NEW QUESTION # 52
Refer to the exhibit. You want to configure SD-WAN on a network as shown in the exhibit. The network contains many FortiGate devices. Some are used as NGFW, and some are installed with extensions such as FortiSwitch, FortiAP or FortiExtender. What should you consider when planning your deployment?

SD-WAN Network Topology

- A. You must build multiple SD-WAN topologies. Each topology must contain only one type of extension.
- B. You can build an SD-WAN topology that includes all devices. The hubs must be devices without extensions.
- C. You must use FortiManager to manage your SD-WAN topology.
- D. You can build an SD-WAN topology that includes all devices. The hubs can be FortiGate devices with FortiExtender.

Answer: D

Explanation:
FortiGate devices with FortiExtender can act as hubs in an SD-WAN topology. FortiGate supports SD-WAN integration across diverse setups - including those using FortiSwitch, FortiAP, and FortiExtender - as long as the topology and roles are properly defined.

NEW QUESTION # 53
In which SD-WAN template field can you use a metadata variable?

NEW QUESTION # 56
SD-WAN interacts with many other FortiGate features. Some of them are required to allow SD-WAN to steer the traffic.
Which three configuration elements that you must configure before FortiGate can steer traffic according to SD-WAN rules? (Choose three.)

- A. Traffic shaping
- B. Routing
- C. Firewall policies
- D. Interfaces
- E. Security profiles

Answer: B,C,D

Explanation:
Before FortiGate can steer traffic according to SD-WAN rules, certain configuration elements must be present. The guide states: "SD-WAN is not a standalone feature and interacts with several fundamental FortiGate configurations.
Specifically, you must: (1) Define the interfaces (physical, VLAN, or IPsec) that will act as SD-WAN members, (2) Create firewall policies to allow traffic to be steered by SD-WAN, and (3) Set up routing so that traffic has valid routes via SD-WAN members. Without these, SD-WAN rules will not be able to match or steer any traffic." Security profiles and traffic shaping are not mandatory for basic SD-WAN steering but can be layered on for enhanced security and QoS once foundational elements are present.
