F5CAB4 Reliable Test Materials - Certified F5CAB4 Questions

As we all know that if you can obtain the F5CAB4 certification, your life will change from now on. There will be various opportunities waiting for you. You take the initiative. It is up to you to make a decision. We only live once. Don't postpone your purpose and dreams. Our F5CAB4 Real Exam will escort your dreams. You will get better jobs as well as higher salaries to lead a better life. Come to fight for your bright future and buy our F5CAB4 practice braindumps right now!

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q38-Q43):

NEW QUESTION # 38

A BIG-IP Administrator makes a configuration change to a Virtual Server on the Standby device of an HA pair. The HA pair is

currently configured with Auto-Sync Enabled. What effect will the change have on the HA pair configuration?

- A. The change will take effect when Auto-Sync propagates the config to the HA pair.
- B. The change will be propagated next time a configuration change is made on the Active device.
- C. The change will be undone next time a configuration change is made on the Active device.
- D. The change will be undone when Auto-Sync propagates the config to the HA pair.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: TMOS Device Synchronization (DSC) allows for configuration changes to be made on any device within a synchronization group. If Auto-Sync is enabled, the Control Plane detects the change on the Standby unit and automatically propagates (pushes) that updated configuration to the other members of the HA pair

NEW QUESTION # 39

A BIG-IP Administrator needs to determine who changed a Virtual Server configuration. In which log file would the BIG-IP Administrator find this data? (Choose one answer)

- A. /var/log/ltm
- B. /var/log/audit
- C. /var/log/secure

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

The audit log (/var/log/audit) records configuration changes made on the BIG-IP system, including:

Who made the change (user account)

What was changed (for example, a virtual server modification)

When the change occurred

How it was performed (GUI, TMSH, or API)

Why the other options are incorrect:

/var/log/secure logs authentication events such as login successes and failures, not configuration changes.

/var/log/ltm logs traffic-management and runtime LTM events, not administrative configuration modifications.

Therefore, the correct log file for tracking who changed a virtual server is /var/log/audit.

NEW QUESTION # 40

The BIG-IP appliance fails to boot. The BIG-IP Administrator needs to run the End User Diagnostics (EUD) utility to collect data to send to F5 Support. Where can the BIG-IP Administrator access this utility?

- A. Management Port
- B. External VLAN interface
- C. Console Port
- D. Internal VLAN interface

Answer: C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: The EUD is a hardware-level diagnostic tool that runs outside of the TMOS operating system. Because it is used when the system cannot boot or is in a pre-boot state, it cannot be accessed via the GUI or management network. The administrator must connect physically via the serial Console Port to interact with the boot menu and initiate the hardware tests.

NEW QUESTION # 41

A user needs to generate a QKView to upload to iHealth to determine any issues with upgrading TMOS. Where can the user generate the QKView in the Configuration Utility?

- A. System > Support
- B. System > Software Management
- C. System > Configuration
- D. System > Archives

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Generating a QKView is a standard procedure for identifying device health and upgrade readiness⁴². Within the Configuration Utility, this Control Plane diagnostic tool is located under System > Support⁴³. This utility collects configuration and state data into a single file used by the iHealth 'Upgrade Advisor' to report on known bugs or compatibility issues prior to a version change.

NEW QUESTION # 42

The BIG-IP system is provisioned for LTM only. The BIG-IP Administrator is tasked with provisioning ASM. What process restarts when the BIG-IP Administrator changes the module provisioning? (Choose one answer)

- A. httpd
- B. sshd
- C. bd
- D. tmm

Answer: D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

When a BIG-IP Administrator changes module provisioning (for example, enabling ASM on a system previously provisioned only for LTM), the BIG-IP system must restart the Traffic Management Microkernel (TMM) process.

The TMM process is responsible for:

Traffic handling

LTM, ASM, and other traffic-processing modules

Enforcing security and application policies

Provisioning changes affect how traffic modules are loaded and integrated into TMM. As a result, TMM is restarted, which causes a temporary interruption of traffic processing. This is expected behavior and is why module provisioning changes should be planned during a maintenance window.

Why the other options are incorrect:

A . bd is related to blade/platform management, not module provisioning.

C . sshd handles SSH access and is not affected by provisioning changes.

D . httpd supports the Configuration Utility (GUI) and does not restart due to module provisioning.

Therefore, the correct answer is B. tmm.

NEW QUESTION # 43

.....

The simplified information contained in our F5 F5CAB4 training guide is easy to understand without any difficulties. And our F5 F5CAB4 practice materials enjoy a high reputation considered as the most topping practice materials in this career for the merit of high-effective. A great number of candidates have already been benefited from them.

F5CAB4 Reliable Test Materials: <https://www.prepawayexam.com/F5/braindumps.F5CAB4.etc.file.html>
