Latest ANVE Braindumps Files, New ANVE Exam Pass4sure

Axis Network Video Exam (ANVE) Practice exams (desktop and web-based) are designed solely to help you get your Axis Network Video Exam (ANVE) certification on your first try. Our Axis ANVE mock test will help you understand the Axis Network Video Exam (ANVE) exam inside out and you will get better marks overall. It is only because you have practical experience of the Axis Network Video Exam (ANVE) exam even before the exam itself.

Prerequisites of Axis ANVE Certification Exam

Though candidates are not required to have any specific technical background, they must have a good understanding of network video technology. They should be familiar with the following subjects:

- Video compression and transmission
- Technical and physical security in integrated networks
- Hardware and software installation and configuration
- Network troubleshooting skills
- Data communication technologies

Axis Network Video Exam Sample Questions (Q292-Q297):

NEW QUESTION # 292

Which layer 4 protocol has less overhead information?

- A. HTTP
- B. TCP
- C. IP
- **D. UDP**

Answer: D

Explanation:

UDP (User Datagram Protocol) has less overhead information compared to TCP (Transmission Control Protocol). UDP is a simpler, connectionless protocol that does not require handshaking or error-checking mechanisms, resulting in lower overhead and faster transmission of data. This makes UDP more efficient for real-time applications such as video streaming, as detailed in Axis Communications' technical guides on network protocols.

NEW QUESTION # 293

The term f-stop, or f-number,

- A. Relates the focal length of the lens to the zoom factor.
- B. Measures the lens' capability to focus on objects at short distance.
- C. Is the end position of the focus motor in an autofocus system.
- **D. Measures the lens' capability to collect light.**

Answer: D

Explanation:

When dealing with a poorly lit scene, adding light is the most effective option to improve image quality.

Proper illumination ensures that the camera's sensor can capture clear and detailed images, reducing noise and enhancing visibility.

While adjusting exposure settings, brightness, or changing camera placement can help, they are secondary to the fundamental requirement of adequate lighting.

NEW QUESTION # 294

Which of the following conditions has to be met to use multicast streaming?

- A. The client has to support streaming over RTSP
- B. The client has to run AXIS Camera Management or AXIS Camera Station
- C. The video device needs to run on firmware version 5.20 or higher
- **D. The network infrastructure has to support multicast**

Answer: D

NEW QUESTION # 295

Match the best choice of camera to each scenario described. Drag each gray box from the left column to the matching blue box in the right column.

□

Answer:
