of using VMware vSphere Foundation (VVF) Lifecycle Manager for ESX hosts?

- A. To create and manage virtual machines
- B. To monitor the performance of ESX hosts
- C. To configure network settings for ESX hosts
- **D. To update and maintain the ESX host lifecycle**

正解: D

解説:

The primary purpose of vSphere Lifecycle Manager (vLCM) is to:

- * Update, patch, and upgrade ESXi hosts, firmware, and drivers.
- * Manage host consistency across clusters with image-based lifecycle management.

Other options are unrelated:

- * A. Configure network settings# Done through vCenter or host client, not vLCM.
- * B. Monitor performance# Done in vCenter/VCF Operations, not vLCM.
- * C. Create/manage VMs# Managed through vCenter, not vLCM.

質問 # 51

What are the two methods to add a widget to a VMware Cloud Foundation (VCF) Operations for Logs dashboard? (Choose two.)

- A. Drag and drop the widget in the dashboard design pane.
- B. Import the widget in the dashboard design pane.
- C. Open Management Pack Builder and clone the widget.
- D. Clone the widget from an existing dashboard.
- E. Create the widget in Explore Logs and click Add to Dashboard.

正解: A、E

解説:

Two supported methods exist for adding widgets to VCF Operations for Logs dashboards:

- * From Explore Logs- Create a widget (e.g., query result) and select Add to Dashboard. (B)
- * Dashboard Design Pane- Use the design interface to drag and drop widgets. (C) Other options:
- * A. Clone widget from existing dashboard# Not a supported method.
- * D. Import widget in design pane# Import is for dashboards, not individual widgets.
- * E. Management Pack Builder# Not related to Logs dashboard widgets.

質問 # 52

An administrator has enabled a Supervisor on a vSphere cluster. The DevOps team has requested access to vSphere resources such as virtual machines, storage, and networking using Kubernetes tooling. To meet this request, the administrator must provide secure, policy-based access that sets clear boundaries for compute and storage consumption. Which function is provided by Supervisor services to support this use case?

- A. Enable virtual machine backup using native Kubernetes ConfigMaps.
- B. Enable vSphere Replication between Supervisor Namespaces.
- C. Allow access to vSphere resources through Kubernetes in a configured Supervisor Namespace.
- D. Grant DevOps users administrator access to the vCenter Server system namespace.

正解: C

解説:

When Supervisor is enabled:

- * It provides Supervisor Namespaces, which grant DevOps teams secure, policy-based access to vSphere resources (VMs, storage, networking) through Kubernetes tooling.
- * This enforces boundaries and quotas for compute/storage consumption.
- Other options:
- * B. VM backup via ConfigMaps# Not a feature of Supervisor.
- * C. vSphere Replication between namespaces# Not a Supervisor function.
- * D. Granting administrator access to vCenter system namespace# Violates least-privilege security.
