CTS Reliable Source & CTS Best Study Material

As we all know, in the highly competitive world, we have no choice but improve our soft power (such as CTS certification). You may be in a condition of changing a job, but having your own career is unbelievably hard. Then how to improve yourself and switch the impossible mission into possible is your priority. Here come our CTS Guide torrents giving you a helping hand. It is of great significance to have CTS question torrent to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

AVIXA CTS - General Exam Syllabus Topics:

Topic	Weight
Duty A: Creating AV Solutions	47%
Task 1: Gather Customer Information	10%
Task 2: Conduct Initial Site Survey	9%
Task 3: Evaluate Site Environment (acoustics, lighting, seating, finishing, etc.)	9%
Task 4: Develop an AV Project Scope	9%
Task 5: Design AV Solutions	10%
Domain 2: Implementing AV Solutions	27%
Task 1: Integrate AV Solutions	10%
Task 2: Operate AV Solutions	9%

AVIXA Certified Technology Specialist Sample Questions (Q135-Q140):

NEW QUESTION # 135

A technician sets up a 1080p LCD screen and connects a 720p source via an 8 m (26 ft) HDMI cable. Later, the source is switched to 1080p output and the image appears on screen, but with sparkling pixels and occasional dropouts. Why has the image quality degraded?

- A. EDID information is incorrect for new image
- B. Change to aspect ratio needs to register
- **C. Signal bandwidth exceeds cable capabilities**
- D. Color depth requirement

Answer: C

Explanation:

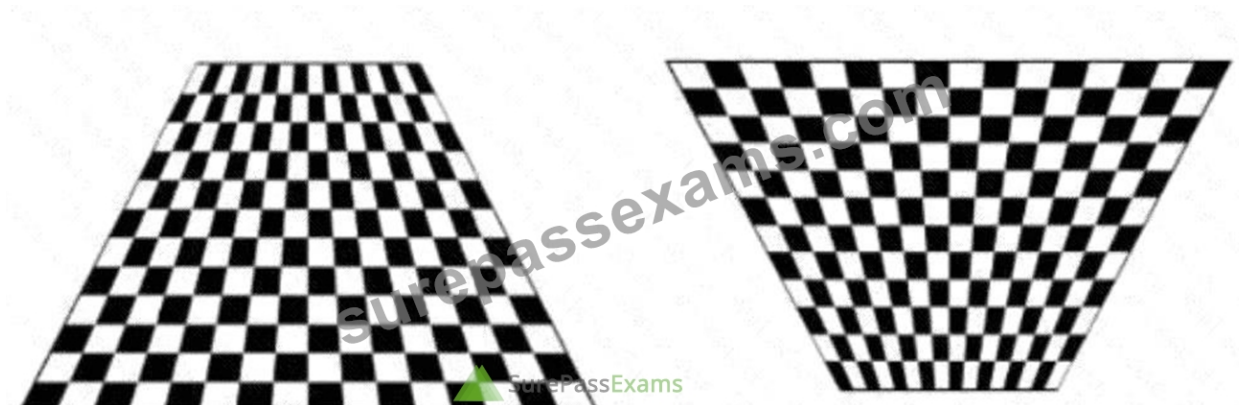

Higher resolution (like 1080p) increases bandwidth demands. While the cable was sufficient for 720p, switching to 1080p may exceed its capabilities-especially over longer distances (like 8 meters), leading to sparkling, dropouts, or signal instability.

"HDMI signal degradation over long runs is often caused by insufficient bandwidth handling, particularly at higher resolutions like 1080p or 4K."

- CTS Exam Guide, Signal Integrity and Cabling Standards

NEW QUESTION # 136

Exhibit:

These images provide examples of _____ distortion.

- A. Keystone
- B. Contrast
- C. Chromatic
- D. Trapezoid

Answer: A

Explanation:

The images shown represent keystone distortion, which occurs when a projector is not aligned perpendicularly to the screen. This misalignment results in a trapezoidal image rather than a rectangular one.

According to the AVIXA CTS Exam Guide, keystone distortion is covered under the Display Systems section, which states:

"Keystone distortion happens when the projector lens is not perpendicular to the screen plane, often due to improper vertical or horizontal positioning. The image appears wider at one end and narrower at the opposite, forming a shape like a keystone - hence the name." This distortion is not related to contrast (A), which refers to the difference between light and dark elements in an image, nor chromatic (B), which pertains to color distortion or aberration. While the shapes resemble trapezoids, trapezoid (D) is a description of the resulting shape, not the distortion type. The technical term for this specific distortion is keystone.

NEW QUESTION # 137

Based on this image, what is the aspect ratio for WUXGA?

Answer: A

Explanation:

WUXGA stands for Wide Ultra Extended Graphics Array and has a resolution of 1920 x 1200 pixels. To determine the aspect ratio, we divide the width by the height:

$\text{Aspect Ratio} = \frac{1920}{1200} = 1.6:1$ Therefore, the aspect ratio for WUXGA is 1.6:1. This aspect ratio is common for widescreen monitors and provides a wider display format compared to traditional 4:3 screens, enhancing the viewing experience for multimedia content.

