## HPE Hybrid Cloud Solutions Sample Questions (Q58-Q63):

### NEW QUESTION # 58

You are preparing a proposal to refresh your customer's existing DL380 G6 and G7 servers with newer generations. Before making a decision, your customer needs to know if a refresh is worth the cost. Which option will show the value of the purchase to your customer?

- A. Smart CID
- B. Solution Sales Enablement Tool
- C. Selective Storage Presentation
- D. TCO/ROI Calculator

**Answer: D**

Explanation:

TCO/ROI Calculator: The Total Cost of Ownership (TCO) and Return on Investment (ROI) calculator provides a detailed financial analysis that compares the costs and benefits of maintaining existing servers versus investing in new hardware. It helps customers understand the long-term value and potential savings of upgrading to newer server generations.

### NEW QUESTION # 59

Match the preconfigured HPE workload Profile With Its definition.

**Answer:**

Explanation:

Explanation:

HPE workload profile is one of the HPE Intelligent System Tuning (IST) features and allows you to tune the resources in your HPE ProLiant server by choosing a preconfigured workload profile. The server will automatically configure the BIOS settings to match the selected workload<sup>12</sup>.

According to the information I found on the web, here is how you can match the preconfigured HPE workload profile with its definition:

General power efficient compute: This is a default out-of-the-box profile that uses the most common performance settings seen across most application workloads. It also enables power management settings that have minimal impact to overall performance. This profile is recommended for customers that do not typically tune their BIOS for their workload<sup>1</sup>.

IO throughput: This profile is intended for configurations that depend on maximum throughput between IO and memory. It disables power management settings that are known to have impact on maximum achievable bandwidth. It also applies settings that benefit NUMA awareness, as best throughput is achieved when the workload is also NUMA aware and optimized<sup>1</sup>.

Graphics processing: This profile is intended for configurations that use GPUs and depend on maximum bandwidth between IO and memory. It disables power management settings that are known to have impact on maximum achievable bandwidth. It also applies settings that benefit NUMA awareness, as best throughput is achieved when the workload is also NUMA aware and optimized<sup>1</sup>.

Virtualization -Max Performance: This profile setting will ensure that all available virtualization technologies are enabled and configured for maximum performance. It disables power management settings in favor of delivering maximum performance. Certain virtualization technologies can have possible performance impacts to nonvirtualized environments and can be disabled in other profiles

### NEW QUESTION # 60

Your customer has a small office with five employees and needs a tower server for a File & Print workload. Which server series should they use?

- A. MLSeries
- B. Apollo Series
- C. DL Series
- D. Synergy Series

**Answer: A**

Explanation:

ML Series: The HPE ProLiant ML series servers are designed as tower servers, making them ideal for small offices. They offer the necessary performance and scalability for File & Print workloads while being easy to manage and deploy in a small office environment.

#### NEW QUESTION # 61

Due to recent ransomware attacks, your customer wants an air-gapped system to archive their 400TB of client data and store it for 10 years. Which product is the most cost-effective solution for their archiving needs?

- A. StoreEasy 1660
- **B. MSL2024**
- C. MSA 2062
- D. MSL6480

**Answer: B**

Explanation:

The HPE MSL2024 Tape Library is designed for small to medium-sized businesses that need affordable, reliable data protection and long-term archiving.

It offers scalability and can handle the archiving needs of 400TB of data with the appropriate number of tape cartridges.

Tape storage is an effective method for air-gapped systems because tapes can be physically separated from the network, providing protection against ransomware and other cyber threats.
