Our AP-219 study materials can help you pass test faster. You can take advantage of the certification. Many people improve their ability to perform more efficiently in their daily work with the help of our AP-219 Exam Questions and you can be as good as they are.

## Salesforce Order Management Administrator Accredited Professional Sample Questions (Q40-Q45):

### NEW QUESTION # 40

Which two practices are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects?

- A. The types must be an exact match (i.e. String to String)
- B. The names must only contain letters and underscores
- C. The types must match within reason

- D. The names must be an exact match

**Answer: C,D**

Explanation:

Two practices that are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects are:  
The types must match within reason. The data type of the custom attribute in Order Management must match or be compatible with the data type of the corresponding attribute in the external system, such as B2C Commerce or B2B Commerce. For example, if the attribute is a string in B2C Commerce, it must also be a string in Order Management.

The names must be an exact match. The name of the custom attribute in Order Management must be exactly the same as the name of the corresponding attribute in the external system, including capitalization and punctuation. For example, if the attribute is named "kitItem" in B2C Commerce, it must also be named "kitItem" in Order Management.

#### NEW QUESTION # 41

An Order Summary has three Fulfillment Orders and two Credit Memos associated with it. How many Invoices will be created when using the Create Invoice Apex action in a flow?

- A. 2.0
- B. 3.0
- C. 5.0
- D. 1.0

**Answer: D**

Explanation:

One invoice will be created when using the Create Invoice Apex action in a flow. The Create Invoice Apex action is a custom action that creates an invoice for an order summary. An invoice is a document that requests payment from a customer for an order. An invoice can include one or more fulfillment orders and one or more credit memos. A fulfillment order is a record that represents a part of an order that is fulfilled by a specific location. A credit memo is a record that represents a partial or full refund for an order or a fulfillment order. An order summary can have multiple fulfillment orders and credit memos associated with it, but only one invoice will be created for the entire order summary. Reference: Order Management Objects, [Create Invoice Apex Action]

#### NEW QUESTION # 42

The order object represents which two statements? (Choose 2)

- A. The customer's intent at the time of purchase
- B. The invoice data for accounting purposes
- C. An overall summary of the order being processed
- D. The initial exchange of funds for goods or services

**Answer: A,D**

#### NEW QUESTION # 43

An administrator has created a screen flow for users to create accounts. Some users have complained that they do not always have all the required data to create the account and lost progress when they leave the flow. What two steps should the administrator take to prevent lost progress? Choose 2

- A. Add the paused flows component to the home page
- B. Enable paused flows in process automation settings in setup
- C. Ask a developer to create a lightning component to pause the flow
- D. Add a pause button to the footer of the screen flow

**Answer: A,B**

#### NEW QUESTION # 44

What are two reasons for using Flows instead of Apex code?

- A. Flows have better performance options for large batches of records
- B. Flows provide a visual debug process
- C. Flows can be modified and created without a developer
- D. Flows can be triggered by undelete events

**Answer: B,C**

Explanation:

Two reasons for using Flows instead of Apex code are:

Flows can be modified and created without a developer. Flows are declarative tools that allow administrators to build complex business logic using clicks instead of code. Flows do not require any programming skills or knowledge, and they can be easily modified and maintained by administrators.

Flows provide a visual debug process. Flows have a built-in debugger that allows administrators to test and troubleshoot their flows in a graphical interface. The debugger shows the flow execution path, the values of variables and sObject fields, and any errors or warnings that occur in the flow.
