

Free PDF Quiz Salesforce - Integration-Architect - Unparalleled Salesforce Certified Integration Architect Latest Dumps Ppt

BONUS!!! Download part of ExamPrepAway Integration-Architect dumps for free: https://drive.google.com/open?id=1wqxFojm-mQPwAwjtRLH-_9kX7MfibB0K

You have the option to change the topic and set the time according to the actual Salesforce Certified Integration Architect (Integration-Architect) exam. The Salesforce Certified Integration Architect (Integration-Architect) practice questions give you a feeling of a real exam which boost confidence. Practice under real Salesforce Certified Integration Architect (Integration-Architect) exam situations is an excellent way to learn more about the complexity of the Salesforce Certified Integration Architect (Integration-Architect) exam dumps. You can learn from your Salesforce Certified Integration Architect (Integration-Architect) practice test mistakes and overcome them before the actual Integration-Architect exam.

When it comes to Integration-Architect exam, many candidates are lack of confidence to pass it. But we all know self-confidence is the spiritual pillar of a person as well as the inherent power, which is of great importance and value to a person who want to pass the Integration-Architect exam. Our material include free Demo, you can go for free it of the Integration-Architect Materials and make sure that the quality of our questions and answers serve you the best. You are not required to pay any amount or getting registered with us for downloading free Integration-Architect materials. You can improve your confidence in the exam by learning about real exams through our free demo.

Free Integration-Architect Sample, Integration-Architect Latest Materials

It is inevitable that people would feel nervous when the Integration-Architect exam is approaching, but the main cause of the tension is most lies with lacking of self-confidence. Our Software version of Integration-Architect exam questions provided by us can help every candidate to get familiar with the Real Integration-Architect Exam, which is meaningful for you to take away the pressure and to build confidence in the approach. If you have had the confidence in yourself so that you have won the first step on the road to success.

Salesforce Integration-Architect certification is ideal for professionals who work in IT or consulting roles and are responsible for designing and implementing complex integration solutions. Salesforce Certified Integration Architect certification is also suitable for professionals who are looking to enhance their career prospects by gaining expertise in integrating Salesforce with other systems. The Integration-Architect certification is recognized as a mark of excellence in the Salesforce community and is highly valued by employers who are looking for professionals with advanced integration skills.

Salesforce is a leading CRM platform that is widely used by businesses of all sizes to manage their customer relationships. As companies increasingly rely on Salesforce to manage their sales, marketing, and customer service operations, the need for skilled professionals who can integrate Salesforce with other systems has grown significantly. The Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is designed to validate the skills and knowledge of professionals who specialize in integrating Salesforce with other systems.

Salesforce Certified Integration Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which WSDL should an architect consider when creating an integration that might be used for more than one Salesforce organization and different metadata?

- A. Corporate WSDL
- B. SOAP API WSDL
- C. Enterprise WSDL
- D. Partner WSDL

Answer: D

Explanation:

Explanation

The Partner WSDL is the best option for creating an integration that might be used for more than one Salesforce organization and different metadata. The Partner WSDL is loosely typed and can reflect against any configuration of Salesforce. It is static and does not change if modifications are made to an organization's Salesforce configuration. Therefore, it is more flexible and adaptable than the Enterprise WSDL, which is strongly typed and bound to a specific configuration of Salesforce. References: Differences between Salesforce provided WSDL files

NEW QUESTION # 61

Northern Trail Outfitters (NTO) has recently changed their Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

What are two considerations an Integration Architect should evaluate before choosing a middleware solution?

Choose 2 answers

- A. The middleware solution is capable of establishing a secure API gateway between cloud applications and on-premise resources.
- B. An API gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.
- C. The middleware solution is able to interface directly with databases via an ODBC connection string.
- D. The middleware solution enforces the OAuth security protocol.

