Test CTFL-AcT Dumps Pdf, Latest CTFL-AcT Braindumps Pdf

To add all these changes in the CTFL-AcT exam questions we have hired a team of exam experts. They regularly update the ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) exam questions as per the latest CTFL-AcT Exam Syllabus. So you have the option to get free CTFL-AcT exam questions update for up to 1 year from the date of CTFL-AcT exam questions purchase.

Will you feel nervous in facing the real exam? CTFL-AcT Soft test engine can stimulate the real exam environment, so that you can know what the real exam is like,you're your nerves will be reduced, at the same time, your confidence will be strengthened. In addition, CTFL-AcT Soft test engine can install in more than 200 computers, and it supports MS operating system, and it has two modes for practicing. We offer you free demo for CTFL-AcT Soft test engine, you can have a try before buying, so that you can have a better understanding of what you are going to buy. You can enjoy free update for 365 days, and the update version for CTFL-AcT exam materials will be sent to you automatically.

Test CTFL-AcT Dumps Pdf - High Pass Rate Guaranteed.

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that the Software version of our CTFL-AcT actual exam will help you make a good learning plan which is a model test in limited time simulating the Real CTFL-AcT Exam, if you finish the model CTFL-AcT test, our system will generate a report according to your performance.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q48-Q53):

NEW QUESTION # 48
Which of the following statements regarding test execution and defect analysis is MOST correct?

- A. Testers compare the actual execution outcome to acceptance criteria and report deviations, if observed
- B. The document defects are assigned to a developer so that he or she can fix it for the next version
- C. Business analysts and testers explore the business process model to execute the acceptance test
- D. Business analysts repeat failed acceptance test to assess the impact if the observed behavior

Answer: A

Explanation:
In acceptance testing, testers execute test cases that are directly derived from user stories or requirements via their acceptance criteria. During execution, testers compare the actual outcome of the system with the expected result described in the acceptance

criteria. If there's a mismatch (a deviation), it is documented as a defect or discrepancy.

This process is essential for validating that the system meets business needs. The tester's role includes reporting clear, objective findings-not fixing the defect or deciding its severity (which might involve developers or business analysts).

Option A is incorrect: Business analysts may support testing, but execution is primarily a tester's responsibility.

Option C is not fully correct: While developers may fix defects, assignment and triage follow a formal workflow and do not happen automatically.

Option D is incorrect: Business analysts don't repeat test executions; this is the tester's responsibility.

NEW QUESTION # 49
Which one of the following statements defines beta testing BEST?

- A. Beta testing takes place early in the development process to acquire feedback from the market.
- B. During beta testing, genuine users define the acceptance criteria for various realistic configurations.
- C. Beta testers discover defects in the product that escaped during the development process.
- D. Beta testing is performed by developers at the customer's location.

Answer: C

NEW QUESTION # 50
During acceptance test execution, testers and business analysts closely work together during test execution. Of the following statements, which two statements are MOST likely?

- A. Business analysts compare the test execution result to the acceptance criteria of the requirement / user story
- B. Testers systematically record the actual outcome they observe during test execution in a defect
- C. Business analysts gather information from development to evaluate the risk of further actions on other workflows
- D. Testers verify the effectiveness of corrective actions and document their verdict in the defect report
- E. Testers decide on the defect's priority depending on its impact on system usage

Answer: A,D

Explanation:
In acceptance testing, close collaboration between testers and business analysts ensures that test results are properly interpreted and aligned with business expectations.

A). Testers verify the effectiveness of corrective actions and document their verdict in the defect report - Correct. When a defect is resolved, testers retest the system and record whether the issue is fixed. This is a common testing activity during acceptance test execution.

E). Business analysts compare the test execution result to the acceptance criteria of the requirement / user story
- Correct. This ensures the functionality fulfills business needs and determines whether the criteria have been met for acceptance.

Incorrect options:

B: Testers do record actual results, but not necessarily "in a defect" unless a defect is found.

C: Priority is usually assigned by business analysts or stakeholders, not testers alone.

D: Business analysts do consider the impact of changes, but evaluating development risks is more a joint task with architects or developers.

NEW QUESTION # 51
Which TWO of the following statements about exploratory testing are most true?

- A. Exploratory testing implements time-boxed sessions to prioritize tests bases on product risk analysis
- B. Exploratory testing generally begins with the definition of the test charter that defines the detailed test L-' conditions
- C. Exploratory testing is achieved by combining product discovery, test design and execution, and results L- interpretation
- D. Exploratory testing is rather carried out by people with a good knowledge of the business domain, bot not necessarily of the tested functionality
- E. Exploratory testing is and experience-based test technique which refines acceptance criteria into acceptance test cases

Answer: B,C

Explanation:
Exploratory testing is a dynamic testing technique where learning, test design, execution, and interpretation occur simultaneously. It is

especially useful when detailed requirements are unavailable or when testers rely on experience and intuition.

A is correct: Exploratory testing combines exploration, learning about the product, designing and executing tests on the fly, and interpreting the results - all within the same session.

E is also correct: Exploratory testing usually starts with a high-level test charter that defines the mission, objectives, or focus area for the session. It may not define specific test conditions, but it outlines the scope and intent.

Other options:

B: Not accurate - while timeboxing is used, exploratory testing typically relies on charters and experience rather than detailed product risk analysis to prioritize.

C: Incorrect - exploratory testing is not about refining acceptance criteria; that's part of ATDD.

D: Partially true but misleading - good business domain knowledge helps, but understanding the functionality is also important in exploratory testing.

NEW QUESTION # 52

As a tester on an Agile project, you have to perform an exploratory test session for a new feature developed.

Which of the following actions is the LEAST likely to be carried out for the purpose.

- A. Discovering and learning the use of the product
- B. Scripting of the automated test scripts
- C. Preparation of a test charter and review with the Product Owner
- D. Performing the tests and reporting the results

Answer: B

Explanation:

Exploratory testing is an unscripted, experience-based testing technique where the tester learns about the system, designs tests, and executes them simultaneously. It is especially effective in Agile environments, where rapid feedback and creative exploration are valuable.

Option D is the least likely action because scripting automated test scripts is a structured activity that typically occurs after exploratory sessions or during more formal test phases. Exploratory testing emphasizes manual exploration, not automation scripting.

Other options:

A is part of the core purpose of exploratory testing - discovering the product.

B is relevant - defining a charter and discussing it with stakeholders (like the Product Owner) helps guide the exploratory session.

C is also relevant - results of exploratory tests should be documented and communicated.

D). Scripting of the automated test scripts

NEW QUESTION # 53

......

completely understand that it is deep-rooted in the minds of the general public that seeing is believing, so in order to cater to the demands of all of our customers, we have CTFL-AcT prepared the free demo in this website so as to let you have a first taste to discern whether our ISTQB Foundation Level - Acceptance Testing reliable vce is suitable for you or not.

Passing the ISQI CTFL-AcT exam is just a piece of cake, This challenge of CTFL-AcT study quiz is something you do not need to be anxious with our practice materials.
