

Solve All Your Exam Preparation Problems With SAP C_S43_2601 Exam Dumps

Test4Cram offers affordable SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) exam preparation material. You don't have to go beyond your budget to buy updated SAP C_S43_2601 Dumps. Use the coupon code 'SAVE50' to get a 50% exclusive discount on all SAP Exam Dumps. To make your C_S43_2601 Exam Preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions.

Perhaps you plan to seek a high salary job. But you are not confident enough because of lack of ability. Now, our C_S43_2601 practice guide is able to give you help. You will quickly master all practical knowledge in the shortest time. Also, obtaining the C_S43_2601 certificate fully has no problem. With the high pass rate of our C_S43_2601 exam braindumps as 98% to 100%, we can claim that as long as you study with our C_S43_2601 study materials, you will pass the exam for sure.

>> Valid Test C_S43_2601 Braindumps <<

C_S43_2601 Reliable Test Review | Practical C_S43_2601 Information

Many people dream about occupying a prominent position in the society and being successful in their career and social circle. Thus owning a valuable certificate is of paramount importance to them and passing the test C_S43_2601 certification can help them realize their goals. If you are one of them buying our C_S43_2601 Exam Prep will help you pass the C_S43_2601 exam successfully and easily. Our C_S43_2601 guide torrent provides free download and tryout before the purchase and our purchase procedures are safe.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Configure and create Functional Locations
- * Create, serialize and install Equipment
- * Create Functional Location master record ZZ0##-01 and save it. Use the following information:
 - Create Equipment master record EQUI-## and save it. Use the following information:
 - * Serialize the just created Equipment master record EQUI-## . Use the following data:
 - Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

* Access the Transaction : Use transaction code IL01 (Create Functional Location).

* Enter Initial Data :

* Functional Location : ZZ048-01.

* Structure Indicator : ZZ48.

* Functional Location Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Production Line Z48.

* Enter Location and Organization Data :

* Maintenance Plant : 1020.

* Cost Center : 4110.

* Planning Plant : 1020.

* Planner Group : Z48.

* Main WorkCtr : T-ME48.

* Work Center Plant : 1010.

* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

* Access the Transaction : Use transaction code IE01 (Create Equipment).

* Enter Initial Data :

* Equipment : EQUI-48.

* Equipment Category : T.

* Press Enter .

□ * Enter General Data :

* Description : Drive Motor GR48.

* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

* Enter Serialization Data :

* Material : T-PM8000.

* Serial Number : EQUI-48.

* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

* Modify Installation Location :

* Click on the Structure tab.

* Find the FunctLoc field.

* Enter the location: 00-01-ASS-02.

* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 12

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Assign a class to a Technical Object
- * Assign characteristic values to a class
- * Assign class EQ11 value to Technical Object T-PA## .
- * Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

* Equipment : Enter T-PA48 .

* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

* Class Assignment :

* Class Type : Ensure this is set to 002 (Equipment Class).

* Class : Enter EQ11 .

* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the

"Group Counter" field.

* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

* Action : Click the Save (floppy disk) icon.

* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

NEW QUESTION # 13

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

* Create a Maintenance Work Center

* Create a capacity demand for a Maintenance Work Center

* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:

* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- * create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- * maintain the required capacity values
- * create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Description = Mechanical Maintenance 42
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

Step-by-step procedure

Step 1: Open work center creation

- * Go to SAP GUI command field
- * Enter transaction IR01
- * Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Work Center Category = 0005
- * In Copy from :
- * Plant = 1010
- * Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- * select Capacities
- * continue with the green check

This was important because the task required changing capacity-related data:

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Step 4: Maintain basic data

On the work center master screen:

- * change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- * No. Ind. Capacities = 5
- * Capacity Base Unit = H
- * Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- * Start Time = 08:00:00
- * End Time = 17:00:00
- * Length of breaks = 01:00:00
- * Capacity Utilization = 60
- * No. Ind. Capacities = 5

This produced:

* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

* create a capacity demand of 1 hour

* for the newly created maintenance work center ZZ-ME42

* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

* In the command field, enter /nIW31

* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

* Order Type = PM01

* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

* Operation = 0010

* Work Center = ZZ-ME42

* Plant = 1010

* Control Key = PM01

* Work Duration / Work = 1

* Unit = H

Then press Enter.

This operation is the actual source of the capacity demand.

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour.

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

* Click Save

SAP displayed the confirmation message:

* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1-hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

* Maintenance Work Center created

* Work Center = ZZ-ME42

* Plant = 1010

* confirmed by SAP message that the work center already existed when rechecked

* Capacity maintained correctly

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H
- * Capacity demand created
- * maintenance order type PM01
- * operation assigned to ZZ-ME42
- * planned work = 1 H
- * Order successfully saved
- * SAP confirmation: Order saved with number 4000314

NEW QUESTION # 14

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure and create a Maintenance Notification
- * Assign catalog specific data to a Maintenance Notification
- * Create a Maintenance Notification and save it. Use the following information:
 - * Assign the following data to the just created notification:
 -

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

* Initial Screen :

* Notification Type : Enter Z1 .

* Press Enter .

* Enter General Data :

* Description : Enter Pump is leaking .

* Priority : Select High .

* Equipment : Enter T-PA48 .

* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

□ Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

* Enter Damage Details :

* Damage Code Group : PMP-100 .

* Damage Code : 1000 .

* Description : Leaking .

* Enter Object Part Details :

* Object Part Code Group : PMP-Z48 .

* Object Part Code : 1001 .

* Description : Inlet/Outlet .

* Enter Cause Details :

* Cause Code Group : PMP-248 .

* Cause Code : 2000 .

* Description : Material fatigue .

* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

NEW QUESTION # 15

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 16

.....

Some customers may care about the private information problem while purchasing C_S43_2601 Training Materials, if you are

concern about this problem, our company will end the anxiety for you if you buy C_S43_2601 training material of us . Our company is a professional company, we have lots of experiences in this field, and you email address and other information will be protected well, we respect the privacy of every customers. You give me trust , we give you privacy.
