

Expert-Verified F5 F5CAB2 Exam Questions for Reliable Preparation

Exam B F5 101 100 Questions and Answers 2023-2024 with complete solution

What does HTTP status code 500 mean? - A. Service unavailable
B. Internal server error ###
C. Gateway timeout
D. Bad gateway

An administrator wants to insert per-session data in a users browser so that user requests are directed to the same session.
Which session persistence method should the administrator use? - A. SSL persistence
B. Source address persistence
C. Destination address persistence
D. Cookie persistence ###

An organization needs to protect its data center from layer three-based and layer four-based exploits.
Which F5 product provides this functionality - A. AFM ###
B. ASM
C. GTM
D. APM

In which FTP mode is the server responsible for initiating the data correction back to the client? - A. Protected FTP
B. Active FTP ###
C. Secure FTP
D. Passive FTP

A company deploys F5 load balancers to manage a large number of secure applications. The company manage certificates. Which F5 product provides this functionality? - A. iHealth
B. BIG-IP ###
C. GTM
D. LTM

What are two examples of network layer protocols? (Choose two) - A. ARP ###
B. TCP
C. IPv4
D. BGP
E. ICMP ###

We own three versions of the F5CAB2 exam torrent for you to choose. They include PDF version, PC version and APP online version. You can choose the most convenient version of the F5CAB2 quiz torrent. The three versions of the F5CAB2 test prep boost different strengths and you can find the most appropriate choice. For example, the PDF version is convenient for download and printing and is easy and convenient for review and learning. It can be printed into papers and is convenient to make notes. You can learn the F5CAB2 Test Prep at any time or place and repeatedly practice. The version has no limit for the amount of the persons and times. The PC version of F5CAB2 quiz torrent is suitable for the computer with Windows system. It can simulate real operation exam atmosphere and simulate exams.

F5 F5CAB2 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Explain high availability (HA) concepts: This domain addresses HA concepts including integrity methods, implementation approaches, and advantages of high availability configurations.
Topic 2	<ul style="list-style-type: none">Explain the relationship between interfaces, trunks, VLANs, self-IPs, routes and

Topic 3	<ul style="list-style-type: none"> • their status • statistics: This domain covers BIG-IP networking components including interfaces, trunks, VLANs, self-IPs, and routes, their dependencies and status, plus predicting traffic paths and egress IPs.
Topic 4	<ul style="list-style-type: none"> • Define ADC application objects: This domain covers ADC basics including application objects, load balancing methods, server selection, and key ADC features and benefits.
Topic 5	<ul style="list-style-type: none"> • Identify the different virtual server types: This domain covers BIG-IP virtual server types: Standard, Forwarding, Stateless, Reject, Performance Layer 4, and Performance HTTP.

Quick and Easiest Way of Getting F5 F5CAB2 Certification Exam

In the process of using the F5CAB2 study training materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our F5CAB2 Latest Questions already have three different kinds of learning materials, what is the most suitable F5CAB2 test guide for you? You can just follow the instructions for F5CAB2 study guide on the web or ask our services about it.

F5 BIG-IP Administration Data Plane Concepts (F5CAB2) Sample Questions (Q57-Q62):

NEW QUESTION # 57

When upgrading a BIG-IP redundant pair, what happens when one system has been updated but the other has not?

- A. The first system to be updated will assume the Active role.
- **B. Syncing should not be performed.**
- C. The older system will issue SNMP traps indicating a communication error with the partner.
- D. This is not possible since both systems are updated simultaneously.

Answer: B

Explanation:

The F5 BIG-IP upgrade process for HA pairs requires a specific "staggered" approach to maintain uptime.

* Version Mismatch: When one unit is upgraded to a newer version of TMOS (e.g., from 15.1 to 16.1), it enters a26 "Version Mismatch" 27state with its peer.

* Configuration Sync: Because the configuration schemas between different versions are often incompatible, ConfigSync should not be performed. Attempting to sync a newer configuration to an older system (or vice-versa) can cause configuration corruption or system instability.

* Failover Capability: Generally, a pair with a version mismatch can still fail over to ensure traffic continuity during the upgrade window, but administrative changes and syncs must be paused until both units are on the same version.

NEW QUESTION # 58

What type of virtual server has a destination of 0.0.0.0 and listens on a specific VLAN? (Choose one answer)

- A. Standard
- B. Forwarding (Layer 2)
- **C. Wildcard**
- D. Forwarding (IP)

Answer: C

Explanation:

In the F5 BIG-IP system, virtual servers are categorized based on their destination address and mask. The system distinguishes between three primary destination scopes:

* Host Virtual Server: A virtual server that has a specific IP address (e.g., 10.10.10.50) and a /32 mask.

* Network Virtual Server: A virtual server that has a destination address representing a subnet (e.g., 192.168.10.0) and a specific mask (e.g., /24).

