## Valid CLF-C02 Test Cram & CLF-C02 New Braindumps Pdf

Many job-hunters want to gain the competition advantages and become the hottest people which the companies rush to get. But if they want to realize that they must boost some valuable CLF-C02 certificate to raise their values and positions. The CLF-C02 certificate enjoys a high reputation among the labor market circle and is widely recognized as the proof of excellent talents and if you are one of them and you want to pass the test smoothly you can choose our CLF-C02 Practice Questions.

## Amazon AWS Certified Cloud Practitioner Sample Questions (Q485-Q490):

### NEW QUESTION # 485

Which benefit does AWS offer exclusively to users who have an AWS Enterprise Support plan?

- A. Access to a solutions architect  
A company wants to automatically set up and govern a multi-account AWS environment.
- **B. Access to a technical account manager (TAM)**
- C. Access to a cloud support engineer
- D. Access to a technical project manager

**Answer: B**

Explanation:

AWS Enterprise Support plan is the highest level of support that AWS offers to its customers. One of the exclusive benefits of this plan is the access to a technical account manager (TAM), who is a dedicated point of contact for guidance, advocacy, and support<sup>2</sup>. A technical project manager, a cloud support engineer, and a solutions architect are not exclusive benefits of the AWS Enterprise Support plan, as they are also available to customers with lower-tier support plans or through other AWS services or programs<sup>345</sup>.

### NEW QUESTION # 486

A company wants to monitor for misconfigured security groups that are allowing unrestricted access to specific ports. Which AWS service will meet this requirement?

- A. Amazon CloudWatch
- B. Amazon GuardDuty
- C. AWS Health Dashboard
- **D. AWS Trusted Advisor**

**Answer: D**

Explanation:

AWS Trusted Advisor is an online tool that provides you real time guidance to help you provision your resources following AWS best practices, including security and performance. It can help you monitor for misconfigured security groups that are allowing unrestricted access to specific ports. Amazon CloudWatch is a service that monitors your AWS resources and the applications you run on AWS. Amazon GuardDuty is a threat detection service that continuously monitors for malicious activity and unauthorized behavior. AWS Health Dashboard provides relevant and timely information to help you manage events in progress, and provides proactive notification to help you plan for scheduled activities.

### NEW QUESTION # 487

Which design principles are included in the reliability pillar of the AWS Well-Architected Framework?  
(Select TWO.)

- **A. Stop guessing capacity.**
- B. Grant everyone access to increase AWS service quotas.
- **C. Automatically recover from failure.**
- D. Design applications to run in a single Availability Zone.
- E. Plan to increase AWS service quotas first in a secondary AWS Region.

**Answer: A,C**

Explanation:

The reliability pillar of the AWS Well-Architected Framework emphasizes building systems that can recover from failures and dynamically adjust to meet demand. This includes designing to automatically recover from failures and implementing mechanisms to manage capacity demands, avoiding manual guesswork. The other options do not align with core reliability principles, as operating in a single Availability Zone or preemptively adjusting quotas in a secondary region does not inherently improve reliability.

### NEW QUESTION # 488

Which AWS service or tool can be used to capture information about inbound and outbound traffic in an Amazon VPC?

- A. VPC endpoint services
- B. Amazon Inspector
- **C. VPC Flow Logs**
- D. NAT gateway

**Answer: C**

### NEW QUESTION # 489

An ecommerce company wants to use Amazon EC2 Auto Scaling to add and remove EC2 instances based on CPU utilization. Which AWS service or feature can initiate an Amazon EC2 Auto Scaling action to achieve this goal?

- **A. Amazon CloudWatch alarm**
- B. Amazon Simple Notification Service (Amazon SNS)
- C. AWS Systems Manager
- D. Amazon Simple Queue Service (Amazon SQS)

**Answer: A**

Explanation:

Amazon CloudWatch alarm is an AWS service or feature that can initiate an Amazon EC2 Auto Scaling action based on CPU utilization. Amazon CloudWatch is a monitoring and observability service that collects and tracks metrics, logs, events, and alarms for your AWS resources and applications. Amazon CloudWatch alarms are actions that you can configure to send notifications or automatically make changes to the resources you are monitoring based on rules that you define<sup>67</sup>.

Amazon EC2 Auto Scaling is a service that helps you maintain application availability and allows you to automatically add or remove EC2 instances according to definable conditions. You can create dynamic scaling policies that track a specific CloudWatch metric, such as CPU utilization, and define what action to take when the associated CloudWatch alarm is in ALARM. When the policy is in effect, Amazon EC2 Auto Scaling adjusts the group's desired capacity up or down when the threshold of an alarm is breached<sup>89</sup>.
