

# NSK300 Pass4sure Questions & NSK300 Actual Test & NSK300 Practice Training

2026 Latest ITExamReview NSK300 PDF Dumps and NSK300 Exam Engine Free Share: <https://drive.google.com/open?id=1Z0qHt3EUvztU304ublai8mpjAQAfjVWj>

Every Netskope aspirant wants to pass the Netskope NSK300 exam to achieve high-paying jobs and promotions. The biggest issue NSK300 exam applicants face is that they don't find credible platforms to buy real NSK300 exam dumps. When candidates don't locate actual Netskope Certified Cloud Security Architect (NSK300) exam questions they prepare from outdated material and ultimately lose resources. If you are also facing the same problem then you are at the trusted spot.

These Netskope Certified Cloud Security Architect (NSK300) practice test questions are customizable and give real Netskope Certified Cloud Security Architect (NSK300) exam experience. Windows computers support desktop software. The web-based NSK300 Practice Exam is supported by all browsers and operating systems.

## NSK300 Reliable Exam Preparation - NSK300 Valid Exam Topics

We often ask, what is the purpose of learning? Why should we study? Why did you study for NSK300 exam so long? As many people think that, even if one day we forget the formula for the area of a triangle, we can still live very well, but if it were not for the knowledge of learning NSK300 Exam and try to obtain certification, how can we have the opportunity to good to future life? So, the examination is necessary, only to get the test NSK300 certification, get a certificate, to prove better us, to pave the way for our future life.

### Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Management:</b> This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Cloud Security Solutions:</b> This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Monitoring:</b> This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.</li> </ul>

## Netskope Certified Cloud Security Architect Sample Questions (Q48-Q53):

### NEW QUESTION # 48

Your company has a large number of medical forms that are allowed to exit the company when they are blank. If the forms contain sensitive data, the forms must not leave any company data centers, managed devices, or approved cloud environments. You want to create DLP rules for these forms.

Which first step should you take to protect these forms?

- A. Use Netskope Secure Forwarder to create EDM hashes of all forms.
- B. Use Netskope Secure Forwarder to create an MIP tag for all forms.
- C. Use Netskope Secure Forwarder to create an ML Model of all forms
- **D. Use Netskope Secure Forwarder to create fingerprints of all forms.**

**Answer: D**

Explanation:

The first step to protect the medical forms containing sensitive data is to create fingerprints of all forms using Netskope Secure Forwarder. Fingerprints are unique identifiers that can be used to detect when a form contains sensitive data. By creating fingerprints, you can set up DLP (Data Loss Prevention) rules that will allow blank forms to exit the company but will prevent forms with sensitive data from leaving the protected environments. This method ensures that only forms without sensitive information are allowed to be shared externally.

### NEW QUESTION # 49

You successfully configured Advanced Analytics to identify policy violation trends. Upon further investigation, you notice that the activity is NULL. Why is this happening in this scenario?

- A. The SSPM policy was not configured during setup.
- B. A policy violation was identified using API Protection.
- **C. A user accessed a static Web page.**
- D. The REST API v1 token has expired.

**Answer: C**

Explanation:

The reason for the activity being NULL in this scenario is likely because a user accessed a static Web page. In Netskope's Advanced Analytics, when the activity is reported as NULL, it often indicates that there was no dynamic interaction or transaction to record, which is typical when a static web page is accessed. Static web pages do not generate the kind of events or activities that are tracked by policies, hence they appear as NULL in the activity field.

### NEW QUESTION # 50

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. the impact of threat scanning performance
- B. cipher support on tunnel-initiating devices
- C. Netskope Client behavior when on-premises
- D. bandwidth considerations
- E. the categories to be blocked

**Answer: B,C,D**

### NEW QUESTION # 51

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs.

How would you accomplish this task?

- A. Use IPsec tunnels from the AWS Virtual Private Gateway.
- B. Use GRE tunnels from the AWS Transit Gateway.
- C. Use IPsec tunnels from the AWS Transit Gateway.
- D. Use GRE tunnels from the AWS Virtual Private Gateway

**Answer: C**

Explanation:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required<sup>12</sup>. The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP<sup>1</sup>.

### NEW QUESTION # 52

You have enabled CASB traffic steering using the Netskope Client, but have not yet enabled a Real-time Protection policy. What is the default behavior of the traffic in this scenario?

- A. Traffic will be blocked and logged.
- B. Traffic will be allowed, but not logged.
- C. Traffic will be blocked, but not logged.
- D. Traffic will be allowed and logged.

**Answer: D**

Explanation:

In the scenario where CASB traffic steering is enabled using the Netskope Client without a Real-time Protection policy being activated, the default behavior of the traffic is to allow and log it (B). This means that the traffic will not be blocked; instead, it will be permitted to pass through and will be recorded for monitoring and analysis purposes. This default setting ensures visibility into the traffic and user activities without immediately enforcing a block, allowing for a period of observation and policy tuning before potentially more restrictive actions are taken<sup>1</sup>.

The default behavior of traffic steering in Netskope, including the logging of allowed traffic, is detailed in Netskope's best practices and community discussions on Real-time Protection policies<sup>1</sup>.

### NEW QUESTION # 53

.....

Under the support of our study materials, passing the exam won't be an unreachable mission. More detailed information is under
