Google-Workspace-Administrator Dumps - Google-Workspace-Administrator Examsfragen

Die Schulungsunterlagen zur Google Google-Workspace-Administrator Zertifizierungsprüfung aus Zertprüfung sind nicht nur echt, sondern auch preiswert. Nach dem Kauf unserer Prüfungsmaterialien werden Sie einjährige Aktualisierung genießen. Sie können einen Teil von den kostenlosen originalen Fragen herunterladen, bevor Sie die Schulungsunterlagen zur Google Google-Workspace-Administrator Zertifizierungsprüfung aus Zertprüfung kaufen. Wenn Sie die Google Google-Workspace-Administrator Prüfung nicht bestehen oder die Schulungsunterlagen zur Google Google-Workspace-Administrator Zertifizierungsprüfung irgend ein Problem haben, geben wir Ihnen eine bedingungslose volle Rückerstattung.

Google Cloud Certified - Professional Google Workspace Administrator Google-Workspace-Administrator Prüfungsfragen mit Lösungen (Q53-Q58):

53. Frage

An employee at your organization may be sharing confidential documents with unauthorized external parties. You must quickly determine if any sensitive information has been leaked. What should you do?

- A. Create a custom report of the user's external sharing by using the security dashboard.
- **B. Review the employee's Drive log events in the security investigation tool.**
- C. Review the employee's user log events within the security investigation tool.
- D. Audit Drive access by using the Admin SDK Reports API.

Antwort: B

Begründung:

To quickly determine if an employee has shared confidential documents externally, you should utilize the security investigation tool in the Google Admin console and specifically review the Drive log events associated with that employee's account. This tool provides a centralized place to audit user activity related to Google Drive, including sharing actions.

Here's why option A is the most direct and efficient first step:

A . Review the employee's Drive log events in the security investigation tool.

The security investigation tool allows administrators to examine various logs related to user activity and potential security incidents. By focusing on the Drive log events for the specific employee in question, you can quickly filter and review actions such as file sharing, permission changes, and external access. This will provide a direct view of whether the employee has indeed shared documents externally and to whom.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Workspace Admin Help documentation on the

"Security investigation tool" (or similar titles) explains its capabilities. Specifically, the section on "Investigating Drive log events" details how administrators can use filters to view file sharing activities, including external sharing, by specific users and timeframes. This tool is designed for precisely such scenarios where you need to quickly audit user actions related to data access and sharing.

B . Audit Drive access by using the Admin SDK Reports API.

While the Admin SDK Reports API can provide detailed information about Drive activity, using it requires programming skills and setting up custom scripts or applications. This is not the quickest way to investigate a potential immediate security concern. The security investigation tool offers a user-friendly interface for administrators to perform such investigations without needing to code.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin SDK documentation describes the Reports API and its capabilities. While powerful for custom reporting and automation, it's not the fastest method for a quick, ad-hoc security investigation compared to the built-in security investigation tool.

C . Review the employee's user log events within the security investigation tool.

The user log events in the security investigation tool cover a broader range of activities beyond just Google Drive, such as login attempts, password changes, and device management actions. While this might provide some context, it is less focused on file sharing activities compared to the Drive log events. To quickly determine if confidential documents were shared, filtering directly for Drive-related actions is more efficient.

Associate Google Workspace Administrator topics guides or documents reference: The documentation on the security investigation tool outlines the different log sources available, including user logs and Drive logs. For investigating file sharing, the Drive logs provide more specific and relevant information.

D . Create a custom report of the user's external sharing by using the security dashboard.

The security dashboard provides an overview of your organization's security posture and includes pre-built reports and insights. While you can create custom reports, this process might take longer than directly investigating the Drive log events for the specific employee in the security investigation tool. The investigation tool is designed for targeted and immediate analysis of potential security incidents related to user actions.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on the "Security dashboard" explains its features, which focus on overall security trends and insights. While it can be useful for identifying patterns, the security investigation tool is more suited for investigating specific user actions and potential data leaks on demand.

Therefore, the most efficient and direct way to quickly determine if the employee has shared confidential documents externally is to review the employee's Drive log events in the security investigation tool.

54. Frage

Your company has been engaged in a lawsuit, and the legal department has been asked to discover and hold all email for two specific users. Additionally, they have been asked to discover and hold any email referencing "Secret Project 123." What steps should you take to satisfy this request?

