

# 熱門的Workday-Prism-Analytics考古題更新和資格考試領先提供者和實踐中的Workday-Prism-Analytics考試指南

此外，這些NewDumps Workday-Prism-Analytics考試題庫的部分內容現在是免費的：<https://drive.google.com/open?id=14-lapetHrc3LrGiKlqG0fgEx0tTZEghd>

有些網站在互聯網上為你提供高品質和最新的Workday的Workday-Prism-Analytics考試學習資料，但他們沒有任何相關的可靠保證，在這裏我要說明的是這NewDumps一個有核心價值的問題，所有Workday的Workday-Prism-Analytics考試都是非常重要的，但在個資訊化快速發展的時代，NewDumps只是其中一個，為什麼大多數人選擇NewDumps，是因為NewDumps所提供的考題資料一定能幫助你通過測試，為什麼呢，因為它提供的資料都是最新的，這也是大多數考生通過實踐證明了的。

如果你擁有了NewDumps Workday的Workday-Prism-Analytics考試培訓資料，我們將免費為你提供一年的更新，這意味著你總是得到最新的考試認證資料，只要考試目標有所變化，以及我們的學習材料有所變化，我們將在第一時間為你更新。我們知道你的需求，我們將幫助得到Workday的Workday-Prism-Analytics考試認證的信心，讓你可以安然無憂的去參加考試，並順利通過獲得認證。

>> Workday-Prism-Analytics考古題更新 <<

## Workday-Prism-Analytics考試指南 - 最新Workday-Prism-Analytics題庫

NewDumps提供給你最權威全面的Workday-Prism-Analytics考試考古題，命中率極高，考試中會出現的問題可能都包含在這些考古題裏了，我們也會隨著大綱的變化隨時更新考古題。它可以避免你為考試浪費過多的時間和精力，

助你輕鬆高效的通過考試。即便您沒有通過考試，我們也將承諾全額退款！所以你將沒有任何損失。機會是留給有準備的人的，希望你不要錯失良機。

## 最新的 Reporting and Analytics Workday-Prism-Analytics 免費考試真題 (Q28-Q33):

### 問題 #28

You explode the Language Skills multi-instance field on your derived dataset and you want to change the business object that the new Language Skills Exploded instance field is mapped to. What steps should you take?

- A. Add a Manage Fields after the Explode stage and modify the business object.
- B. Click on the Related Actions next to the business object in the insight panel.
- C. Add a Manage Fields before the Explode stage and modify the business object.
- D. Select from the list of suggested BO values in the Explode stage configuration.

答案：A

#### 解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, the Explode stage transforms a multi-instance field (e.g., Language Skills) into multiple rows, creating a new single-instance field (e.g., Language Skills Exploded). The resulting field inherits the business object (BO) mapping from the original multi-instance field, but this mapping can be modified if needed. According to the official Workday Prism Analytics study path documents, to change the business object that the new Language Skills Exploded instance field is mapped to, you should add a Manage Fields stage after the Explode stage and modify the business object (option D).

The Manage Fields stage allows you to edit field properties, including the business object mapping, for the exploded field. After the Explode stage creates the new single-instance field, the Manage Fields stage can be used to reassign the business object by selecting a different Workday business object (e.g., changing from a generic object to a specific one like "Language"). This step ensures the field is mapped correctly for downstream reporting or integration with Workday reports.

The other options are incorrect:

\* A. Select from the list of suggested BO values in the Explode stage configuration: The Explode stage does not provide an option to modify business object mappings during its configuration; it focuses on exploding the multi-instance field.

\* B. Click on the Related Actions next to the business object in the insight panel: The insight panel provides metadata insights but does not allow direct modification of business object mappings for fields.

\* C. Add a Manage Fields before the Explode stage and modify the business object: Modifying the business object before the Explode stage affects the original multi-instance field, but the Explode stage will still create the new field with the inherited mapping, so this does not achieve the goal.

Adding a Manage Fields stage after the Explode stage is the correct approach to modify the business object mapping of the new exploded field.

### 問題 #29

You have two tables. One with employee data from Workday and another with learner data from an external system. Both tables have an Employee ID field.

In the Employee Data TBL, Employee ID is text.

□ In the Learner Data TBL, Employee ID is numeric.

□ How can you prepare to join these tables, without the potential loss of data?

- A. Change the field type of Employee ID directly on the Learner Data TBL from Numeric to Text.
- B. Change the field type of Employee ID directly on the Employee Data TBL from text to numeric.
- C. Import the Learner Data TBL into a DDS and change the field type of Employee ID from numeric to text using a Manage Fields stage.
- D. Import the Employee Data TBL into a DDS and change the field type of Employee ID from text to numeric using a Manage Fields stage.

答案：C

#### 解題說明：

In Workday Prism Analytics, joining two tables requires that the fields used in the join condition have compatible data types to avoid data mismatches or loss. The Employee Data TBL has an Employee ID field as text, while the Learner Data TBL has an Employee ID field as numeric. According to the official Workday Prism Analytics study path documents, to join these tables without potential data loss, the best approach is to convert the numeric Employee ID in the Learner Data TBL to text, as text fields can safely store numeric values as strings, but converting text to numeric risks data loss if the text field contains non-numeric characters (e.g., leading zeros or special characters).

The correct method is to import the Learner Data TBL into a Derived Dataset (DDS) and use a Manage Fields stage to change the field type of Employee ID from numeric to text (option D). This ensures that the Employee ID field in both tables is text, enabling a safe and accurate join without losing data. The Manage Fields stage in a DDS allows for field type transformations, which is the recommended approach for preparing data for joins in Prism Analytics.