Answer: A,B

Explanation:

An API gateway is a component that acts as a single point of entry for all cloud applications to access on-premise resources and services. It can provide security, routing, transformation, and other features to facilitate integration. An API gateway component should be deployable behind a DMZ or perimeter network, which is a subnetwork that separates the internal network from the external network and provides an additional layer of security. The middleware solution should also be capable of establishing a secure API gateway between cloud applications and on-premise resources, which may involve using protocols such as HTTPS, SSL/TLS, or VPN. The OAuth security protocol is not a requirement for choosing a middleware solution, as it is a standard for authorizing access to resources on behalf of a user. The middleware solution's ability to interface directly with databases via an ODBC connection string is also not a requirement, as it is a specific feature that may or may not be needed depending on the integration scenario. Reference: Salesforce Integration Architecture Designer Resource Guide, page 14-15

NEW QUESTION # 62

The sales Operations team at Northern Trail Outfitters imports new leads each day. An integrated legacy territory management system assigns territories to leads before Sales team members can work on them. The current integration often experiences latency issues.

Which two recommendations should an Architect make to improve the integration performance?

Choose 2 answers

- A. Legacy system should submit in parallel mode.
- B. Legacy system should submit in serial mode.
- C. Reduce batch size of synchronous BULK API.
- D. Reduce batch size of asynchronous BULK API.

Answer: A,D

Explanation:

Reducing the batch size of asynchronous BULK API and submitting the legacy system in parallel mode are two recommendations that can improve the integration performance. The BULK API is designed to handle large-scale data loads, but it can also cause latency issues if the batch size is too large or the network bandwidth is insufficient. Reducing the batch size can help to avoid timeouts and improve throughput.

Submitting the legacy system in parallel mode can also speed up the integration process by allowing multiple batches to be processed concurrently, as long as there are no dependencies or conflicts between them.

Reference: Salesforce Integration Architecture Designer Resource Guide, page 21

NEW QUESTION # 63

A customer imports data from an external system into Salesforce using Bulk API. These jobs have batch sizes of 2000 and are run in parallel mode. The batch fails frequently with the error "Max CPU time exceeded". A smaller batch size will fix this error.

Which two options should be considered when using a smaller batch size?

Choose 2 answers

- A. Smaller batch size may exceed the concurrent API request limits.
- B. Smaller batch size may increase time required to execute bulk jobs.
- C. Smaller batch size can trigger "Too many concurrent batches" error.
- D. Smaller batch size may cause record-locking errors.

Answer: B,D

Explanation:

Explanation

The error "Max CPU time exceeded" occurs when a batch of records takes more than 10 minutes to process in the Bulk API. Using a smaller batch size can reduce the processing time and avoid this error. However, there are some trade-offs to consider when using a smaller batch size, such as:

Answer A is valid because a smaller batch size may cause record-locking errors if multiple batches try to update the same records or records that are related by a lookup or master-detail relationship. This can result in concurrency issues and data inconsistency¹

Answer B is valid because a smaller batch size may increase the time required to execute bulk jobs, as more batches need to be created and processed sequentially. This can affect the performance and efficiency of the integration¹

Answer C is not valid because a smaller batch size may not exceed the concurrent API request limits, as the Bulk API does not count against the concurrent request limit. The Bulk API has its own limit on the number of batches that can be queued or in progress, which is 5,000 per rolling

24-hour period² Answer D is not valid because a smaller batch size can trigger "Too many concurrent batches" error only if the number of batches exceeds the limit of 5,000 per rolling 24-hour period. This error is not related to the parallel mode of the Bulk API, which allows up to 10 batches to be processed simultaneously

NEW QUESTION # 64

An Architect is asked to build a solution that allows a service to access Salesforce through the API. What is the first thing the Architect should do?

- A. Create a special user solely for the integration purposes.
- B. Create a new user with SystemAdministrator profile.
- C. Authenticate the integration using existing Network-Based Security.
- D. Authenticate the integration using existing Single Sign-On.

Answer: A

Explanation:

Create a special user solely for the integration purposes. This is the first thing that the Architect should do when building a solution that allows a service to access Salesforce through the API. Creating a special user for the integration purposes can help to ensure security, accountability, and traceability of the API calls. The special user should have a unique username, password, security token, and profile that grants only the necessary permissions and access for the integration. The special user should also be assigned to an API-only user license type that prevents logging in to the Salesforce UI.
