You will perform well in the Canadian Securities Course Exam2, CSC2 exam and produce the best results.

CSI Canadian Securities Course Exam2 Sample Questions (Q19-Q24):

NEW QUESTION # 19

For what type of company is the dividend discount model least applicable?

- A. One with changing dividend payments and a fluctuating dividend growth rate.
- B. One with stable dividend payments and a stable dividend growth rate.
- C. One with stable dividend payments and a fluctuating dividend growth rate.
- D. One with changing dividend payments and a stable dividend growth rate.

Answer: A

Explanation:

The dividend discount model (DDM) is based on the premise that a company's intrinsic value is the present value of all future dividends. This model works best when:

- * Dividends are stable or follow a predictable growth rate.
- * The company has an established dividend payout history.
- * Inapplicability to Fluctuating Dividend Patterns: A company with changing dividend payments and fluctuating growth rates lacks the consistency required for the DDM. The fluctuating nature introduces uncertainty, making it difficult to estimate future dividends accurately. This diminishes the model's reliability in valuing such companies.
- * Comparison with Other Options:

- * Option A: Changing dividend payments but a stable growth rate could still provide a predictable valuation framework using DDM.
 - * Option B: Stable dividends and a stable growth rate align perfectly with DDM assumptions.
 - * Option C: Stable dividends and fluctuating growth rates are more predictable than Option D.
- Supporting Study Material References:
- * Volume 2, Chapter 13 (Fundamental Analysis): Explains the relevance of consistent dividend patterns in equity valuation, emphasizing

NEW QUESTION # 20

A client recently sold her holdings in JKL Equity Fund. The client's transactions in the fund are Summarized below:

□ What is the client's capital gain from the sale of the fund in Year 47?

- A. \$2,509.63
- B. \$1,155.25
- C. \$1,839.00
- **D. \$1,168.37**

Answer: D

NEW QUESTION # 21

What do technical analysis and fundamental analysis have in common?

- **A. They are used to predict changes in security prices.**
- B. They are nullified according to the random walk theory.
- C. They compare the intrinsic value against a security's current price.
- D. They study the causes of security's price movements.

Answer: A

Explanation:

Both technical analysis and fundamental analysis are tools used to predict changes in security prices, but they differ significantly in their approaches.

* Fundamental Analysis evaluates the intrinsic value of a security by analyzing factors such as a company's financial statements, industry conditions, and macroeconomic trends. It assumes that market prices will eventually reflect a security's true value.

* Technical Analysis examines historical price and volume data to predict future price movements. It focuses on identifying patterns, trends, and market sentiment without regard to the underlying fundamentals.

Option A is incorrect because it only describes fundamental analysis. Option B erroneously connects both methodologies to the random walk theory, which discounts their effectiveness. Option D misstates their purpose, as technical analysis focuses on price trends, not the causes of price movements.

:

Volume 2, Chapter 13: Fundamental and Technical Analysis, Overview of Fundamental and Technical Analysis, Canadian Securities Course.

NEW QUESTION # 22

What obligation does an IA have when communicating information about a preliminary prospectus to prospective investors?

- A. The IA must provide a greensheet
- B. The IA must ensure 3 proxy is mailed to the investors to vote for approval or disapproval of the offering.
- **C. The IA must record the names addresses of those who have requested and received a preliminary prospectus**
- D. The IA must make a tombstone advertisement.

Answer: C

Explanation:

Investment advisors (IAs) are required to record the names and addresses of all individuals who have requested and received a preliminary prospectus. This ensures compliance with securities regulations and provides a record for follow-ups and potential disclosures related to the offering.

* A. The IA must ensure a proxy is mailed: Proxy voting is related to shareholder meetings, not the prospectus distribution.

- * B. The IA must provide a greensheet: A greensheet is used internally by investment firms, not distributed to clients.
- * C. The IA must make a tombstone advertisement: Tombstone advertisements are created by the issuer, not the IA.

NEW QUESTION # 23

Pierre has been plotting the price behaviour of QLT using a 100-day moving average. The 100-day moving average line has been above the daily market price for several weeks. However, the price of QLT broke through the moving average line with heavy trading volume, and the moving average line is moving higher.

What action should Pierre take based on this information?

- A. Buy QLT shares
- B. Sell call option on QLT shares
- C. Sell QLT shares
- D. Buy put option on QLT shares

Answer: A

NEW QUESTION # 24

.....
