BONUS!!! Download part of SureTorrent CISM dumps for free: https://drive.google.com/open?id=1B9rp0c3YtbEBO65T1qiMUykYwoy0_oXZ

Our CISM practice engine with passing rate up to 98 percent can build a surely system to elude any kind of loss of you and help you harvest success effortlessly. We are in dire to help you conquer any questions about CISM training materials emerging during your review. If you want to be accepted as an indispensable member in your working condition, and obliterate opponents from a great distance, start by using our CISM Exam Prep to pass the CISM exam now.

To sit for the exam, candidates must have at least five years of experience in information security management, with three of those years being in a role specifically related to information security management. Alternatively, candidates can substitute up to two years of experience with a relevant four-year degree. Upon passing the exam, candidates will receive the CISM Certification, which is valid for three years before requiring renewal.

As for the practical skills, you should be able to perform the following tasks:

- Establish proper information security incidents to allow the accuracy in responding to incidents;
- Maintain the integration of a incident response plan and a disaster recovery plan.
- Make sure to carry out reviews of incidents afterwards to know the exact cause of certain situations to avoid its probability in the future;
- Make sure to test, review, and revise the incident response to ensure the effectiveness and improve response capabilities;

We offer free demos of our CISM learning guide for your reference, and send you the new updates if our experts make them freely.

The CISM certification is an important credential for professionals in the field of information security management. Certified Information Security Manager certification demonstrates an individual's expertise in designing, implementing, and managing an organization's information security program. The CISM exam is a challenging exam that requires candidates to have a deep understanding of information security management principles, best practices, and frameworks. By passing the CISM Exam, individuals can enhance their career opportunities and demonstrate their commitment to the field of information security management.

ISACA Certified Information Security Manager Sample Questions (Q636-Q641):

NEW QUESTION # 636

The decision to escalate an incident should be based PRIMARILY on:

- A. response team experience.
- B. organizational hierarchy.
- C. prioritization by the information security manager.
- **D. predefined policies and procedures.**

Answer: D

Explanation:

Section: INCIDENT MANAGEMENT AND RESPONSE

NEW QUESTION # 637

Which of the aged to regularly report to senior management?

- **A. Threat analysis reports**
- B. Impact of untreated risks
- C. Audit reports
- D. Results of penetration tests

Answer: A

NEW QUESTION # 638

Which of the following is the MOST important objective of post-incident review activities?

- A. Incident documentation
- **B. Continuous improvement**
- C. Evidence collection
- D. Incident triage

Answer: B

Explanation:

The primary goal of post-incident review (PIR) is continuous improvement. After an incident has been contained, eradicated, and systems recovered, a formal review helps identify:

What went wrong or could have been done better

What controls failed or were missing

How the response process can be improved

The goal is not only to learn from the incident but also to enhance incident response capabilities, update plans, and prevent future occurrences.

"Post-incident reviews are a key activity for improving incident response processes. The goal is continuous improvement and prevention of repeat incidents."

- CISM Review Manual 15th Edition, Chapter 4: Incident Management, Section: Post-Incident Activities* While incident documentation and evidence collection are components of the process, they are supportive to the broader strategic objective: learning and improving the overall security posture.

NEW QUESTION # 639

An account with full administrative privileges over a production file is found to be accessible by a member of the software development team. This account was set up to allow the developer to download nonsensitive production data for software testing purposes. The information security manager should recommend which of the following?

- **A. Restrict account access to read only**
- B. Log all usage of this account
- C. Require that a change request be submitted for each download
- D. Suspend the account and activate only when needed

Answer: A

Section: INFORMATION SECURITY PROGRAM MANAGEMENT

Administrative accounts have permission to change data. This is not required for the developers to perform their tasks. Unauthorized change will damage the integrity of the data. Logging all usage of the account, suspending the account and activating only when needed, and requiring that a change request be submitted for each download will not reduce the exposure created by this excessive level of access. Restricting the account to read only access will ensure that the integrity can be maintained while permitting access.

Which of the following will MOST effectively minimize the chance of inadvertent disclosure of confidential information?

- Answer: C**

Section: INFORMATION SECURITY PROGRAM MANAGEMENT