NEW QUESTION # 138

The limits of the vertical visual field indicate that displays should be positioned where in relation to the viewers' standard line of sight?

- A. top of the image is no more than 30 degrees above
- B. center of the image is precisely on-axis
- C. bottom of the image is no more than 30 degrees below
- D. center of the image is at least 10 degrees above

Answer: A

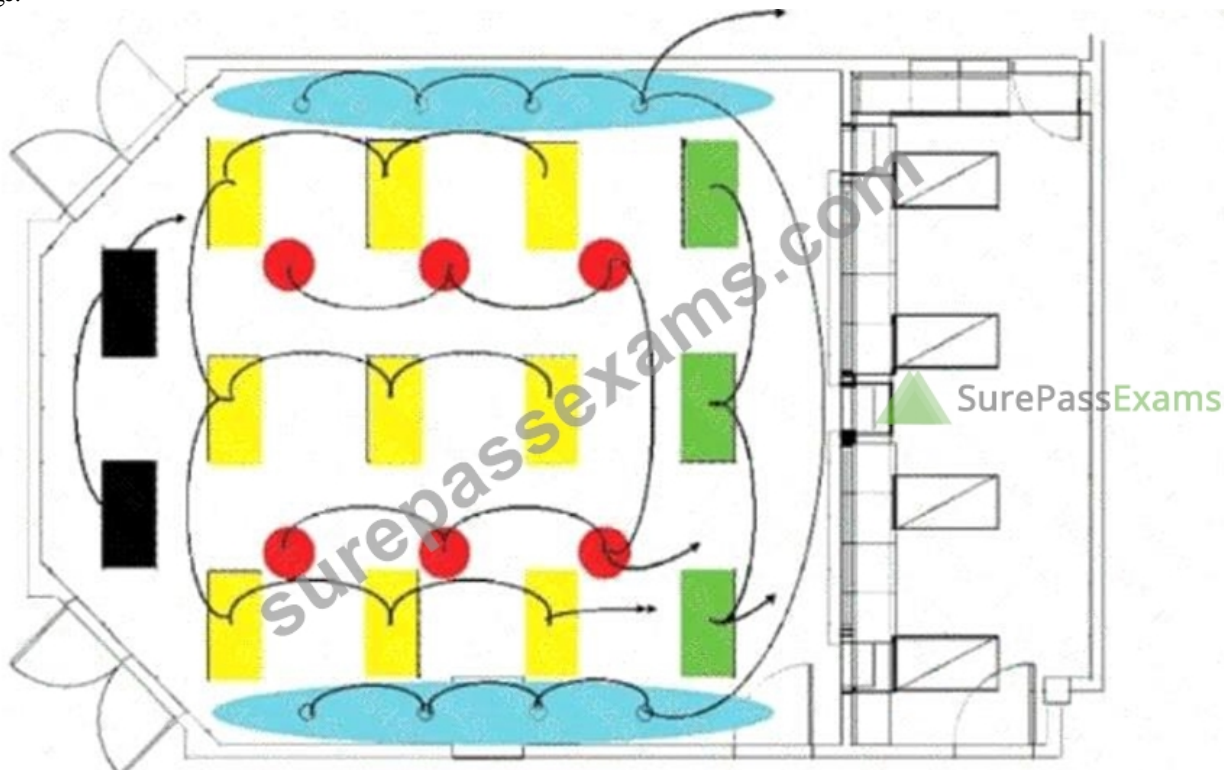

Explanation:

For optimal viewing comfort, the top of a display should not be positioned more than 30 degrees above the viewer's line of sight. This guideline ensures that viewers do not have to strain their necks to see the entire screen. While Options A and B might seem reasonable, 30 degrees is considered the upper limit for comfortable viewing, with viewers ideally positioned to see the full display without needing to look up excessively.

NEW QUESTION # 139

Image:

Based on this diagram, how many lighting zones are there?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

In the diagram, lighting zones are typically defined by separate control paths or groups of lights that are independently operated. Each uniquely grouped set of lights shown with a distinct wiring loop or pathway represents one lighting zone.

Upon analysis:

* There are 6 clearly delineated lighting zones, each represented by a different control path (black arrows or loops) connecting light fixtures.

* These zones correspond to:

* Front center lighting area (yellow boxes)

* Rear center lighting area (yellow boxes)

* Left aisle lighting (green)

* Right aisle lighting (green)

* Front curved lighting (blue)

* Rear curved lighting (blue)

Each of these zones serves a different function (e.g., audience areas, presentation zones, ambient or pathway lighting), which aligns with typical AV environment lighting zoning strategy.

According to the AVIXA CTS Exam Guide, 5th Edition - Chapter 8: Lighting and Control, it states:

"Lighting zones are separated based on control, purpose, and placement. Zoning enables flexible lighting control schemes for AV spaces such as classrooms, conference rooms, and auditoriums."

- AVIXA CTS Exam Guide, Chapter 8, p. 173-175
