Salesforce Order Management Administrator Accredited Professional Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which three objects need to be utilized when creating orders using the composite API?

- A. Contact
- B. Account
- C. Product
- D. Order Summary
- E. Pricebook Entry

Answer: A,B,E

Explanation:

The PricebookEntry, Contact, and Account objects are required when creating orders using the composite API. The composite API is a REST API that allows creating multiple records in one request. To create an order using the composite API, an administrator needs to provide the following information:

The Account ID of the customer who placed the order

The Contact ID of the customer who placed the order

The Pricebook Entry IDs of the products that are ordered

The quantity and unit price of each product

The order status and currency References: [Create Orders Using Composite API], [Composite Resources]

NEW QUESTION # 32

Which option is available for an admin to use as middleware to import data to, or export data from Order Management?

- A. Find an application on AppExchange
- B. Use Workbench to access the database
- C. Use the Developer console
- D. Use Data Loader
- E. Write Apex classes to query the database and write to a file

Answer: D

Explanation:

Use Data Loader. Data Loader is a client application that allows administrators to bulk import or export data from Salesforce using CSV files. The administrator can use Data Loader to import data into Order Management objects, such as Order Summary, Order Item Summary, Fulfillment Order, etc., or export data from these objects for backup or analysis purposes.

NEW QUESTION # 33

Which set of conditions is required for an Order Summary object to be created?

- A. An Order is created, its status is set to Draft, Create OrderSummaryFlow is installed and Create OrderSummary Flow is activated.
- B. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and the Create OrderSummary Process is installed.
- C. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.
- D. An Order is created, the Create Order Summary Process is installed and the Create Order Summary Process is active

Answer: D

Explanation:

The Order Summary object is a custom object that stores information about an order, such as the total amount, the number of items, and the fulfillment status. The Order Summary object is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. The process and the flow are part of the Order Management package and must be installed and activated for the order summary object to be created. NEW QUESTION # 34

An administrator is creating a flow to manage order fulfillment. The administrator creates a fault path to handle a possible error. What object record should the administrator create in the fault path to notify users of an error?

- A. Process Exception
- B. Order Error
- C. Fulfillment Error
- D. Order Summary Exception

Answer: A

Explanation:
Explanation

The object record that the administrator should create in the fault path to notify users of an error is Process Exception. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. Verified

NEW QUESTION # 35

Which two Order Management objects have their tabs set to Tab Hidden by default?

- A. OrderDeliveryMethod
- B. Locations
- C. Accounts
- D. SalesLocation
- E. Fulfillment Orders

Answer: A,B

Explanation:

The OrderDeliveryMethod and Locations objects have their tabs set to Tab Hidden by default. These objects are used to store information about how an order is delivered and where it is fulfilled from, respectively. They are not meant to be accessed directly by users, but rather through related lists or lookup fields on other objects. Reference: Order Management Objects
