Cisco Designing Cisco Security Infrastructure Sample Questions (Q15-Q20):

NEW QUESTION # 15
Which two solutions help ensure consistent policy enforcement across multi-cloud workloads?
(Choose two.)

- A. Static IP routing
- B. Cisco Secure Workload (Tetration)
- C. SNMP traps
- D. Cloud-delivered Firewall (CDFW)

Answer: B,D

Explanation:
Cisco Secure Workload provides workload visibility and policy enforcement across environments, while cloud-delivered firewalls apply consistent security policies across multiple cloud platforms.

NEW QUESTION # 16
Which tool is used by SOC analyst to quarantine an endpoint?

- A. load balancer
- B. Cisco XDR
- C. syslog
- D. flow collector

Answer: B

Explanation:
Cisco XDR (Extended Detection and Response) gives SOC analysts the ability to detect, investigate, and quarantine compromised endpoints. It integrates telemetry across endpoints, network, and cloud, enabling coordinated response actions.

NEW QUESTION # 17
A developer is building new API functions for a cloud-based application. Before writing the code, the developer wants to ensure that destructive actions, including deleting and updating data, are properly protected by access control identifying sensitive fields such as those that contain passwords or personally identifiable information. Which approach must be used to score the risks proactively?

- A. SAST
- B. SBOM Generation
- C. CSPM
- D. Open API Specification Analysis

Answer: D

Explanation:
Open API Specification Analysis evaluates API definitions before code is written, identifying risky endpoints (such as delete or update functions) and sensitive fields (like PII or passwords). This allows developers to proactively score risks and apply proper access controls early in the design phase.

NEW QUESTION # 18
A financial company uses a remote access solution that directs all traffic over a secure tunnel.
The company recently received some large ISP bills from the headcounter location. According to traffic analysis during the investigation, most of the network traffic was due to employees spending a lot of time on video conferences provided by a SaaS collaboration company. What must the company modify to reduce the cost without negatively impacting security or employee

experience?

- A. Block the video conferencing app when connected on VPN.
- B. Reduce the video resolution size permitted within the SaaS application.
- C. Split-exclude the video SaaS application from the VPN.
- D. Suggest users to disconnect from the VPN when on video calls.

Answer: C

Explanation:
Split-exclusion allows trusted SaaS traffic (such as video conferencing) to bypass the VPN tunnel while keeping all other traffic secured. This reduces bandwidth costs at the headend location without degrading security or employee experience, since traffic to the SaaS provider is still encrypted natively.

NEW QUESTION # 19
Employees in a healthcare organization could not access their devices when they returned to work after the weekend. The security team discovered that a threat actor had encrypted the devices. Which security solution would mitigate the risk in future?

- A. password policy enforcement
- B. network configuration management
- C. data loss prevention
- D. endpoint detection and response

Answer: D

Explanation:
Endpoint Detection and Response (EDR) provides continuous monitoring, detection, and automated response to suspicious activity on devices. It can identify and stop ransomware attacks before encryption occurs, mitigating the risk of device lockouts in the future.
