

Free JN0-232 Download Pdf - Reliable JN0-232 Test Braindumps

P.S. Free & New JN0-232 dumps are available on Google Drive shared by DumpsQuestion: <https://drive.google.com/open?id=1jjj4gpYmbKy7NivdXU9zRiWl1AtcyrLj>

In order to let users do not have such concerns, solemnly promise all users who purchase the JN0-232 latest exam torrents, the user after failed in the exam as long as to provide the corresponding certificate and failure scores scanning or screenshots of JN0-232 exam, we immediately give money refund to the user, and the process is simple, does not require users to wait too long a time. Of course, if you have any other questions, users can contact the customer service of JN0-232 Test Torrent online at any time, they will solve questions as soon as possible for the users, let users enjoy the high quality and efficiency refund services.

The Juniper JN0-232 certification exam is one of the best certification exams that offer a unique opportunity to advance beginners or experience a professional career. With the Security, Associate (JNCIA-SEC) JN0-232 exam everyone can validate their skills and knowledge easily and quickly. There are other several benefits that you can gain with the Security, Associate (JNCIA-SEC) JN0-232 Certification test. The prominent advantages of the JN0-232 certification exam are more career opportunities, proven skills, chances of instant promotion, more job roles, and becoming a member of the JN0-232 certification community.

Juniper JN0-232 PDF Questions - Most Effective Exam Preparation Method

Our website is a worldwide dumps leader that offers free valid JN0-232 dumps for certification tests, especially for Juniper test. We focus on the study of JN0-232 valid test for many years and enjoy a high reputation in IT field by laTest JN0-232 Valid vce, updated information and, most importantly, JN0-232 vce dumps with detailed answers and explanations.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q93-Q98):

NEW QUESTION # 93

What are two ways that an SRX Series device identifies content? (Choose two.)

- A. It identifies and inspects the file extension of each file.
- B. It identifies file types in HTTP, FTP, and e-mail protocols.
- C. It uses AppID.
- D. It uses ALGs.

Answer: B,C

Explanation:

SRX Series devices provide content security features that rely on advanced identification mechanisms. File identification is not based merely on file extensions (which can be easily spoofed), but instead on deep inspection techniques:

* AppID (Application Identification): AppID is part of the AppSecure suite, allowing the device to classify applications and content regardless of port or protocol. This enables the SRX to detect applications and their related content for enforcement.

* Protocol-based file type identification: The SRX can recognize and identify file types embedded within HTTP, FTP, and e-mail (SMTP, IMAP, POP3) protocols. This provides accurate content inspection and filtering, independent of file naming conventions.

* Why not the others?

* File extensions (Option A) are not reliable for content security, so SRX does not use them.

* ALGs (Option D) are used for protocol handling, such as SIP or FTP control channels, not for content identification.

NEW QUESTION # 94

Which two statements about the host-inbound-trafficparameter in a zone configuration are correct? (Choose two.)

- A. The host-inbound-trafficparameter is explicitly configured in a security zone.
- B. The host-inbound-trafficparameter is implicitly configured in the management zone.
- C. Deleting the host-inbound-trafficparameter blocks SSH access to the firewall.
- D. Deleting the host-inbound-trafficparameter blocks console access to the firewall.

Answer: A,C

Explanation:

Removing or not configuring the host-inbound-traffic parameter in a security zone will block management traffic (such as SSH, HTTPS, or ping) destined for the SRX firewall itself from interfaces in that zone.

The host-inbound-traffic parameter must be explicitly configured in each security zone to specify which protocols and services are allowed to reach the device's control plane.

NEW QUESTION # 95

Click the Exhibit button.

Referring to the exhibit, which statement is correct?

- A. policy1 will be shadowed because it matches the same application as policy3.
- B. None of the policies will be shadowed.
- C. policy2 will be shadowed because it matches the same application as policy1.
- D. policy3 will be shadowed because it matches the same application as policy1.

Answer: D

Explanation:

Juniper SRX evaluates security policies in order, top to bottom. The first matching policy determines the action, and no further policies are evaluated. This behavior can lead to shadowed policies if later policies match the same conditions as earlier ones.

From the exhibit:

* Policy1: Matches application junos-http and permits traffic.

* Policy2: Matches application junos-https and permits traffic.

* Policy3: Matches application junos-http again, but denies traffic.

Since policy1 already matches all HTTP traffic and permits it, traffic never reaches policy3. This makes policy3 shadowed because it has the same match condition as policy1 but is evaluated later in the list.

Other options:

* Policy1 is not shadowed because it is evaluated first.

* Policy2 is independent (application = HTTPS) and therefore unaffected.

* Only policy3 is shadowed by policy1.

Correct Statement: Policy3 will be shadowed because it matches the same application as policy1.

NEW QUESTION # 96

Which two statements are true about the NextGen Web Filtering (NGWF) feature on an SRX Series device? (Choose two.)

- A. The NGWF feature consults the Juniper cloud before consulting your local lists.
- B. The NGWF feature does not require a license.
- C. The NGWF feature requires a license.
- D. The NGWF feature consults your local lists before consulting the Juniper cloud.

Answer: C,D

Explanation:

* License Requirement (Option B):NextGen Web Filtering (NGWF) is a licensed feature on SRX devices. Without a license, the service cannot operate.

* Local vs. Cloud Lists (Option C):NGWF checkslocal block/allow lists first. If the URL does not match locally, the request is then checked against the Juniper cloud database.

* Option A:Incorrect, since the cloud is only consulted if the URL is not in the local list.

* Option D:Incorrect, as NGWF requires a valid subscription/license.

Correct Statements:NGWF requires a license, and it checks local lists before cloud lookup.

NEW QUESTION # 97

Which two statements are correct about NAT and security policy processing? (Choose two.)

- **A. The security policy is evaluated after destination NAT.**
- B. The security policy is evaluated before destination NAT.
- **C. The security policy is evaluated after source NAT.**
- D. The security policy is evaluated before source NAT.

Answer: A,C

Explanation:

The packet processing order in SRX with NAT and policies is:

* Destination NAT(applies first, for inbound traffic).

* Security Policy Evaluation(after destination NAT, before source NAT).

* Source NAT(applies last, for outbound traffic).

* Option A:Incorrect. Policies are not evaluated before destination NAT.

* Option B:Correct. Security policies are evaluatedbefore source NATbut after destination NAT. So in terms of order, policies are processed prior to source NAT.

* Option C:Incorrect. Policies are not evaluated before source NAT - they are evaluatedbefore source NAT is applied.

* Option D:Correct. Policies are evaluatedafter destination NAT.

Correct Statements:B and D
