Reliable SAFe-Practitioner Test Price - Valid Dumps SAFe-Practitioner Book

If you want to ace the SAFe Practitioner Exam (6.0) (SAFe-Practitioner) test, the main problem you may face is not finding updated SAFe-Practitioner practice questions to crack this test quickly. After examining the situation, the Pass4SureQuiz has come with the idea to provide you with updated and actual Scrum SAFe-Practitioner Exam Dumps so you can pass SAFe Practitioner Exam (6.0) (SAFe-Practitioner) test on the first attempt. The product of Pass4SureQuiz has many different premium features that help you use this product with ease. The study material has been made and updated after consulting with a lot of professionals and getting customers' reviews.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q179-Q184):

NEW QUESTION # 179

What is one key benefit of a backlog refinement session?

- A. It provides time to identify dependencies and issues that could impact the next Iteration
- B. It allows the team to state the problem and think about what, where, when, and the impact
- C. It serves a variety of purposes, including a dedicated time for planning, retrospecting, exploring, and innovating
- D. It is the main way in SAFe for achieving relentless improvement

Answer: A

Explanation:

n: A backlog refinement session is a periodic activity teams use to define, discuss, estimate, and establish acceptance criteria for upcoming backlog items¹. One key benefit of a backlog refinement session is that it provides time to identify dependencies and issues that could impact the next iteration. By doing so, teams can reduce uncertainty, avoid surprises, and plan more effectively. Backlog refinement also helps surface problems with the current plan, which may require discussion at the team, PO, or coach syncs². Additionally, backlog refinement helps teams align their backlog with the ART backlog, the PI objectives, and the customer needs². NEW QUESTION # 180

The Business can change priorities during the Iteration

- A. TRUE
- **B. FALSE**

Answer: B

NEW QUESTION # 181

When is the System Demo conducted during program execution?

- A. When the System Team is ready
- **B. At the end of every Iteration**
- C. Only when all the stakeholders are available
- D. Each week

Answer: B

Explanation:

System Demo is a critical event that provides stakeholders an integrated view of the new features delivered by the Agile Release Train (ART) over the past iteration. It offers the ART a fact-based measure of current, system-level progress within the Program Increment (PI). It also enables fast feedback and learning cycles, which help the ART build the right solution and improve quality. The System Demo takes place as close to the end of the iteration as possible, ideally the next day. It requires implementing the scalable engineering practices necessary to support Continuous Integration across the ART¹². NEW QUESTION # 182

Which from the below are typical measures of a cumulative flow diagram?

- **A. WIP limits**
- **B. Lead time**
- **C. Throughput**
- D. Business value

Answer: A,B,C

NEW QUESTION # 183

Which component of the Continuous Delivery Pipeline is the ability to make value available to customers all at once, or in a staggered fashion based market and business needs?

- A. Continuous Deployment
- B. Continuous Integration
- **C. Release On Demand**
- D. Continuous Exploration

Answer: C
