最新版的101-500最新題庫，覆蓋全真LPIC-1 Exam 101, Part 1 of 2, version 5.0 101-500考試考題

最熱門的101-500認證考試是能夠改變您生活的IT認證考試，獲得Lpi 101-500證書的IT專業人員的薪水要比沒有獲得證書的員工高出很多倍，他們的上升空間也很大，能帶來更好的工作機會。不要因為準備Lpi 101-500而浪費過多時間，可以使用Testpdf網站提供的考古題資料，幫助您更有效率的準備101-500考試。這是一個人可以讓您輕鬆通過101-500考試的難得的學習資料，錯過這個機會您將會後悔。

最新的 LPIC Level1 101-500 免費考試真題 (Q262-Q267):

問題 #262

Which command must be entered before exiting vi to save the current file as filea.txt?

- A. :s filea.txt
 - B. %s filea.txt
 - C. :w filea.txt
 - D. %w filea.txt
- c:save filea.txt

答案： C

問題 #263

Which of the following apt-get commands will install the newest versions of all currently installed packages?

- A. update
- B. auto-update
- C. install
- D. dist-upgrade
- E. full-upgrade

答案： E

解題說明：

Explanation

The apt-get command is used to interact with the APT package management system on Debian-based Linux distributions. The apt-get command has several subcommands that perform different operations on packages.

One of these subcommands is full-upgrade, which is used to install the newest versions of all currently installed packages, along with their dependencies. The full-upgrade command also removes any packages that are no longer needed or that conflict with the upgraded packages. The full-upgrade command is equivalent to the dist-upgrade command, which is an older name for the same operation. The other options are not valid subcommands of apt-get. The auto-update option does not exist, the install option is used to install specific packages, not to upgrade them, the update option is used to update the list of available packages, not to install them, and the dist-upgrade option is the same as the full-upgrade option. 問題 #264

SIMULATION

Which command reads and displays the current contents of the Kernel Ring Buffer on the command line? (Specify ONLY the command without any path or parameters.)

答案：

解題說明：

dmesg

問題 #265

Which chown command will change the ownership to dave and the group to staff on a file named data.txt?

- A. chown -u dave -g staff data.txt
- B. chown dave:staff data.txt
- C. chown dave/staff data.txt
- D. chown --user dave --group staff data.txt

答案： B

解題說明：

The chown command is used to change the owner and group of files and directories in Linux. The basic syntax of the chown command is:

```
chown [options] user[:group] file...
```

The user is the name or the numeric ID of the new owner of the file. The group is the name or the numeric ID of the new group of the file. The file is the name or the path of the file or directory to be changed. The user and group are separated by a colon (:), not a slash (/). The group is optional, and if it is omitted, the group will not be changed. The options are optional, and they can modify the behavior of the chown command, such as changing the ownership recursively, silently, or verbosely.

In this question, the user is dave and the group is staff. The file is data.txt. Therefore, the correct command to change the ownership to dave and the group to staff on data.txt is:

```
chown dave:staff data.txt
```

This command will change the owner of data.txt to dave and the group of data.txt to staff. You can verify the changes by using the ls -l command to view the owner and group of data.txt.

The other options are not correct because:

* A. chown dave/staff data.txt: This command is not valid because it uses a slash (/) instead of a colon (:) to separate the user and group. The slash (/) is used to separate the directories in a path, not the user and group in the chown command. If you run this command, you will get an error message saying:

```
chown: invalid user: 'dave/staff'
```

* B. chown -u dave -g staff data.txt: This command is not valid because it uses the -u and -g options, which do not exist in the chown command. The -u and -g options are used in the chgrp command, which is used to change only the group of files and directories, not the owner. The chown command does not have the -u and -g options, and it uses the user[:group] argument to specify the new owner and group. If you run this command, you will get an error message saying:

```
chown: invalid option - 'u' Try 'chown --help' for more information.
```

* C. chown --user dave --group staff data.txt: This command is not valid because it uses the --user and --group options, which do not exist in the chown command. The --user and --group options are used in the usermod command, which is used to modify the user account information, not the file ownership.

The chown command does not have the --user and --group options, and it uses the user[:group] argument to specify the new owner and group. If you run this command, you will get an error message saying:

```
chown: unrecognized option '-user' Try 'chown --help' for more information.
```

問題 #266

Which command displays a list of all background tasks running in the current shell? (Specify ONLY the command without any path or parameters.)

答案:

解題說明:

jobs

Explanation

The jobs command displays a list of all background tasks running in the current shell. A background task is a process that is started with the & operator or suspended with Ctrl+Z and resumed with the bg command. The jobs command shows the job number, the status, and the command name of each background task. For example, the following output shows two background tasks: one is running (sleep 10) and one is stopped (ping www.howtogeek.com).

```
1- Running sleep 10 & 2+ Stopped ping www.howtogeek.com
```