The other options are less suitable:

\* A. Import the Employee Data TBL into a DDS and change the field type of Employee ID from text to numeric using a Manage Fields stage: Converting text to numeric risks data loss if the text field contains non-numeric values, which could lead to errors or missing records during the join.

\* B. Change the field type of Employee ID directly on the Employee Data TBL from text to numeric:

Direct field type changes on tables are not supported in Prism Analytics, and even if possible, this approach risks data loss for the same reason as option A.

\* C. Change the field type of Employee ID directly on the Learner Data TBL from Numeric to Text:

Direct field type changes on tables are not supported; field type transformations must be done in a DDS using a Manage Fields stage.

By converting the numeric Employee ID to text in a DDS, the join can be performed safely, preserving all data from both tables.

#### 問題 #30

You are a new Prism customer and you want to ensure the correct set of fields is brought into a derived dataset. When should you apply a Manage Fields stage?

- A. At the end of the Primary Pipeline of a published dataset.
- B. At the beginning of the primary pipeline of the Base Dataset.
- **C. At the beginning of the Primary Pipeline of the derived dataset.**
- D. After the dataset is published.

答案： C

#### 解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Manage Fields stage is used to control the fields in a dataset by renaming, hiding, or changing field types, among other actions. According to the official Workday Prism Analytics study path documents, to ensure the correct set of fields is brought into a derived dataset (DDS), the Manage Fields stage should be applied at the beginning of the Primary Pipeline of the derived dataset (option C).

Placing the Manage Fields stage early in the pipeline—right after the initial import stage (Stage 1)—allows you to define the field structure upfront, ensuring that subsequent transformation stages (e.g., Join, Filter, Calculate Field) operate on the desired set of fields. This approach helps maintain consistency and avoids unnecessary processing of fields that are not needed in later stages.

The other options are not optimal:

\* A. After the dataset is published: You cannot add transformation stages like Manage Fields after a dataset is published; transformations must be applied during the dataset's creation or editing.

\* B. At the end of the Primary Pipeline of a published dataset: Similar to option A, you cannot modify a published dataset's pipeline, and placing Manage Fields at the end would not prevent unnecessary fields from being processed in earlier stages.

\* D. At the beginning of the primary pipeline of the Base Dataset: A Base Dataset does not have a transformation pipeline; it is a direct import of a table, so Manage Fields stages can only be applied in a Derived Dataset.

Applying the Manage Fields stage at the beginning of the derived dataset's Primary Pipeline ensures efficient data preparation and transformation.

### 問題 #31

You are asked to produce a Prism data source, which is going to be used in a matrix report that should display the minimum, maximum, total, average, and the median purchase order amount by location and month. What should you do to achieve the desired result?

- A. Publish your detail data and build the summarizations in the advanced report.
- B. Add two Group By stages to your derived dataset.
- C. Add a Group By stage to your derived dataset.
- **D. Publish your detail data and build the summarizations in the matrix report.**

答案: D

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a matrix report in Workday is designed to display summarized data in a grid format, with built-in capabilities to calculate aggregations like minimum, maximum, total, average, and median. According to the official Workday Prism Analytics study path documents, to produce a Prism data source for a matrix report that needs to display the minimum, maximum, total, average, and median purchase order amount by location and month, you should publish your detail data and build the summarizations in the matrix report (option A).

Publishing the detail data (i.e., the raw purchase order data with fields like location, month, and amount) as a Prism data source allows the matrix report to access the granular data. The matrix report can then apply the required aggregations (MIN, MAX, SUM, AVG, MEDIAN) directly, grouping by location and month as specified in the report configuration. This approach leverages Workday's reporting capabilities, reducing the need for additional transformations in Prism and ensuring flexibility for future reporting needs.

The other options are less efficient:

\* B. Add a Group By stage to your derived dataset: A Group By stage in the derived dataset can compute some aggregations (e.g., SUM, AVG), but Prism does not natively support calculating the median in a Group By stage, and it would require multiple stages or calculated fields to compute all metrics, making it less practical than using the matrix report.

\* C. Publish your detail data and build the summarizations in the advanced report: While an advanced report can perform some summarizations, it is not as well-suited as a matrix report for displaying multiple aggregations (like median) in a grid format by location and month.

\* D. Add two Group By stages to your derived dataset: Using two Group By stages is unnecessary and still does not address the limitation of calculating the median in Prism, making this approach overly complex.

Publishing the detail data and letting the matrix report handle the summarizations is the most efficient and effective way to meet the requirements.

### 問題 #32

You want to use a custom report containing prompts as a source connection for a table. What must you ensure to make this possible?

- A. The prompts are marked as required.
- **B. The custom report prompts have default values assigned on the report definition.**
- C. The prompts are mapped at the data change task level.
- D. The report is built on an indexed data source.

答案: B

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when using a custom report with prompts as a source connection for a table, the custom report must be configured to ensure compatibility with the Prism data ingestion process. According to the official Workday Prism Analytics study path documents, the key requirement is that the custom report prompts have default values assigned in the report definition. This is necessary because Prism Analytics does not support interactive prompting during data ingestion. Default values ensure that the report can run automatically without requiring user input, allowing the Data Change task to retrieve the data consistently and load it into the target table.

The other options are not correct in this context:

\* A. The report is built on an indexed data source: While indexed data sources can enhance performance for certain reports, they are not a requirement for using a custom report as a source for a Prism table.

\* B. The prompts are mapped at the data change task level: Prompts are not mapped in the Data Change task; instead, the task relies on the report's default values to execute the data retrieval.

\* D. The prompts are marked as required: Marking prompts as required does not address the need for automatic execution; default values are still needed to avoid manual intervention.

By assigning default values to prompts in the custom report definition, the report can be seamlessly integrated as a source connection for Prism Analytics, ensuring reliable data loading into the table.
