NEW QUESTION # 142

Two enterprise networks must be connected together. Both networks are using the same private IP addresses. The client requests from both sides should be translated using hide NAT (dynamic NAT) with the overload feature to save IP addresses from the NAT pools.

Which design addresses this requirement using only one Cisco IOS NAT router for both directions?

- A. The Nat Virtual interface must be used to achieve this requirement.
- B. This is not possible, because two Cisco IOS NAT routers are required to do dynamic NAT, with overload in both directions.
- C. The overload feature is the default and does not have to be configured.
- D. The ip nat inside and ip nat outside commands must be configured at the interfaces with the overload option in both directions.
- E. Two different NAT pools must be used for the ip nat inside source and the ip nat outside source commands for the overload feature in both directions.
