Perfect Certification C1000-189 Exam Infor–Find Shortcut to Pass C1000-189 Exam

What's more, part of that ITPassLeader C1000-189 dumps now are free: https://drive.google.com/open?id=1_3Q9fyJ1gRB6h_qUuVkeD42OZH6t47mx

Ready to take the next level in your IBM career? Pass the IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) exam with our updated C1000-189 exam dumps. Too often, candidates struggle to find credible study materials and end up wasting resources on outdated material. But with our platform, you can access real IBM C1000-189 Practice Questions in three formats - PDF, web-based practice exams, and desktop practice test software. Whether you prefer to study on your smart device or offline on your computer, we have the tools you need to succeed.

IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	• Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.
Topic 2	• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.

Topic 3	• Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.

Dumps C1000-189 Free | C1000-189 Braindumps Torrent

Our C1000-189 learning questions are always the latest and valid to our loyal customers. We believe this is a basic premise for a company to continue its long-term development. The user passes the C1000-189 exam and our market opens. This is a win-win situation. Or, you can use your friend to find a user who has used our C1000-189 Guide quiz. In fact, our C1000-189 study materials are very popular among the candidates. And more and more candidates are introduced by their friends or classmates.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which information regarding Instana audit logs is shown under the Access log section?

- A. API token creation
- B. User Login/Logout
- C. New event triggers
- D. Adding a new user

Answer: B

Explanation:
Audit logging is a core component of security compliance within IBM Instana. The Access Logs, a section under Audit Logs, are specifically designed to capture and display authentication-related events. IBM states: "Access logs in Instana record user login and logout activity, including timestamps, user IDs, and source IP addresses." This capability supports auditing, regulatory needs, and incident response by ensuring verifiable tracking of system access. Instana separates audit events into categories for clarity: user actions, configuration edits, and security operations, with host-based access details residing in the 'Access Logs' view. This delineation enables administrators to spot unauthorized or suspicious access attempts quickly. Additions of new users or API tokens fall under distinct event categories ('User Management' and 'API Audit Logs') but not under the Access logs specifically. Through its clear segregation of logs by purpose, Instana ensures that organizations maintain compliance with frameworks like ISO 27001, SOC 2, and internal IT governance policy, as access auditability provides both transparency and accountability across multi-user environments.

NEW QUESTION # 35
Which statement best describes BeeInstana?

- A. An operator that can be used only on self-hosted deployments that have data stores installed
- B. A Kubernetes operator that requires high-performing data stores and a distributed data store cluster.
- C. An operator that can be used to install Instana on Kubernetes
- D. It is a metric database used to perform complex metric queries

Answer: B

Explanation:
BeeInstana is identified in Instana's documentation as the core Kubernetes operator driving distributed installation and management of Instana components. The documentation defines: "BeeInstana is a Kubernetes operator that requires robust, high-performing distributed data stores and manages Instana deployment complexity, resource allocation, and scaling within large clusters." By leveraging Kubernetes-native constructs, BeeInstana orchestrates Instana backend, UI, sensors, and streaming components-ensuring

reliable, scalable deployments for enterprise settings. The operator orchestrates failover, recovery, and persistent storage management, supporting self-hosted and hybrid installations. While it is associated with metric data handling, its main role is orchestration and operational management based on distributed database infrastructures. Simple operator installation (A, D) does not capture its full role, and describing BeeInstana as only a metric database (B) misrepresents its architectural function in Instana's platform lifecycle.

NEW QUESTION # 36
Which statement accurately describes the use of the agent key?

- A. It is required only for downloading the license.
- B. It is used for both downloading Instana artifacts and deploying an instance.
- C. It is not included in the purchase email and must be obtained separately.
- D. It is used only for deploying an instance.

Answer: B

Explanation:
The IBM Instana Observability product architecture uses a security credential called an agent key for authentication and authorization in both installation and deployment operations. The documentation explicitly affirms: "The agent key must be used for downloading Instana installation artifacts from IBM repositories as well as for deploying agents to connect to the backend." This binding ensures entitlement enforcement and integrity of data transfer. The key, distributed through official IBM entitlement channels or purchase confirmation emails, validates the customer's licensed environment. During deployment, the same key is included in configuration files or environment variables so that each agent securely authenticates to its assigned backend instance. This unified mechanism simplifies lifecycle management while maintaining strong license controls. The key is never generated manually nor limited to licensing download alone-its dual purpose makes it critical in both provisioning and operations stages.

NEW QUESTION # 37
What is mandatory to use Instana REST APIs?

- A. CURL
- B. Token
- C. Python
- D. Cookie

Answer: B

Explanation:
Access to Instana's REST API is secured using authorization tokens-an industry-standard best practice for API authentication and traceability. IBM documentation says: "A personal or team API token is required to authenticate REST API calls." Tokens serve as credentials embedded in HTTP headers on each request, providing both identity and access control for the API consumer. Tokens are mandatory; without a valid token, any API requests are denied with a 401 Unauthorized error, regardless of whether a tool (such as CURL) is used. Tokens can be scoped for individual users (personal tokens) or teams (team tokens), enabling granular tracking and revocation as part of enterprise security policies. API tokens are generated from the Instana UI under the profile or team section. Cookies and raw client libraries (e.g., Python) are not authentication methods for Instana APIs.

NEW QUESTION # 38
Which tool does Instana use to provide geographical data by mapping user IP addresses?

- A. Geo Application Service
- B. GeoLite2 database
- C. Universal Geo database
- D. Google Maps API

Answer: B

Explanation:
IBM Instana leverages the open-source and widely recognized GeoLite2 database for mapping user IP addresses to their approximate physical locations in synthetic and real user monitoring scenarios. The documentation details: "Instana provides

geographical and location metadata based on the GeoLite2 database, which is regularly updated for improved accuracy and privacy compliance." GeoLite2 is a MaxMind-developed database providing country, city, region, and sometimes ISP-level information from IP addresses. Using an on-premise and regularly-curated geo database ensures no end-user data is ever transmitted to external or third-party web mapping services (such as Google Maps), maintaining strong data privacy and compliance for enterprise customers. Other listed tools are not native to Instana's geo lookup implementation.

NEW QUESTION # 39

......

Almost every IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) test candidate nowadays is confused about the IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) study material. They don't know where to download updated C1000-189 questions that can help them prepare quickly for the IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) test. Some rely on outdated IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) questions and suffer from the loss of money and time.
