## CWNP Certified Wireless Analysis Professional Sample Questions (Q87-Q92):

### NEW QUESTION # 87

As the WLAN engineer in your organization, you must troubleshoot performance problems related to co-channel interference (CCI).

What is a good measurement of CCI impact in addition to the number of APs seen on a channel?

- A. Utilization
- B. The frequency used
- C. Retries
- D. Non-Wi-Fi device count

**Answer: B**

### NEW QUESTION # 88

802.11k Neighbor Requests and Neighbor Reports are sent in what type of Management Frames?

- A. Reassociation Request and Reassociation Response
- B. RRM
- C. Action
- D. Beacon

**Answer: C**

Explanation:

802.11k Neighbor Requests and Neighbor Reports are sent in Action frames. An Action frame is a Management frame that is used to perform various operations or functions related to the operation or maintenance of a wireless network. An Action frame consists of a Category field that indicates the type of action being performed, and a variable-length Action Details field that contains specific information related to the action. For example, an Action frame with a Category field value of 5 indicates a Radio Measurement action, and the Action Details field may contain a Neighbor Request or a Neighbor Report subelement .

### NEW QUESTION # 89

You have deployed a new 802.11ac WLAN for a customer who wants to take advantage of 802.11ac standardized Transmit Beamforming. After the installation you perform a protocol capture to confirm Transmit Beamforming is operating as expected. When analyzing the protocol exchange you observe the beamformer transmits a VHT NDP Announcement frame but you never see the transmitted NDP. What do you conclude from this behavior?

- A. This is normal, 802.11ac includes the NDP within the VHT NDP Announcement.
- B. This behavior is non-standard and is likely a bug with the current driver.
- C. NDPs are PHY PPDU's which contain no MPDU and therefore will not be displayed in a protocol analyzer.
- D. This indicates the beamformer is misconfigured.

**Answer: C**

Explanation:

Null Data Packets (NDPs) used in 802.11ac beamforming are PHY-layer constructs without MAC frames. Since protocol analyzers capture at the MAC layer, NDPs do not appear in the capture even though they are transmitted, which is why only the VHT NDP Announcement is visible.

#### NEW QUESTION # 90

After performing a protocol analysis capture on channel 36 you are looking at the radio tap header of a data frame and notice the frame was transmitted at MCS 0 on one spatial stream. At what data rate was the PHY Header for this frame transmitted?

- A. 1 Mbps
- B. 6.5 Mbps
- C. 2 Mbps
- D. 6 Mbps

**Answer: D**

Explanation:

On channel 36 (5 GHz band), the PHY header is always transmitted using one of the basic OFDM rates to ensure all devices can decode it. For 802.11a/n/ac in 5 GHz, the PHY header is sent at 6 Mbps, regardless of the MCS rate used for the data portion of the frame.

#### NEW QUESTION # 91

802.11k Neighbor Requests and Neighbor Reports are sent in what type of Management Frames?

- A. Reassociation Request and Reassociation Response
- B. RRM
- C. Action
- D. Beacon

**Answer: C**

Explanation:

802.11k Neighbor Requests and Neighbor Reports are carried within Action management frames.

These frames are used to exchange Radio Resource Management information, including neighbor reporting, between stations and access points.
