CyberArk Defender - PAM PAM-DEF training materials are high-quality and high accuracy, since we are strict with the quality and the answers. We ensure you that PAM-DEF Exam Dumps are available, and the effectiveness can be also guarantees.

CyberArk Defender - PAM Sample Questions (Q59-Q64):

NEW QUESTION # 59
PSM captures a record of each command that was executed in Unix.

- A. FALSE
- B. TRIE

Answer: B

Explanation:
Explanation
PSM captures a record of each command that was executed in Unix by using the SSH text recorder. This is a feature that enables PSM to record all the keystrokes that are typed during privileged sessions on SSH connections, including Unix systems. The SSH

text recorder can be configured in the Platform Management settings for each platform that uses the SSH protocol. The text recordings are stored and protected in the Vault server and are accessible to authorized auditors. The text recordings can also be used for auditing and compliance purposes, as they provide a detailed trace of the actions performed by the users on the target systems1. References:
* 1: Introduction to PSM for SSH, How it works subsection, Text recordings paragraph

NEW QUESTION # 60
You are troubleshooting a PVWA slow response.
Which log files should you analyze first? (Choose two.)

- A. CyberArk.WebApplication.log
- B. ITALog.log
- C. CyberArk.WebConsole.log
- D. web.config

Answer: A,C

NEW QUESTION # 61
To use PSM connections while in the PVWA, what are the minimum safe permissions a user or group will need?

- A. List Accounts, Use Accounts, Retrieve Accounts, Access Safe without confirmation
- B. List Accounts, Use Accounts
- C. Use Accounts
- D. List Accounts, Use Accounts, Retrieve Accounts

Answer: B

NEW QUESTION # 62
Match each key to its recommended storage location.

Answer:

Explanation:

Explanation

Recovery Private Key		Store on the Vault Server Disk Drive
Recovery Public Key		Store in a Hardware Security Module
Server Key		Store in a Physical Safe
SSH Keys		Store in the Vault
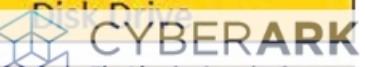

* The recommended storage locations for each key are as follows:
* Recovery Private Key: It is recommended to store the Recovery Private Key on the Vault Server Disk Drive. This is because the Recovery Private Key is used to decrypt the data stored in the Vault.
* Recovery Public Key: It is recommended to store the Recovery Public Key in a Hardware Security Module. This is because the Recovery Public Key is used to encrypt the data stored in the Vault.
* Server Key: It is recommended to store the Server Key in a Physical Safe. This is because the Server Key is used to open the Vault, much like the key of a physical Vault. The key is required to start the Vault, after which the Server Key can be removed until the Server is restarted. When the Vault is stopped, the information stored in the Vault is completely inaccessible without that key.
* SSH Keys: It is recommended to store the SSH Keys in the Vault. This is because the SSH Keys are used to connect to remote machines using the SSH protocol. The Vault can manage the passwords and sessions for the SSH Keys and provide secure access to the target systems.
References: Server keys - CyberArk, Cyberark Key Storage Plugin (Enterprise) - Rundeck

NEW QUESTION # 63
An auditor initiates a live monitoring session to PSM server to view an ongoing live session.
When the auditor's machine makes an RDP connection the PSM server, which user will be used?

- A. Credentials stored in the Vault for the target machine
- B. PSMAdminConnect
- C. PSMConnect
- D. Shadowuser

Answer: B

NEW QUESTION # 64
......
