Get the Microsoft AZ-400 Certification to Boost Your Professional Career

With the furious competition of the society, our Actual4Cert still have a good reputation from candidates in IT exam certification, because we always develop our exam software in the examinees' stand. For instance, AZ-400 exam software with good sales is developed by our professional technical team with deep analysis of a lot of AZ-400 Exam Questions. Although we guarantee "No help, full refund", those who have purchased our products have pass the exam successfully, which shows the effectiveness and

reliability of our AZ-400 exam software.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q166-Q171):

NEW QUESTION # 166

You use Azure Pipelines to manage project builds and deployments.

You plan to use Azure Pipelines for Microsoft Teams to notify the legal team when a new build is ready for release. You need to configure the Organization Settings in Azure DevOps to support Azure Pipelines for Microsoft Teams. What should you turn on?

- A. Alternate authentication credentials
- **B. Azure Active Directory Conditional Access Policy Validation**
- C. Third-party application access via OAuth
- D. SSH authentication

Answer: B

Explanation:

Explanation

The Azure Pipelines app uses the OAuth authentication protocol, and requires Third-party application access via OAuth for the organization to be enabled. To enable this setting, navigate to Organization Settings > Security > Policies, and set the Third-party application access via OAuth for the organization setting to On.

Reference:

<https://docs.microsoft.com/en-us/azure/devops/pipelines/integrations/microsoft-teams>

Topic 1, Case Study: 1 Overview

Existing Environment

Litware, Inc. an independent software vendor (ISV) Litware has a main office and five branch offices.

Application Architecture

The company's primary application is a single monolithic retirement fund management system based on ASP.NET web forms that use logic written in VB.NET. Some new sections of the application are written in C#.

Variations of the application are created for individual customers. Currently, there are more than 80 have code branches in the application's code base.

The application was developed by using Microsoft Visual Studio. Source code is stored in Team Foundation Server (TFS) in the main office. The branch offices access of the source code by using TFS proxy servers.

Architectural Issues

Litware focuses on writing new code for customers. No resources are provided to refactor or remove existing code. Changes to the code base take a long time, AS dependencies are not obvious to individual developers.

Merge operations of the code often take months and involve many developers. Code merging frequently introduces bugs that are difficult to locate and resolve.

Customers report that ownership costs of the retirement fund management system increase continually. The need to merge unrelated code makes even minor code changes expensive.

Requirements

Planned Changes

Litware plans to develop a new suite of applications for investment planning. The investment planning Applications will require only minor integration with the existing retirement fund management system.

The investment planning applications suite will include one multi-tier web application and two iOS mobile applications. One mobile application will be used by employees; the other will be used by customers.

Litware plans to move to a more agile development methodology. Shared code will be extracted into a series of package.

Litware has started an internal cloud transformation process and plans to use cloud based services whenever suitable.

Litware wants to become proactive in detecting failures, rather than always waning for customer bug reports.

Technical Requirements

The company's investment planning applications suite must meet the following technical requirements:

- * New incoming connections through the firewall must be minimized.
- * Members of a group named Developers must be able to install packages.
- * The principle of least privilege must be used for all permission assignments
- * A branching strategy that supports developing new functionality in isolation must be used.
- * Members of a group named Team leaders must be able to create new packages and edit the permissions of package feeds
- * Visual Studio App Center must be used to centralize the reporting of mobile application crashes and device types in use.
- * By default, all App Center must be used to centralize the reporting of mobile application crashes and device types in use.
- * Code quality and release quality are critical. During release, deployments must not proceed between stages if any active bugs are logged against the release.

* The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HUPS.

* The required operating system configuration for the test servers changes weekly. Azure Automation State Configuration must be used to ensure that the operating system on each test servers configured the same way when the servers are created and checked periodically.

Current Technical

The test servers are configured correctly when first deployed, but they experience configuration drift over time. Azure Automation State Configuration fails to correct the configurations.

Azure Automation State Configuration nodes are registered by using the following command.

NEW QUESTION # 167

You have an Azure DevOps project that contains a build pipeline. The build pipeline uses approximately 50 open source libraries. You need to ensure that all the open source libraries comply with your company's licensing standards.

Which service should you use?

