

# F5CAB4 Valid Test Simulator, Valid F5CAB4 Practice Questions

## Primerica Practice Test: Questions & Answers

The receipt given to a life insurance applicant when the application is completed and the initial premium is received is called a(n)

(Ans- conditional receipt)

Statements in the application for insurance that are believed to be true to the best of the applicant's knowledge are called

(Ans- representations)

An annuity is considered fixed when it does all of the following EXCEPT

(Ans- provides the annuitant with an interest rate that is the lesser of the guaranteed or current rate)

The most common type of whole life insurance where premiums are payable over the whole life of the insured to age 100 is called

(Ans- continuous premium (straight) life)

The policy and a copy of the application, along with any riders and amendments, is called the

(Ans- entire contract)

Money borrowed from the policy's cash value is

(Ans- not taxable)

We can produce the best F5CAB4 exam prep and can get so much praise in the international market. On the one hand, the software version can simulate the real examination for you and you can download our F5CAB4 study materials. On the other hand, you can finish practicing all the contents in our F5CAB4 practice materials within 20 to 30 hours. What's more, during the whole year after purchasing, you will get the latest version of our study materials for free. You can see it is clear that there are only benefits for you to buy our F5CAB4 learning guide, just have a try right!

Candidates can benefit a lot if they can get the certificate of the exam: they can get a better job in a big company, and the wage will also promote. Our F5CAB4 Training Material will help you to get the certificate easily by provide you the answers and questions. The questions and answers of the practicing materials is correct and the updated one, we will also update the version for you regularly, therefore, you can know the latest changes for the exam.

## F5CAB4 Valid Test Simulator - 100% Pass Quiz F5 - First-grade F5CAB4 - Valid BIG-IP Administration Control Plane Administration Practice Questions

We can produce the best F5CAB4 exam prep and can get so much praise in the international market. On the one hand, the software version can simulate the real examination for you and you can download our F5CAB4 study materials. On the other hand, you can finish practicing all the contents in our F5CAB4 practice materials within 20 to 30 hours. What's more, during the whole year after purchasing, you will get the latest version of our study materials for free. You can see it is clear that there are only benefits

for you to buy our F5CAB4 learning guide, just have a try right!

## F5 BIG-IP Administration Control Plane Administration Sample Questions (Q27-Q32):

### NEW QUESTION # 27

New Syslog servers have been deployed in an organization. The BIG-IP Administrator must reconfigure the BIG-IP system to send log messages to these servers. In which location in the Configuration Utility can the BIG-IP Administrator make the needed configuration changes to accomplish this?

- A. System > Configuration > Device3
- B. System > Configuration > Local Traffic
- C. System > Logs > Audit2
- D. System > Logs > Configuration

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Managing how a BIG-IP communicates with external management services like Syslog is a core Control Plane task. The Configuration Utility organizes these settings under the "System" menu. Specifically, to define remote logging destinations and formats, the administrator must navigate to System > Logs > Configuration to ensure the Control Plane correctly forwards system events to external collectors

### NEW QUESTION # 28

What are the recommended methods for forcing a BIG-IP system to standby mode? (Choose two answers)

- A. Active BIG-IP: Configuration Utility > Device Management > Devices > Local Device (Self) > Force to Standby
- B. Active BIG-IP: CLI > tmsh run /sys failover standby
- C. Active BIG-IP: Configuration Utility > Device Management > Traffic Groups > Local Device (Self) > Force to Standby
- D. Active BIG-IP: CLI > tmsh run /sys failover device standby

**Answer: A,D**

Explanation:

BIG-IP provides two supported and documented methods to manually force a device into standby state in a high-availability (HA) configuration:

\* CLI method (A):

\* `tmsh run /sys failover device standby`

This is the correct and supported TMSH command to force the local device to transition from active to standby.

\* Configuration Utility method (B): Navigating to Device Management > Devices > Local Device (Self) and selecting Force to Standby performs the same operation through the GUI and is fully supported.

Why the other options are incorrect:

\* C is incorrect: Traffic Groups do not provide a "Force to Standby" option for the local device; traffic groups are used to manage which device owns specific traffic, not to force device-level failover.

\* D is incorrect: `tmsh run /sys failover standby` is not a valid TMSH command. The correct syntax requires device standby.

Thus, the correct answers are A and B.

### NEW QUESTION # 29

A BIG-IP Administrator needs to restore an encrypted UCS archive from the command line using the TMSH utility. Which TMSH command should the BIG-IP Administrator use to accomplish this?

- A. `load /sys ucs <filepath> passphrase <password>`
- B. `load /sys ucs <filepath> no-license`
- C. `load /sys config file <filepath>`
- D. `load /sys config file <filepath> passphrase <password>`

**Answer: A**

Explanation:

Restoring system states from backups is a fundamental Control Plane administrative task<sup>2</sup>. When a User Configuration Set (UCS) archive is created with encryption, it requires the correct passphrase to be decrypted and loaded during the restoration process.

\* UCS Command Structure: The `tmsh load /sys ucs` command is the specific utility for restoring these comprehensive configuration archives.

\* Encrypted Restores: If the archive was encrypted during creation, the passphrase argument must be appended to the command followed by the actual password used to encrypt the file.

\* Comparison with Other Options:

\* `load /sys config` file is used for loading text-based configuration files (like `bigip.conf`), not full UCS archives<sup>6</sup>.

\* The `no-license` flag is used when you want to restore a configuration without overwriting the existing license (common during RMA replacements), but it does not provide the mechanism for entering an encryption passphrase.

### NEW QUESTION # 30

A BIG-IP Administrator needs to load a UCS file but must exclude the license file.

How should the administrator perform this task? (Choose one answer)

- A. From the CLI with command `tmsh load /sys ucs <ucs filename>`
- B. From the GUI, select the UCS file, uncheck the license box, and click Restore
- C. From the CLI with command `tmsh load /sys ucs <ucs filename> no-license`
- D. From the GUI, select the UCS file and click Restore

**Answer: C**

Explanation:

When restoring a User Configuration Set (UCS) file, BIG-IP allows administrators to selectively exclude the license during the restore process. From the CLI, this is accomplished using the `no-license` option with the `tmsh load /sys ucs` command.

The command:

```
tmsh load /sys ucs <ucs filename> no-license
```

restores:

\* System configuration

\* Certificates and keys

\* Device and traffic objects

while explicitly excluding the license file, which is required when:

\* Migrating configurations between devices

\* Restoring to hardware with a different license

\* Avoiding license conflicts or overwrites

Why the other options are incorrect:

\* A does not provide the option to exclude the license.

\* B restores the UCS including the license, which does not meet the requirement.

\* D is incorrect because the BIG-IP GUI does not provide a checkbox to exclude the license during UCS restore.

Therefore, the correct and supported method is C.

### NEW QUESTION # 31

Which file should the BIG-IP Administrator check to determine when a Virtual Server changed its status?

- A. `/var/log/monitors`
- B. `/var/log/ltn`
- C. `/var/log/lastlog`
- D. `/var/log/audit`

**Answer: B**

Explanation:

Monitoring and reporting current device status involves tracking the health of traffic objects like Virtual Servers<sup>20</sup>. The Control Plane logs transition events-such as a Virtual Server moving from 'Available' (green) to 'Offline' (red) due to health monitor failures-in the `/var/log/ltn` file<sup>21</sup><sup>22</sup>. While the audit log tracks who changed a configuration, the LTM log tracks system-initiated status changes<sup>22</sup><sup>22</sup><sup>22</sup><sup>22</sup><sup>22</sup><sup>22</sup>.
