At the same time, it is difficult to follow and trace the changes of the PDI Exam, but our professional experts are good at this for you. Just buy our PDI study materials, you will succeed easily!

Salesforce Platform Developer I (PDI) Sample Questions (Q162-Q167):

NEW QUESTION # 162

Provide question feedback here (optional):

Based on this code, what is the value of x?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The variable `isOK` is declared but not initialized, so its value is `null`. The `if-else` conditions check for specific values of `isOK` (`true` or `false`), but since it is `null`, none of those conditions are satisfied. The program defaults to the `else` block, assigning `4` to `x`.

NEW QUESTION # 163

A developer needs to implement a custom SOAP Web Service that is used by an external Web Application. The developer chooses to include helper methods that are not used by the Web Application in the implementation of the Web Service Class.

Which code segment shows the correct declaration of the class and methods?

- A)
- ☐ B)
- ☐ C)
- ☐ D)

- A. Option B
- B. Option A
- **C. Option C**
- D. Option D

Answer: C

NEW QUESTION # 164

How should a developer write unit tests for a private method in an Apex class?

- A. Use the `SeeAllData` annotation.
- **B. Use the `@TestVisible` annotation.**
- C. Mark the Apex class as global.
- D. Add a test method in the Apex class.

Answer: B

Explanation:

The `@TestVisible` annotation allows private methods or variables to be accessed in test classes. This ensures that the private method can be adequately tested without changing its access modifier.

NEW QUESTION # 165

A developer created a trigger on a custom object. This custom object also has some dependent pick lists.

According to the order of execution rules, which step happens first?

- A. JavaScript validation is run in the browser,
- B. Old values are overwritten with the new record values.
- C. System validation is run for maximum field lengths.
- **D. The original record is loaded from the database.**

Answer: D

NEW QUESTION # 166

How is a controller and extension specified for a custom object named "Notice" on a Visualforce page?

- **A. `apex:page standardController="Notice__c" extensions="myControllerExtension"`**
- B. `apex:page controller="Notice__c" extensions="myControllerExtension"`
- C. `apex:page controllers="Notice__c, myControllerExtension"`
- D. `apex:page=Notice extends="myControllerExtension"`

Answer: A

Explanation:

When creating a Visualforce page that uses a standard controller and a controller extension for a custom object named Notice__c, the correct syntax is:

<apex:page standardController="Notice__c" extensions="myControllerExtension"> Option D: apex

standardController="Notice_c" extensions="myControllerExtension" Correct Syntax.

standardController attribute specifies the standard controller for the custom object Notice c.

extensions attribute specifies the name of the Apex class myControllerExtension that extends the functionality of the standard controller.

Reference:

Options Not Applicable:

Option A: apex

```
controller="Notice__c" extensions="myControllerExtension"
```

Incorrect.

The controller attribute is used for custom controllers, not standard controllers.

Option B and C:

Syntax errors and incorrect attributes make these options invalid.

Conclusion:

The correct way to specify a controller and extension for the Notice c object is Option D.

NEW QUESTION # 167
