Free PDF CheckPoint - Authoritative 156-315.81 - New Check Point Certified Security Expert R81 Exam Book

We keep a close watch at the most advanced social views about the knowledge of the test CheckPoint certification. Our experts will renovate the test bank with the latest 156-315.81 study materials and compile the latest knowledge and information into the questions and answers. In the answers, our experts will provide the authorized verification and detailed demonstration so as to let the learners master the latest information timely and follow the trend of the times. All we do is to integrate the most advanced views into our 156-315.81 Study Materials.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q123-Q128):

NEW QUESTION # 123

What is considered Hybrid Emulation Mode?

- A. Manual configuration of file types on emulation location.
- **B. Load sharing of emulation between an on premise appliance and the cloud.**
- C. High availability between the local SandBlast appliance and the cloud.
- D. Load sharing between OS behavior and CPU Level emulation.

Answer: B

NEW QUESTION # 124

As an administrator, you may be required to add the company logo to reports. To do this, you would save the logo as a PNG file with the name 'cover-company-logo.png' and then copy that image file to which directory on the SmartEvent server?

- A. \$RTDIR/smartevent/conf
- B. \$FWDIR/smartview/conf
- C. SFWDIR/smartevent/conf
- **D. \$RTDIR/smartview/conf**

Answer: D

Explanation:

To add the company logo to reports, you would save the logo as a PNG file with the name 'cover-company-logo.png' and then copy that image file to the \$RTDIR/smartview/conf directory on the SmartEvent server. The \$RTDIR is an environment variable that points to the runtime directory of the SmartEvent server, which is usually /opt/CPrt-R81. The smartview/conf directory contains the configuration files for SmartView, which is a web-based interface for viewing reports and dashboards generated by SmartEvent. Reference: SmartEvent Administration Guide, SK120193 - How to add a company logo to SmartView reports

NEW QUESTION # 125

Selecting an event displays its configurable properties in the Detail pane and a description of the event in the Description pane. Which is NOT an option to adjust or configure?

- A. Severity
- **B. Policy**
- C. Threshold
- D. Automatic reactions

Answer: B

Explanation:

An event is a notification that something significant has occurred on a Check Point product or network. Events are generated by various sources, such as blades, gateways, servers, SmartEvent, etc. You can view and manage events in SmartConsole by using the Events tab in the Logs & Monitor view. Selecting an event displays its configurable properties in the Detail pane and a description of the event in the Description pane. The configurable properties include:

Severity: The level of importance or urgency of the event. You can change the severity of an event by selecting a different value from the drop-down list.

Automatic reactions: The actions that are triggered when an event occurs. You can add, edit, or delete automatic reactions for an event by clicking on the + icon or the pencil icon.

Threshold: The minimum number or frequency of occurrences of an event that triggers an automatic reaction. You can change the threshold of an event by entering a different value in the text box.

The policy is not an option to adjust or configure for an event. The policy is a set of rules that define how to handle events based on their source, type, severity, etc. You can create and manage policies in SmartEvent by using the Policies tab in the Logs & Monitor view. NEW QUESTION # 126

Which Check Point process provides logging services, such as forwarding logs from Gateway to Log Server, providing Log Export API (LEA) & Event Logging API (EL-A) services.

- A. CPD

- B. CPVIEWD
- **C. FWD**
- D. DASSERVICE

Answer: C

Explanation:

Explanation

The FWD process provides logging services, such as forwarding logs from Gateway to Log Server, providing Log Export API (LEA) and Event Logging API (EL-A) services. The FWD process is responsible for sending logs from the Security Gateway to the Security Management Server or Log Server, and for fetching logs from the Security Management Server or Log Server to SmartConsole. The FWD process also handles the communication with external logging applications that use the LEA or EL-A protocols.

NEW QUESTION # 127

At what point is the Internal Certificate Authority (ICA) created?

- A. When an administrator decides to create one.
- **B. During the primary Security Management Server installation process.**
- C. Upon creation of a certificate.
- D. When an administrator initially logs into SmartConsole.

Answer: B

Explanation:

Explanation

The Internal Certificate Authority (ICA) is created during the primary Security Management Server installation process. The ICA is responsible for issuing and managing certificates for all Check Point components in the network. The ICA is automatically installed as an integral part of the Security Management Server and can be managed from SmartConsole. References: R81 Security Management Administration Guide, page 113.

NEW QUESTION # 128

.....

PrepAwayExam 156-315.81 desktop and web-based practice exams are distinguished by their excellent features. The 156-315.81 web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop CheckPoint 156-315.81 Practice Test software. You won't require a live internet connection to use the desktop CheckPoint exam simulation software once you've verified the product's license.
