Pass Guaranteed 2026 Accurate ASET-Ethics-Examination: Minimum ASET Ethics Examination-ASET Professional Practice Exam (PPE) Pass Score

We talked with a lot of users about ASET-Ethics-Examination practice engine, so we are very clear what you want. You know that the users of ASET-Ethics-Examination training materials come from all over the world. The quality of our products is of course in line with the standards of various countries. You will find that the update of ASET-Ethics-Examination learning quiz is very fast. You don't have to buy all sorts of information in order to learn more. ASET-Ethics-Examination training materials can meet all your needs. What are you waiting for?

ASET Ethics Examination-ASET Professional Practice Exam (PPE) Sample Questions (Q80-Q85):

NEW QUESTION # 80

An accident occurs at a work site supervised by a regulated member of ASET. Which of the following is the first course of action the member should take?

- A. Protect any property that is at risk of damage.
- **B. Assess and attend to any injured persons.**
- C. Start an investigation into the accident.
- D. Report the accident.

Answer: B

Explanation:

When an emergency or accident occurs on a work site, chaos and confusion are common, making it vital for professional supervisors to follow a strict hierarchy of response priorities. Both the ASET Code of Ethics and fundamental Occupational Health and Safety (OHS) principles dictate that the preservation of human life and health is the absolute highest priority, superseding all other concerns.

Therefore, the immediate first course of action must always be to assess the scene for ongoing danger and attend to any injured persons (e.g., administering first aid, calling 911, and ensuring the injured are safely evacuated if necessary). Only after the immediate physical safety and medical needs of personnel have been addressed should the member move to secondary and tertiary priorities: protecting property (Option D), securing the site for evidence, initiating a formal investigation (Option B), and reporting the incident to regulatory authorities and management (Option A). Delaying medical attention to file paperwork or protect machinery is a gross violation of professional ethics.

NEW QUESTION # 81

The operations manager in an oil exploration company insists on purchasing expensive electronic equipment for oil and gas exploration, even though the engineering technologist knows the equipment is outdated and has advised the manager against buying it. The manager wants to buy it because of favourable exchange rates.

Which of the following should the engineering technologist do?

- A. Set up a meeting with the company shareholders to discuss the advice and the consequences of ignoring the advice.
- **B. In writing, explain the advice to the client, clearly outlining the consequences of ignoring the advice.**
- C. Ask to speak to senior management to explain the advice and the consequences of ignoring the advice.
- D. Ask to speak to the client in person to explain the advice and outline the consequences of ignoring the advice.

Answer: B

NEW QUESTION # 82

A regulated member of ASET is the manager in charge of the design and construction of a new chemical processing unit. During the course of work, the member suggests to the project contractor an alteration to the design that considerably improves safety. After the suggestion has been successfully implemented, the member is offered an expensive bottle of whiskey. Which of the following actions should the member take in this situation?

- A. Confirm with the member's employer whether the gift can be accepted.
- B. Accept the gift from the project contractor.
- **C. Reject the gift from the project contractor.**
- D. Report the project contractor to ASET.

Answer: C

Explanation:

Under the ASET Code of Ethics, regulated members must avoid conflicts of interest and maintain their professional independence and integrity. Accepting gifts, especially items of significant value like an expensive bottle of alcohol from a contractor, creates a strong perception of bias or favoritism, even if the gift is offered after a successful safety suggestion has already been implemented. This situation falls under the ethical obligation to act with integrity and avoid situations that could compromise, or appear to compromise, the member's professional judgment. If the manager accepts the gift, it might create an unspoken psychological obligation to favor that contractor in future bids or project decisions, which would be unethical and potentially detrimental to the employer or the public interest. While corporate gift policies vary, the safest and most ethically sound course of action for a professional technologist is to politely reject the gift, explaining that professional ethical guidelines prohibit the acceptance of personal rewards from contractors or vendors. This preserves professional boundaries and ensures objective decision-making.

NEW QUESTION # 83

Which of the following materials or products are protected under copyright law?

- A. New devices, machines, processes, or compositions
- B. Configurations in integrated electronic circuits
- **C. Original literature and works of art**
- D. Logos, symbols, slogans, and designs

Answer: C

Explanation:

Intellectual property (IP) law in Canada is divided into several distinct categories, each designed to protect different types of creations. Copyright law specifically protects original literary, artistic, musical, and dramatic works. In an engineering technology context, this includes technical manuals, written reports, software code, architectural drawings, and original training materials. Copyright is automatic upon creation and prevents unauthorized copying, publishing, or performance of the work.

The other options fall under different IP protections: logos, symbols, and slogans are protected by Trademark law (to distinguish a company's brand in the marketplace); configurations of electronic circuits are protected by the Integrated Circuit Topography Act; and new, useful, and non-obvious devices, machines, or manufacturing processes are protected by Patent law. Understanding these distinctions is critical for ASET professionals to ensure they properly protect their employers' IP and do not inadvertently infringe on the intellectual property rights of competitors or third parties.

NEW QUESTION # 84

How many days does a rejected applicant have to submit a notice of appeal on the ASET Registrar?

- A. 10 days
- B. 60 days
- **C. 30 days**
- D. 15 days

Answer: C

Explanation:

Administrative fairness and natural justice are core tenets of the regulatory framework established by the Engineering and Geoscience Professions Act (EGPA). When an applicant applies for a protected designation (such as C.Tech. or C.E.T.) and the Board of Examiners rejects their application—perhaps due to insufficient experience or academic deficiencies—the applicant has the legal right to challenge that decision. However, this right is governed by strict statutory timelines to ensure administrative efficiency and finality. According to the legislation, a rejected applicant must serve a formal, written notice of appeal on the ASET Registrar within 30 days from the date they receive the official notice of rejection. If the applicant fails to submit their appeal within this 30-day window, the decision of the Board of Examiners becomes final and binding, and the applicant forfeits their right to have the decision reviewed by the Appeal Board during that application cycle.

NEW QUESTION # 85
