Google Professional-Cloud-DevOps-Engineer Exam Practice | Professional-Cloud-DevOps-Engineer Latest Test Format

We want to finish long term objectives through customer satisfaction and we have achieved it already by our excellent Professional-Cloud-DevOps-Engineer exam questions. In this era of cut throat competition, we are successful than other competitors. What is more, we offer customer services 24/7. Even if you fail the exams, the customer will be reimbursed for any loss or damage after buying our Professional-Cloud-DevOps-Engineer Guide dump. One decision will automatically lead to another decision, we believe our Professional-Cloud-DevOps-Engineer guide dump will make you fall in love with our products and become regular buyers.

Google Professional-Cloud-DevOps-Engineer is a prestigious certification designed for IT professionals who are interested in pursuing a career in cloud-based DevOps engineering. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification is intended for experienced IT professionals who have an in-depth understanding of DevOps practices and principles and who are skilled in implementing and managing cloud-based solutions. Google Professional-Cloud-DevOps-Engineer Certification is designed to validate the skills required to design, develop, and manage DevOps pipelines that leverage Google Cloud technologies.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

Your company follows Site Reliability Engineering practices. You are the person in charge of Communications for a large, ongoing incident affecting your customer-facing applications. There is still no estimated time for a resolution of the outage. You are receiving emails from internal stakeholders who want updates on the outage, as well as emails from customers who want to know what is happening. You want to efficiently provide updates to everyone affected by the outage. What should you do?

- A. Focus on responding to internal stakeholders at least every 30 minutes. Commit to "next update" times.
- B. Provide periodic updates to all stakeholders in a timely manner. Commit to a "next update" time in all communications.
- C. Provide all internal stakeholder emails to the Incident Commander, and allow them to manage internal communications. Focus on providing responses directly to customers.
- **D. Delegate the responding to internal stakeholder emails to another member of the Incident Response Team. Focus on providing responses directly to customers.**

Answer: D

NEW QUESTION # 36

Your organization recently adopted a container-based workflow for application development. Your team develops numerous applications that are deployed continuously through an automated build pipeline to a Kubernetes cluster in the production environment. The security auditor is concerned that developers or operators could circumvent automated testing and push code changes to production without approval. What should you do to enforce approvals?

- **A. Enable binary authorization inside the Kubernetes cluster and configure the build pipeline as an attestor.**
- B. Leverage Kubernetes Role-Based Access Control (RBAC) to restrict access to only approved users.
- C. Use an Admission Controller to verify that incoming requests originate from approved sources.
- D. Configure the build system with protected branches that require pull request approval.

Answer: A

NEW QUESTION # 37

You are monitoring a service that uses n2-standard-2 Compute Engine instances that serve large files. Users have reported that downloads are slow. Your Cloud Monitoring dashboard shows that your VMS are running at peak network throughput. You want to improve the network throughput performance. What should you do?

- A. Deploy a Cloud NAT gateway and attach the gateway to the subnet of the VMS.
- B. Deploy the Ops Agent to export additional monitoring metrics.
- **C. Change the machine type for your VMS to n2-standard-8.**
- D. Add additional network interface controllers (NICs) to your VMS.

Answer: C

NEW QUESTION # 38

You support a high-traffic web application with a microservice architecture. The home page of the application displays multiple widgets containing content such as the current weather, stock prices, and news headlines. The main serving thread makes a call to a dedicated microservice for each widget and then lays out the homepage for the user. The microservices occasionally fail; when that happens, the serving thread serves the homepage with some missing content. Users of the application are unhappy if this degraded mode occurs too frequently, but they would rather have some content served instead of no content at all. You want to set a Service Level Objective (SLO) to ensure that the user experience does not degrade too much. What Service Level Indicator (SLI) should you use to measure this?

- A. A quality SLI: the ratio of non-degraded responses to total responses
- **B. An availability SLI: the ratio of healthy microservices to the total number of microservices**
- C. A latency SLI: the ratio of microservice calls that complete in under 100 ms to the total number of microservice calls
- D. A freshness SLI: the proportion of widgets that have been updated within the last 10 minutes

Answer: B

NEW QUESTION # 39

You have a pool of application servers running on Compute Engine. You need to provide a secure solution that requires the least amount of configuration and allows developers to easily access application logs for troubleshooting. How would you implement the solution on GCP?

- **A. * Deploy the Stackdriver logging agent to the application servers.* Give the developers the IAM Logs Viewer role to access Stackdriver and view logs.**
- B. * Deploy the Stackdriver logging agent to the application servers.* Give the developers the IAM Logs Private Logs Viewer role to access Stackdriver and view logs.
- C. * Install the gsutil command line tool on your application servers.* Write a script using gsutil to upload your application log to a Cloud Storage bucket, and then schedule it to run via cron every 5 minutes.* Give the developers IAM Object Viewer access to view the logs in the specified bucket.
- D. * Deploy the Stackdriver monitoring agent to the application servers.* Give the developers the IAM Monitoring Viewer role to access Stackdriver and view metrics.

Answer: A

NEW QUESTION # 40

.....

Just as an old saying goes, it is better to gain a skill than to be rich. Contemporarily, competence far outweighs family backgrounds and academic degrees. One of the significant factors to judge whether one is competent or not is his or her Professional-Cloud-DevOps-Engineer certificates. Generally speaking, Professional-Cloud-DevOps-Engineer certificates function as the fundamental requirement when a company needs to increase manpower in its start-up stage. In this respect, our Professional-Cloud-DevOps-Engineer practice materials can satisfy your demands if you are now in preparation for a Professional-Cloud-DevOps-Engineer certificate.
