NVIDIA-Certified-Professional Accelerated Data Science Sample Questions (Q300-Q305):

NEW QUESTION # 300

In a typical MLOps pipeline, which of the following practices are essential to ensuring robust deployment and monitoring of machine learning models in production? (Select two)

- A. Automated hyperparameter tuning during inference to optimize model performance.
- B. Post-deployment data drift detection to assess model performance degradation.
- C. Continuous integration and continuous deployment (CI/CD) pipelines for model updates.
- D. Use of manual intervention for every model update to ensure accuracy.

Answer: B,C

NEW QUESTION # 301

A data engineer is preparing a dataset for training a deep learning model. The dataset contains numerical features with missing values, outliers, and inconsistent units.

Which of the following strategies is the most appropriate for ensuring a standardized and clean dataset?

- A. Use the median to fill missing values, convert all numerical values into categorical bins, and apply Min-Max scaling.
- B. Remove all rows with missing values and outliers to ensure only clean data is used.
- C. Standardize the dataset using the mean and standard deviation, but keep missing values and outliers unchanged to avoid data manipulation.
- D. Replace missing values with the mean, apply z-score normalization, and clip extreme outliers based on a threshold (e.g., 3 standard deviations).

Answer: D

NEW QUESTION # 302

A data scientist wants to compare the performance of two different GPU-accelerated data science frameworks, NVIDIA RAPIDS (cuDF, cuML) and TensorFlow, for a tabular data classification task.

Which of the following approaches would be the best practice for designing an unbiased and effective benchmark?

- A. Use TensorFlow's built-in training time metrics without comparing equivalent RAPIDS-based operations.
- B. Run all benchmarks on a CPU to ensure fairness across frameworks.
- C. Measure execution time and memory usage for each framework using NVIDIA Nsight Systems (nsys).
- D. Ignore preprocessing and focus only on model training speed when comparing performance.

Answer: C

NEW QUESTION # 303

You are building a fraud detection system and have a dataset that includes a feature representing transaction amounts. The values range from a few cents to several thousand dollars.

What is the most appropriate data type for this feature?

- A. Integer (rounding all transaction amounts to whole dollars).
- B. Boolean (True for transactions above \$100, False otherwise).
- C. Categorical (grouping transactions into bins such as "low", "medium", "high").
- D. Floating-point (with precision to store cents or fractions of a cent).

Answer: D

NEW QUESTION # 304

You are building an MLOps pipeline for a predictive model that uses tabular data with both categorical and numerical features. To ensure efficient data processing and optimal model training on an NVIDIA GPU, which of the following data types would be most suitable for a categorical feature representing different product categories?

- A. String
- B. Float64
- C. Int64

- **D. Int32**

Answer: D
