Esri EAEP2201 Test King - Most EAEP2201 Reliable Questions

There are a lot of experts and professors in or company in the field. In order to meet the demands of all people, these excellent experts and professors from our company have been working day and night. They tried their best to design the best EAEP2201 study materials from our company for all people. By our study materials, all people can prepare for their EAEP2201 exam in the more efficient method. We can guarantee that our study materials will be suitable for all people and meet the demands of all people, including students, workers and housewives and so on. If you decide to buy and use the EAEP2201 Study Materials from our company with dedication on and enthusiasm step and step, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the EAEP2201 study materials of our company.

Esri Enterprise Administration Professional 2201 Sample Questions (Q59-Q64):

NEW QUESTION # 59
A new user is added to the organization and can see roads, building footprints, parcels, and traffic data shared with them in Portal for ArcGIS. However, the user cannot use analysis tools in the portal, even though the SpatialAnalysisTools service is verified to be running.
What is causing this issue?

- A. SpatialAnalysisTools needs to be restarted
- B. The service needs to be published as a hosted layer
- C. The hosting server has not been configured
- D. The new user is a Creator user type

Answer: D

NEW QUESTION # 60

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Adjust pooling to handle the request
- B. Enable cached drawing mode
- C. Use service defaults for publishing
- D. Increase the max record count

Answer: D

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000). To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.
* Option C would keep the default setting of 1,000, which would not meet the requirement.
* Option D relates to visual performance, not record retrieval.

NEW QUESTION # 61

A single Linux machine deployment of ArcGIS Enterprise has a home partition of 20 GB, a /data partition of 150 GB, and an /opt partition of 75 GB.

Where should the configuration store and directories be located?

- A. /home
- B. /data
- C. /opt

Answer: B

Explanation:

Theconfiguration store and server directoriesfor ArcGIS Enterprise should be placed in a partition with ample disk spaceandstable read/write performance, as these directories store logs, cache, uploads, and critical site configuration information.

In this scenario:

* The /home partition (20 GB) is insufficient for growth and operational overhead.
* The /opt partition (75 GB) is moderately sized but still smaller than the /data partition.
* The /data partition (150 GB) provides the most space, making it the best choice to ensure scalability and system reliability.

Best practicefrom ArcGIS Enterprise documentation recommends placing server directories and configuration stores on high-capacity partitions like /data when available.

Reference Source:ArcGIS Enterprise Installation Guide - File system and storage planning on Linux

NEW QUESTION # 62

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

* Services added to the shared instance pool
* Log retention settings reduced
* Log level set to Debug
* ArcGIS Server machine restarted
* An additional ArcGIS Server site federated
What is causing this slow performance?

- A. Restarting ArcGIS Server
- B. Federating the additional ArcGIS Server site
- C. Adjusting the log level to Debug
- D. Additional services in the shared instance pool

Answer: D

NEW QUESTION # 63
An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA).
Configuration includes:
* All accounts in the Active Directory group gisusers are added to the portal
* Existing users can sign in without entering credentialsHowever, new employees assigned to the same gisusers group cannot log in, create content, or join groups.What is causing this issue for the new employees?

- A. The Web Adaptor cache must be cleared
- B. Their Active Directory accounts have not had sufficient time to sync to the portal
- C. Their Active Directory accounts have not been added to the portal
- D. Their Active Directory accounts have been assigned an incompatible default user type

Answer: D

NEW QUESTION # 64
