We can relieve you of uptight mood and serve as a considerate and responsible company with excellent IIBA-AAC Exam Questions which never shirks responsibility. It is easy to get advancement by our IIBA-AAC study materials. On the cutting edge of this line for over ten years, we are trustworthy company you can really count on.

IIBA Agile Analysis Certification Sample Questions (Q31-Q36):

NEW QUESTION # 31

Good analysis practices at the Strategy Horizon facilitate the transfer of relevant knowledge between teams to:

- A. Cancel initiatives that no longer provide value
- B. Prioritize and sequence features for delivery
- C. Stimulate collaboration and continuous improvement.

- D. Better understand what features will be delivered

Answer: C

NEW QUESTION # 32

The team is assessing feedback from the work that's been completed. After some discussion they realize this feedback can be used to assess the remaining components that are yet to be built. Specifically, this feedback can be used to help them determine if the initiative's remaining solution components are:

- A. Supported by management
- B. Likely to be completed
- **C. Still appropriate**
- D. Impacting other initiatives

Answer: C

NEW QUESTION # 33

The following can be described as a critical differentiator for work in an agile context related to backlog refinement:

- **A. Stakeholder feedback**
- B. Using user stories
- C. Team feedback
- D. Management approval

Answer: A

Explanation:

NEW QUESTION # 34

Members of the delivery team are discussing information depicted as entities with attributes and the relationships that exist between those entities. They are using the following technique:

- A. Organization modelling
- **B. Data modelling**
- C. Process modelling
- D. Scope modelling

Answer: B

Explanation:

===== The team is utilizing Data Modelling to provide a visual representation of the information requirements within the solution. This technique involves identifying specific entities, their relevant attributes, and the logical relationships that exist between them. In an agile context, data modelling helps the team understand the structure of the data they are manipulating, ensuring that the solution can effectively support the business rules and user needs. While agile teams avoid overly complex, upfront data schemas, creating lightweight data models during delivery helps clarify requirements and ensures technical consistency. This shared understanding of data structures prevents defects related to data handling and ensures that the solution's information architecture is robust enough to provide the intended value to stakeholders.

NEW QUESTION # 35

During a planning workshop, the team is discussing: "What outcomes are we driving now?" This team is operating at the:

- A. Goals horizon
- **B. Initiative horizon**
- C. Testing phase
- D. Retrospective event
