Topic 4	<ul style="list-style-type: none">• Information Mapping: The topic is all about applying information mapping when developing a TOGAF Business Architecture.

The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q55-Q60):

NEW QUESTION # 55

Complete the sentence. The TOGAF standard covers the development of four architecture domains. Business, Data, Technology and _____.

- A. Application
- B. Segment
- C. Capability
- D. Transition

Answer: A

Explanation:

The TOGAF standard covers the development of four architecture domains: Business, Data, Technology, and Application. The Application Architecture domain defines the applications required to process the data and support the business functions.

The TOGAF standard describes the development of four architecture domains, which are considered its pillars. These are Business, Data, Technology, and Application. The Application Architecture domain provides a blueprint for the individual application systems to be deployed, their interactions, and their relationships to the core business processes of the organization.

NEW QUESTION # 56

Which of the following is a purpose of mapping capabilities to value stream stages?

- A. To provide a self-contained business description that is independent of the organizational structure.
- B. To describe the business in terms of services provided and consumed.
- C. To classify, group, and align capabilities into categories for a deeper understanding.
- D. To identify and eliminate business capabilities that do not contribute to the business.

Answer: D

Explanation:

The purpose of this activity is to identify which business capabilities (out of the total set of capabilities) are critical to delivering

stakeholder value, and therefore which ones need to be performed to a sufficient standard of quality to meet stakeholder expectations. It also helps to identify those business capabilities that do not contribute toward any of the core value streams, and which may be eliminated from the business.

The primary purpose of mapping capabilities to value stream stages within the TOGAF framework is to analyze how each capability contributes to delivering value to the customer. This process helps to identify:

* Capabilities essential for value creation: These are the capabilities that directly contribute to the activities within the value stream and are critical for delivering customer value.

* Capabilities with indirect or unclear contributions: These may require further investigation to determine their role in the value stream.

* Non-contributing capabilities: These capabilities do not play a role in the value stream and may be candidates for elimination or optimization to improve efficiency and reduce costs.

NEW QUESTION # 57

In the ADM, what is the name for a document deliverable that has completed a review and is approved?

- A. approved
- **B. ratified**
- C. version 0.9
- D. final

Answer: B

NEW QUESTION # 58

Consider the following example value stream:

□ What does this show?

- A. The value stream consists of five business capabilities.
- **B. A decomposition into a sequence of value-creating stages.**
- C. The service "Acquire Retail Product" consists of five events
- D. A series of five subprocesses that makeup the value stream

Answer: B

Explanation:

The example value stream shown, labeled "Acquire Retail Product," represents a decomposition into a sequence of stages that collectively create value. Each stage, such as "Advertise Channels," "Display Products," "Enable Selection," "Process Payment," and "Deliver Product(s)," is a step in the overall process that contributes to the final outcome, which in this case is the acquisition of a retail product by the customer.

Value streams are utilized in business architecture to model the flow of value through an organization from the initial customer demand to the final delivery of the product or service.

NEW QUESTION # 59

What are the four architecture domains that the TOGAF standard deals with?

- A. Application, Data, Information, Knowledge
- **B. Business, Data, Application, Technology**
- C. Capability, Segment, Enterprise, Federated
- D. Baseline, Candidate, Transition, Target

Answer: B

Explanation:

TOGAF defines four core architecture domains: Business, Data, Application, and Technology. These domains collectively represent the key areas covered in enterprise architecture, where the Business Architecture defines business strategy and organizational goals; Data Architecture addresses data management and structure; Application Architecture focuses on system and software applications; and Technology Architecture outlines the IT infrastructure.

References: TOGAF Standard, Architecture Domains (Chapter 3).

TOGAF, as a comprehensive Enterprise Architecture framework, divides the architecture landscape into four interrelated domains:

- * Business Architecture: This domain focuses on the organization's strategic goals, business processes, and organizational structure. It defines how the business operates and creates value.
 - * Data Architecture: This domain deals with the structure, organization, and management of data assets within the enterprise. It includes logical and physical data models, data storage, and data security.
 - * Application Architecture: This domain describes the applications used to support the business, their interactions, and their alignment with business processes. It provides a blueprint for the application portfolio.
 - * Technology Architecture: This domain covers the technology infrastructure that supports the applications and data. It includes hardware, software, networks, and IT services.
- These four domains provide a holistic view of the enterprise and how its different components work together.

NEW QUESTION # 60