- A. Create a Matter and a Hold.
Set the Hold to Gmail, set it to Accounts, and set the usernames to:
user1@your-company.com, user2@your-company.
Set the search terms to secret OR project OR 123.
Save.
- B. Create a Matter and a Hold.
Set the Hold to Gmail, set it to Accounts, and enter: user1@your-company.com AND user2@your-company.com
Set the search terms to: secret AND project AND 123.
Save.
- C. Create a Matter and a Hold.
Set the Hold to Gmail, set it to the top level Organization, and set the search terms to "secret project 123." Create a second Hold.
Set the second Hold to Gmail, set it to Accounts, and enter: user1 @your-company.com, user2@your-company.com.
Save.
- D. Create a Matter and a Hold.
Set the Hold to Gmail, set it to Accounts, and set the usernames to:
user1@your-company.com, user2@your-company.
Set the search terms to: (secret project 123).
Save.

Antwort: C

Begründung:

The correct way to search for the exact term is in quotes ("project 123" and not (project 123)).

Ref: <https://support.google.com/vault/answer/2474474?hl=en>.

Also, after doing this you must create the retention rule using commas to separate user from user.

55. Frage

Your company's help desk is receiving technical support tickets from employees who report that messages from known external contacts are being sent to the spam label in Gmail. You need to correct the issue and ensure delivery of legitimate emails without introducing additional risk as soon as possible. What should you do?

- A. Ask employees to select the messages in Gmail that are being delivered to spam and mark them as Not spam.
- B. Create an address list of approved senders so messages from these users bypass Gmail's spam filters and recipients can decide whether they are spam or not.
- C. Contact the external senders, and tell them to authenticate their sent mail by using domain-based message authentication, reporting, and conformance (DMARC).
- D. Turn off more aggressive spam filtering in spam policies that are applied to the users' organizational unit and add the senders' mail system IP addresses to the email allowlist.

Antwort: A

Begründung:

Asking employees to mark legitimate emails as "Not spam" helps train Gmail's spam filter to correctly identify these senders as trusted. This is a quick and effective way to correct the issue without introducing any additional risk or changes to the email filtering settings. Over time, Gmail will learn to recognize these senders as legitimate, reducing the likelihood of their messages being misclassified as spam in the future.

56. Frage

Your organization deployed Google Workspace Enterprise within the last year, with the support of a partner. The deployment was conducted in three stages: Core IT, Google Guides, and full organization. You have been tasked with developing a targeted ongoing adoption plan for your Google Workspace organization.

What should you do?

- A. Use Work Insights to gather adoption metrics and target your training exercises.
- B. Use Reports APIs to gather adoption metrics and Gmail APIs to deliver training content directly.
- **C. Use Google Guides to deliver ad-hoc training to all of their co-workers and reports.**
- D. Use a script to monitor Email attachment types and target users that aren't using Drive sharing.

Antwort: C

Begründung:

[https://static.googleusercontent.com/media/www.google.com/en/support/enterprise/static/gapps/docs/admin/en/gapps_transition/gapps_transition_guide.pdf] identifies Google Guides as early adopters and champions that can help co-workers get up to speed quickly

57. Frage

Your organization has noticed several incidents of accidental oversharing inside the organization. Specifically, several users have shared sensitive Google Drive items with the entire organization by clicking 'anyone in this group with this link can view'. You have been asked by senior management to help users share more appropriately and also to prevent accidental oversharing to the entire organization. How would you best accomplish this?

- A. Disable sharing to the entire organization so that users must consciously add every person who needs access.
- B. Temporarily disable the Google Drive service for individuals who continually overshare.
- **C. Determine sharing boundaries for users that work with sensitive information, and then implement target audiences.**
- D. Create groups, add users accordingly, and educate users on how to share to specific groups of people.

Antwort: C

Begründung:

Identify Sensitive Information: Determine which users handle sensitive information and assess the current sharing practices.

Define Sharing Boundaries: Establish clear boundaries and guidelines for sharing sensitive information within the organization.

Implement Target Audiences: In the Google Admin console, go to Apps > Google Workspace > Drive and Docs > Sharing settings. Set up target audiences for different groups of users based on their roles and the sensitivity of the information they handle.

Educate Users: Conduct training sessions to educate users on how to share information securely and the importance of adhering to the defined sharing boundaries.

Monitor Sharing Activity: Regularly monitor sharing activity to ensure compliance with the new policies and to identify any instances of oversharing.

Adjust Policies as Needed: Based on the monitoring results, make any necessary adjustments to the sharing policies and target audiences to enhance security and prevent accidental oversharing.
