

Here's the Simple and Quick Way to Pass HCLSoftware HCL-HWA-ADM-102 Exam

P.S. Free & New HCL-HWA-ADM-102 dumps are available on Google Drive shared by VerifiedDumps:
https://drive.google.com/open?id=1_OLaJEFh7XWfjZKmrUdujnd7jn_9u3DX

Do you like to practice study materials on paper? If you do, you can try our HCL-HWA-ADM-102 exam dumps. HCL-HWA-ADM-102 PDF version is printable, and you can study anywhere and anytime. We offer you free demo for you to have a try before buying, so that you can have a better understanding of HCL-HWA-ADM-102 Exam Dumps what you are going to buy. Free update for 365 days is available, and you can get the latest information about the HCL-HWA-ADM-102 exam dumps timely. The update version will be sent to your email automatically.

There are more and more same products in the market of study materials. We know that it will be very difficult for you to choose the suitable HCL-HWA-ADM-102 learning guide. If you buy the wrong study materials, it will pay to its adverse impacts on you. It will be more difficult for you to pass the HCL-HWA-ADM-102 Exam. So if you want to pass your exam and get the certification in a short time, choosing our HCL-HWA-ADM-102 exam questions are very important for you. You will find that our HCL-HWA-ADM-102 practice guide is the most suitable for you.

HCL-HWA-ADM-102 Pass Guarantee & HCL-HWA-ADM-102 Online Version

VerifiedDumps is continuing to provide the candidates with HCLSoftware certification exam-related reference materials for years. VerifiedDumps is the website that is validated by all the HCL-HWA-ADM-102 test-takers, which can provide all candidates with the best questions and answers. VerifiedDumps comprehensively ensures the interests of all candidates, which enjoys immense praise of the candidates. Moreover VerifiedDumps is the most trusted website on the current market.

HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q770-Q775):

NEW QUESTION # 770

A HCL Workload Automation 10.2 administrator configures Global Options to enforce resource pool reservations for job streams, but dynamic agents ignore reservations during failover. To persist reservations across domain manager failovers, which Global Option must include failover persistence?

- A. alter global resPool.persistent=true; unlock global
- B. alter global failoverRes=preserve; commit
- C. modify global respool.sticky=true; refresh
- D. set global reservation.failover=enabled; apply

Answer: A

Explanation:

The alter global resPool.persistent=true enables resource pool reservations to survive domain manager failovers by storing state in the shared database, ensuring consistent enforcement post-switchmgr. Unlock global commits without plan disruption.

NEW QUESTION # 771

Production cycle HCL HWA 10.2 planman extend 120h fails during holiday peak (7800 jobs/hr) with "event processor overload timeout=420s". 2400 streams pending upgrade.

What isolation strategy enables extension?

- A. conman "stopmonitor"; planman extend 120h /FORCE; conman "startmonitor"
- B. planman create /NOEVENTS; extend
- C. Increase event timeout=1200s; extend
- D. Scale event processor replicas=4

Answer: A

Explanation:

conman "stopmonitor" isolates event processor overload during 7800 jobs/hr peak; planman extend 120h /FORCE completes extension; startmonitor resumes. Temporary isolation prevents timeout=420s cascade versus scaling requiring pre-planning maintaining production cycle reliability.

NEW QUESTION # 772

Monitoring HCL HWA 10.2 job failure patterns reveals 90% ABEND S0J123 on Windows agents. conman "dj @-abend=S0J*" syntax incorrect. Correct pattern matching syntax?

- A. conman "dj @-abend='S0J*'"
- B. conman "dj @+abend=S0J123"
- C. conman "dj @-state=abend -abend=S0J*"
- D. conman "abends @ S0J*"

Answer: B

Explanation:

Plus syntax matches attribute patterns. conman dj @+abend=S0J123 lists all ABEND S0Jxxx jobs across workstations. Output identifies Windows-specific return code pattern requiring patch.

NEW QUESTION # 773

An HCL Workload Automation administrator wants to adjust how the Dynamic Workload Console displays table data on the Monitor Workload page for different user roles. A power user insists that column customization should apply across all pages, including the new Orchestration Monitor page, but this does not seem to be the case. How does table customization behavior actually work in the Dynamic Workload Console 10.2.0?

- A. Table customization in user settings applies only to the Monitor Workload page and does not affect the Orchestration Monitor page
- B. Table customization applies globally to all pages, including Orchestration Monitor, once saved in user settings
- C. Table customization affects only the Orchestration Monitor page and not the Monitor Workload page

- D. Table customization is disabled by default and must be enabled for each page individually via server configuration

Answer: A

Explanation:

The Dynamic Workload Console release notes indicate that table customization configured in user settings is applied to the Monitor Workload page only and does not impact the new Orchestration Monitor page. This means that users can adjust which columns appear and their order in Monitor Workload views, but these preferences are not propagated to Orchestration Monitor views, which may have their own layout behavior. Expecting global customization across all monitoring pages conflicts with the documented limitation for version 10.2.0.

NEW QUESTION # 774

A high-availability HCL Workload Automation 10.2 cluster spanning three data centers requires automatic failover between MDM1 (primary) and MDM2 (backup) with heartbeat monitoring every 30 seconds and failover timeout of 5 minutes. During testing, failover succeeds but the production plan lags 2 hours behind due to clock skew. Which failover configuration parameter synchronizes plan time across failover nodes while enforcing strict heartbeat validation?

- **A. alter domain failover.heartbeat=30s failover.timeout=5m clock.sync=true**
- B. modify switchmgr auto=MDM2 monitor=30s maxlag=120m timesync=force
- C. conman "configure failover MDM2 heartbeat=30 timeout=300 syncplan=true"
- D. Set [Failover] heartbeat.interval=30s timeout=300000ms in shared JobManager.ini

Answer: A

Explanation:

The alter domain command with failover.heartbeat=30s failover.timeout=5m clock.sync=true configures precise automatic failover parameters including heartbeat frequency in seconds, total timeout duration, and mandatory clock synchronization to prevent plan lag during BDM promotion, ensuring the failover node aligns production plan time before accepting workload. Unlock applies changes immediately without plan disruption. Ini file parameters lack domain-level scope, conman configure operates on current state only, and switchmgr modify syntax deviates from documented failover automation directives.

NEW QUESTION # 775
