## GH-200 Dumps Collection | Interactive GH-200 Course

As the content of the GH-200 exam is changing from time to time, you may feel anxious that it seems too hard to know the changes. Now, all complicate tasks have been done by our experts. They have rich experience in predicating the GH-200 exam. Then you are advised to purchase the study materials on our websites. Also, you can begin to prepare the GH-200 Exam. You are advised to finish all exercises of our GH-200 preparation questions and pass the exam by the first attempt very easily.

### Microsoft GitHub Actions Sample Questions (Q96-Q101):

#### NEW QUESTION # 96

Disabling a workflow allows you to stop a workflow from being triggered without having to delete the file from the repo. In which scenarios would temporarily disabling a workflow be most useful? (Choose two.)

- A. A workflow error produces too many, or wrong, requests, impacting external services negatively.
- B. A workflow sends requests to a service that is down.
- C. A runner needs to have diagnostic logging enabled.
- D. A workflow is configured to run on self-hosted runners
- E. A workflow needs to be changed from running on a schedule to a manual trigger

**Answer: A,B**

Explanation:

If a workflow depends on an external service that is down, disabling the workflow temporarily will prevent it from running and

sending requests to the service, thus avoiding failed requests or unnecessary retries.

If a workflow is causing a negative impact on external services by generating too many requests or incorrect data due to a bug, temporarily disabling the workflow will stop this behavior while the issue is fixed.

#### NEW QUESTION # 97

Disabling a workflow allows you to stop a workflow from being triggered without having to delete the file from the repo. In which scenarios would temporarily disabling a workflow be most useful?

(Each correct answer presents a complete solution. Choose two.)

- A. A workflow error produces too many, or wrong, requests, impacting external services negatively.
- B. A workflow sends requests to a service that is down.
- C. A runner needs to have diagnostic logging enabled.
- D. A workflow is configured to run on self-hosted runners.
- E. A workflow needs to be changed from running on a schedule to a manual trigger.

**Answer: A,B**

Explanation:

Temporarily disabling a workflow can be useful in many scenarios. These are a few examples where disabling a workflow might be helpful:

[B] A workflow error that produces too many or wrong requests, impacting external services negatively.

A workflow that is not critical and is consuming too many minutes on your account.

[D] A workflow that sends requests to a service that is down.

Workflows on a forked repository that aren't needed (for example, scheduled workflows).

#### NEW QUESTION # 98

As a developer, you need to integrate a GitHub Actions workflow with a third-party code quality provider that uses the Checks API. How should you trigger a follow-up workflow?

- A. Add the pull\_request webhook event as a trigger for the workflow when the code quality integration is synchronized
- B. Add the workflow\_run webhook event as a trigger for the workflow for the code quality integration name
- C. Add the check\_run webhook event as a trigger for the workflow when the code quality integration is completed
- D. Add the deployment webhook event as a trigger for the workflow when the code quality integration is completed

**Answer: C**

Explanation:

The check\_run event is triggered when a check (such as a code quality check) completes, including when the status of a check changes. By adding this event as a trigger, you can initiate a follow-up workflow when the code quality integration finishes its checks.

#### NEW QUESTION # 99

Which of the following scenarios requires a developer to explicitly use the GITHUB\_TOKEN or github.token secret within a workflow? (Choose two.)

- A. checking out source code with the actions/checkout@v3 action
- B. making an authenticated GitHub API request
- C. passing the GITHUB\_TOKEN secret to an action that requires a token as an input
- D. assigning non-default permissions to the GITHUB\_TOKEN

**Answer: B,C**

Explanation:

Some actions may require a GITHUB\_TOKEN as an input to authenticate and perform specific tasks, such as creating issues, commenting on pull requests, or interacting with the GitHub API. In such cases, you would need to explicitly pass the token to the action.

When making an authenticated GitHub API request, the GITHUB\_TOKEN is required to authenticate the request. This token is

automatically provided by GitHub in the workflow, and it must be explicitly used when interacting with the GitHub API.

### NEW QUESTION # 100

Which workflow command would output the debug message "action successfully debugged"?

- A. echo "debug-action successfully debugged"
- B. echo ":debug:action successfully debugged:"
- C. echo "::debug:action successfully debugged"
- D. echo :debug:message=action successfully debugged"

**Answer: C**

Explanation:

The ::debug: syntax is used to output debug messages in GitHub Actions workflows. This command will print the message "action successfully debugged" in the debug logs when the workflow runs.

### NEW QUESTION # 101

.....

As a reliable company providing professional IT certificate exam materials, we not only provide quality guaranteed products for GH-200 exam software, but also offer high quality pre-sale and after-sale service. Our online service will give you 24/7 online support. If you have any question about GH-200 exam software or other exam materials, or any problem about how to purchase our products, you can contact our online customer service directly. Besides, during one year after you purchased our GH-200 Exam software, any update of GH-200 exam software will be sent to your mailbox the first time.