* Wildcard Virtual Server: A virtual server that has a destination address of 0.0.0.0 (or :: for IPv6) and a mask of 0.0.0.0 (or /0). While a "Forwarding (IP)" virtual server (Option D) is the Type (behavioral configuration) often used to route traffic without load balancing, the term Wildcard (Option C) is the specific administrative term used to define the "type" of virtual server based on the 0.0.0.0 destination address.

A common architectural use case is to create a Wildcard Virtual Server that listens only on an internal VLAN to act as a default gateway for outbound traffic (Internet access) for back-end servers. This ensures the BIG-IP system can process and forward traffic that does not match any other specific virtual server configuration.

NEW QUESTION # 59

A BIG-IP Administrator assigns the default HTTP health monitor to a pool that has three members listening on port 80. When the administrator connects to each pool member using the curl utility, two of the members respond with a status of 404 Not Found, while the third responds with 200 OK. What will the pool show for member availability? (Choose one answer)

- A. Two members online and one member offline
- B. All members offline
- C. All members online
- D. Two members offline and one member online

Answer: D

Explanation:

In BIG-IP LTM, health monitors are used to determine the availability of pool members and directly influence traffic flow decisions in the data plane.

Key characteristics of the default HTTP monitor according to BIG-IP Administration Data Plane Concepts:

* Sends an HTTP request (typically GET /)

* Expects an HTTP response code of 200 OK

* Any response other than 200 is treated as a monitor failure

* A failed monitor causes the pool member to be marked offline (down)

In this scenario:

* Two pool members return 404 Not Found

* A 404 response indicates that the requested object was not found

* This does not meet the success criteria of the default HTTP monitor

* These two members are therefore marked offline

* One pool member returns 200 OK

* This matches the expected response

* The member is marked online

Resulting Pool Member Availability:

* 2 members: Offline

* 1 member: Online

Why the Other Options Are Incorrect:

* B - 404 responses are not considered healthy by the default HTTP monitor

* C - At least one member responds with the expected 200 OK

* D - Members returning 404 responses fail the monitor and cannot be marked online

Key Data Plane Concept Reinforced:
BIG-IP health monitors make binary availability decisions based strictly on configured success criteria. For HTTP monitors, response codes matter-404 is a failure, even if the service is technically reachable.

NEW QUESTION # 60

What type of Virtual Server is configured with no Pool-members, and proxies traffic to the destination IP address specified by the client device?

- A. Standard
- B. Forwarding (IP)
- C. Performance (Layer 4)
- D. Stateless

Answer: B

Explanation:

A Forwarding (IP) virtual server is unique because it does not perform load balancing in the traditional sense.

* No Pool Members: Unlike a Standard virtual server, which requires a pool to direct traffic, a Forwarding (IP) virtual server typically has no pool assigned.

* Destination-Based Routing: The BIG-IP system looks at the destination IP address in the original packet header sent by the client. It then consults the BIG-IP system's local routing table to determine where to send the packet.

* Transparency: It acts as a high-performance router/gateway, often used to forward traffic from internal servers to the internet or across different subnets while still allowing the BIG-IP to apply features like SNAT or bandwidth controllers.

* Stateful Tracking: While it forwards traffic based on the routing table, it still creates an entry in the connection table to track the flow (unless it is a Stateless virtual server).

NEW QUESTION # 61

Which statement is true concerning iRule events?

- A. All iRule events are appropriate at any point in the client-server communication.
- B. If an iRule references an event that doesn't occur during the client's communication, the client's connection will be terminated prematurely.
- C. All iRule events relate to HTTP processes.
- D. All client traffic has data that could be used to trigger iRule events.

Answer: D

Explanation:

iRules are event-driven scripts that allow for advanced traffic manipulation.

* Universality of Events: Every packet that passes through the BIG-IP data plane triggers events.

Even non-HTTP traffic triggers events such as CLIENT_ACCEPTED (when the TCP connection is established) or CLIENT_DATA (when raw data is received). Therefore, all client traffic—regardless of protocol—has data that can trigger an iRule event.

* Event Specificity: Events are not universal (Option C is false). For example, HTTP_REQUEST only occurs after a full HTTP header is parsed. You cannot trigger an HTTP_RESPONSE event before a request has been sent to a server.

* Protocol Agnostic: iRules are not limited to HTTP (Option A is false); they can handle TCP, UDP, DNS, FTP, SIP, and more.

* Error Handling: If an iRule references an event that never triggers (e.g., an HTTP_REQUEST event in a purely TCP virtual server), the iRule code for that event simply never executes. It does not terminate the connection (Option D is false).

NEW QUESTION # 62

.....

No one can beat us in terms of F5 F5CAB2 exam prices. Download the F5 F5CAB2 exam dumps after paying discounted prices and start this journey. You can study F5CAB2 Exam Engine anytime and anywhere for the convenience of our three versions of our F5CAB2 study questions bring.
