Scaled Agile SAFe Release Train Engineer Sample Questions (Q217-Q222):

NEW QUESTION # 217

What are two anti-patterns for the IP Iteration? (Choose two.)

- A. To wait for the IP Iteration to fix defects
- B. To ensure all Stories and teams' PI plans are completed prior to the IP Iteration
- C. To allow for sufficient capacity in the Program Roadmap
- D. To plan work for the IP Iteration during P Planning
- E. To minimize lost capacity when people are on vacation or holidays

Answer: A,D

Explanation:

The IP Iteration in SAFe is designed to provide an estimating buffer for meeting PI Objectives and dedicated time for innovation, continuing education, PI Planning, and Inspect and Adapt (I&A) events¹. It is not intended for planning work or fixing defects that should have been addressed during the regular iterations.

* Option B is an anti-pattern because planning work for the IP Iteration during PI Planning can lead to overloading the IP Iteration with planned work, which contradicts its purpose as a buffer and time for innovation¹.

* Option D is an anti-pattern because waiting for the IP Iteration to fix defects can result in a bottleneck and delay in addressing issues that should be resolved promptly within the regular iteration cycles¹.

The IP Iteration should not be seen as a catch-all for unfinished work or deferred problem-solving but rather as an opportunity to innovate, learn, and prepare for the next PI.

NEW QUESTION # 218

When is one time a Scrum Master may be a participant rather than a facilitator?

- A. When using ad hoc teams for Inspect and Adapt
- B. If the entire team is present during the daily stand-up
- C. When the Agile Release Train does not require any team coordination
- D. During team breakout sessions at PI Planning

Answer: A

Explanation:

A Scrum Master may be a participant rather than a facilitator when using ad hoc teams for Inspect and Adapt.

In such situations, the Scrum Master might contribute directly to the activities and discussions, leveraging their expertise and insights to aid the ad hoc team's efforts in inspecting and adapting their processes and work products.

NEW QUESTION # 219

What is one action to support a Continuous Integration (CI) culture?

- A. Secure senior leadership support before starting CI
- B. Follow up with CI ceremonies
- C. Make integration results visible
- D. Purchase a CI tool

Answer: C

Explanation:

To support a Continuous Integration (CI) culture, one key action is to make integration results visible. This visibility is crucial as it allows all members of the Agile Release Train (ART) to see the progress and quality of the integration efforts in real-time. It helps in identifying integration issues early, which can be addressed promptly, thus maintaining a high quality of the codebase. Visibility of integration results also fosters a culture of collective responsibility for the product's quality and encourages collaboration among team members to achieve a potentially shippable product increment¹.

NEW QUESTION # 220

Which three attributes summarize DevOps? (Choose three.)

- A. A high performing DevOps team
- B. Strong organizational structure
- C. A set of technical practices
- D. Combined deployment and release
- E. A culture
- F. A mindset

Answer: C,E,F

Explanation:

DevOps is a combination of cultural philosophies, practices, and tools that increases an organization's ability to deliver applications and services at high velocity. According to the information available on the SAFe website, DevOps is summarized by the following three attributes:

* A Culture: DevOps represents a culture shift where product owners, development, QA, IT operations, and security work together towards a common goal, enabling fast flow of planned work into production while achieving stability, reliability, availability, and security.

* A Set of Technical Practices: It includes technical practices that support integration, automation, and collaboration needed to effectively develop and operate a solution, ensuring continuous delivery of value.

* A Mindset: DevOps is also a mindset that fosters a culture of collaboration and shared responsibility among the teams involved in the software development lifecycle, breaking down traditional silos and promoting a unified approach to achieving business goals. These attributes are essential for understanding the DevOps model as part of the Agile Product Delivery competency within the SAFe framework.

NEW QUESTION # 221

When is the Inspect and Adapt event held?

- A. After the System Demo
- B. At the end of every Iteration
- C. During the Program Increment (PI)
- **D. At the end of the Program Increment (PI)**

Answer: D
