Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Process Automation: This section of the exam measures skills of Salesforce Consultant and covers choosing the right automation tools to solve complex business problems. It focuses on understanding the capabilities and limitations of declarative tools, identifying the right troubleshooting methods, and applying automation correctly within Salesforce's order of execution. This section emphasizes designing efficient, scalable automation using workflow tools, flows, and other declarative features.

Topic 2	<ul style="list-style-type: none"> Objects and Applications: This section of the exam measures the skills of a Salesforce Business Analyst and covers selecting appropriate object and application-level solutions to meet business needs. It focuses on identifying when to use master-detail relationships, lookups, junction objects, related lists, record types, Schema Builder, and Object Creator. The section also includes improving UI and user experience using App Manager, Lightning App Builder, Dynamic Forms, standard Lightning components, console apps, and tools like the Lightning page analyze button.
Topic 3	<ul style="list-style-type: none"> Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.

Pass Guaranteed Quiz Plat-Admn-301 - Pass-Sure Salesforce Certified Platform Administrator II Official Cert Guide

As everybody knows, the most crucial matter is the quality of Salesforce Certified Platform Administrator II study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best Plat-Admn-301 exam questions for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest Plat-Admn-301 Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the Plat-Admn-301 test guide is written by lots of past materials' rigorous analyses. Only with strict study, we write the latest and the specialized study materials. We can say that our Plat-Admn-301 exam questions are the most suitable for examinee to pass the exam.

Salesforce Certified Platform Administrator II Sample Questions (Q170-Q175):

NEW QUESTION # 170

Cloud Kicks (CK) completed a project in a sandbox environment and wants to migrate the changes to production. CK split the deployment into two distinct change sets. Change set 1 has new custom objects and fields. Change set 2 has updated profiles and automation.

What should the administrator consider before deploying the change sets?

- A. Automations need to be deployed in the same change set in order to be activated.
- B. Change set 2 needs to be deployed first.
- C. The Field-Level Security will not be deployed with the profiles in change set 2.**
- D. Both change sets must be deployed simultaneously.

Answer: C

Explanation:

When deploying profiles using change sets, the field-level security settings are not included unless the fields themselves are also part of the change set. Therefore, the administrator should consider adding the new custom fields to change set 2 along with the profiles, or manually adjust the field-level security after deployment. References: https://help.salesforce.com/articleView?id=changesets_about_components.htm&type=5

When deploying profiles using change sets, the field-level security settings are not included unless the fields themselves are also part of the change set. Therefore, the administrator should consider adding the new custom fields to change set 2 along with the profiles, or manually adjust the field-level security after deployment. References: https://help.salesforce.com/articleView?id=changesets_about_components.htm&type=5

NEW QUESTION # 171

How should an administrator ensure the appropriate number of digits are entered into the custom encrypted field created to capture credit card numbers on the Opportunity object?

- A. Use the credit card number mask type.
- B. Enter the number of digits at the field level.
- C. Define the number of mask characters.

- D. Create a validation rule to ensure the length.

Answer: D

Explanation:

A validation rule is a formula that validates the data entered by a user and prevents the record from being saved if the data does not meet certain criteria. In this case, the administrator can create a validation rule to ensure that the custom encrypted field for credit card numbers has exactly 16 digits. The other options are not applicable for encrypted fields. References:

https://help.salesforce.com/s/articleView?id=sf.validation_rules.htm&type=5

NEW QUESTION # 172

The administrator at Cloud Kicks has been asked to delete a large number of quote line items. The administrator receives a CSV file with the record IDs to be deleted. The administrator uses Data Loader to delete them and selects Use Bulk API. When the job runs, every record shows an 'entity is deleted' error in the error file that is created. What is the reason for the error?

- A. One of the IDs in the batch referenced a record that was in the recycle bin.
- B. The batch size selected was greater than the 200 record limit.
- C. This is the standard error message when records are deleted using Bulk API.
- D. Deleting with Data Loader can only be done in Batch API mode.

Answer: A

Explanation:

One of the IDs in the batch referenced a record that was in the recycle bin because deleting records with Bulk API does not delete records permanently but moves them to the recycle bin. Therefore, if a record ID in the batch matches an existing record ID in the recycle bin, an 'entity is deleted' error will occur.

NEW QUESTION # 173

DreamHouse Realty (DR) wants to ensure that its data is protected. There have been several recent attempts to phish employees. What should DR do to help ensure that the user that is logged in is the right user when the running user is trying to view reports and dashboards?

- A. Require a high assurance session when exporting or printing reports and dashboards.
- B. Set up an authentication provider for reports and dashboards.
- C. Require a Username, Password, and Security Token when logging in.
- D. Require MFA when users need to view and export dashboards and reports.

Answer: A

Explanation:

To help ensure that users who are viewing reports and dashboards are who they say they are, DR should require a high assurance session when exporting or printing reports and dashboards. A high assurance session requires users to verify their identity using multi-factor authentication before accessing sensitive data or functionality in Salesforce. References:

https://help.salesforce.com/s/articleView?id=sf.security_high_assurance_session_level.htm&type=5

NEW QUESTION # 174

At Ursa Major Solar, there is a custom object called Galaxy. The sales director wants users to only see certain field markets. What Lightning will satisfy this requirement?

- A. Path Component
- B. Fields component
- C. Highlights Panel Component
- D. Record Detail Component

Answer: B

Explanation:

The Fields component is a Lightning component that allows administrators to display fields from a record on a Lightning page based on certain conditions or criteria. For example, administrators can use filter logic to show or hide fields based on field values or user profiles. In this case, the administrator can use the Fields component to display fields that only apply to condos based on the value of a field that indicates the type of property. References: https://help.salesforce.com/s/articleView?id=sf.lightning_app_builder_fields.htm&type=5

NEW QUESTION # 175
