When it was applied to the live environment, the dial-out telemetry streams are not being sent. Which step is missing to configure a Cisco IOS XR router for telemetry streams dial-out?

```

- A. subscription activation
- B. destination-group activation
- C. destination-group configuration
- D. subscription configuration

Answer: C

Explanation:

The configuration in the exhibit shows sensor-groups and subscriptions, but for telemetry dial-out to function, you must also configure a destination-group (to define where to send the telemetry data). The subscriptions reference the destination-group (e.g., destination-id test), but the actual destination-group configuration is missing. Without it, the router does not know where to send the telemetry data streams.