- A. Black Duck
- B. Maven
- C. Helm
- D. NuGet

Answer: A

Explanation:

Explanation

Secure and Manage Open Source Software

Black Duck helps organizations identify and mitigate open source security, license compliance and code-quality risks across application and container portfolios.

Black Duck Hub and its plugin for Team Foundation Server (TFS) allows you to automatically find and fix open source security vulnerabilities during the build process, so you can proactively manage risk. The integration allows you to receive alerts and fail builds when any Black Duck Hub policy violations are met.

Note: WhiteSource would also be a good answer, but it is not an option here.

NEW QUESTION # 168

You need to implement Project6.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Scenario: Implement Project3, Project5, Project6, and Project7 based on the planned changes

Step 1: Open the release pipeline editor.

In the Releases tab of Azure Pipelines, select your release pipeline and choose Edit to open the pipeline editor.

Step 2: Enable Gates.

Choose the pre-deployment conditions icon for the Production stage to open the conditions panel. Enable gates by using the switch control in the Gates section.

Step 3: Add Query Work items.

Choose + Add and select the Query Work Items gate.

Configure the gate by selecting an existing work item query.

Note: A case for release gate is:

Incident and issues management. Ensure the required status for work items, incidents, and issues. For example, ensure deployment occurs only if no priority zero bugs exist, and validation that there are no active incidents takes place after deployment.

<https://docs.microsoft.com/en-us/azure/devops/pipelines/release/deploy-using-approvals?view=azure-devops#co>

NEW QUESTION # 169

You have several apps that use an Azure SQL Database named db1.
You need to ensure that queries to db1 are tuned by Azure over time. The solution must only apply to db1.
To complete this task, sign in to the Microsoft Azure portal.

Answer:

Explanation:
See solution below.
Explanation

1. To enable automatic tuning on a single database, navigate to the database in the Azure portal and select Automatic tuning.
2. Select the automatic tuning options you want to enable and select Apply.

Note: Individual automatic tuning settings can be separately configured for each database. You can manually configure an individual automatic tuning option, or specify that an option inherits its settings from the server.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/automatic-tuning-enable>

NEW QUESTION # 170

You have an Azure subscription that contains the resources shown in the following table.
DepPipeline1 and ADFPipeline1 use a single credential that is stored in Vault.
You need to configure ADFPipeline1 to retrieve the credential from Vault.
Which type of activity should you use?

- A. Copy
- **B. Web**
- C. Get Metadata
- D. Lookup

Answer: B

NEW QUESTION # 171

.....

Now on the Internet, a lot of online learning platform management is not standard, some web information may include some viruses, cause far-reaching influence to pay end users and adverse effect. Choose the AZ-400 Study Tool, can help users quickly analysis in the difficult point, high efficiency of review, and high quality through the Designing and Implementing Microsoft DevOps Solutions exam, work for our future employment and increase the weight of the promotion, to better meet the needs of their own development.

AZ-400 Passleader Review: <https://www.actual4cert.com/AZ-400-real-questions.html>

As long as you have made a decision to buy our AZ-400 training material, you can receive an email attached with AZ-400 study questions in 5-10 minutes, and then you can immediately download the training material with no time wasted, If you don't pass your Microsoft AZ-400 exam, we will give you full refund, Here is exclusive Microsoft bundle deal, you can get all AZ-400 exam brain dumps now at discounted price.

How I Quit My Job to Travel the World, The Designing and Implementing Microsoft DevOps Solutions PDF practice material contains actual Microsoft AZ-400 exam questions compiled by certified experts around the globe to benefit candidates.

Pass Guaranteed Microsoft - AZ-400 - Accurate Free Designing and Implementing Microsoft DevOps Solutions Download Pdf

As long as you have made a decision to buy our AZ-400 Training Material, you can receive an email attached with AZ-400 study questions in 5-10 minutes, and then you can immediately download the training material with no time wasted.

If you don't pass your Microsoft AZ-400 exam, we will give you full refund, Here is exclusive Microsoft bundle deal, you can get all AZ-400 exam brain dumps now at discounted price.

But pass the exam is not easy, The second advantageous feature of the AZ-400 questions PDF document is the ability to print Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam dumps to avoid eye strain due to the usage of smart devices.
