Valid ISTQB - ISTQB-CTFL - ISTQB Certified Tester Foundation Level (CTFL v4.0) Pass Leader Dumps

ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL study guide are high quality, since we have a professional team to collect the information for the exam, and we can ensure you that ISTQB-CTFL study guide you receive are the latest information we have. In order to strengthen your confidence for ISTQB ISTQB-CTFL Exam Dumps, we are pass guarantee and money back guarantee.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q121-Q126):

NEW QUESTION # 121

The following rules determine the annual bonus to be paid to a salesman of a company based on the total annual amount of the sales made (referred to as TAS).

If the TAS is between 50k€ and 80k€, the bonus is 10%. If the TAS exceeds 80k€ by a value not greater than 40k€, the bonus is 15%. Finally, if the TAS exceeds the maximum threshold which entitles to a 15% bonus, the bonus is 22%.

Consider applying equivalence partitioning to the TAS (Note: 1k€ = 1000 euros).

Which one of the following answers contain only test cases that belong to the same equivalence partition?

- A. TC1 = 79k€; TC2= 80k€; TC3=81k€; TC4=82k€
- B. TC1 = 40k€; TC2= 46k€; TC3=51k€; TC4=53k€
- **C. TC1 = 81 k€; TC2= 97k€; TC3=111k€; TC4=118k€**
- D. TC1 = 90k€; TC2= 110k€; TC3=125k€; TC4=140k€

Answer: C

Explanation:

This answer is correct because equivalence partitioning is a test design technique that divides the input domain of a system or component into partitions of equivalent data, such that each partition is expected to produce the same output or behavior.

Equivalence partitioning aims to reduce the number of test cases by selecting one representative value from each partition. In this case, the input domain of the TAS can be divided into four partitions based on the bonus rules: less than 50k€, between 50k€ and 80k€, between 80k€ and 120k€, and more than 120k€. The test cases in the answer belong to the same partition, which is between 80k€ and 120k€, and they are expected to produce the same output, which is a bonus of 15%. NEW QUESTION # 122

Which of the following options cover the test types performed during typical system testing phase:

I Usability

II Requirements based scenarios

III Testing parts of the code in isolation

IV Correct order of parameters in API calls

- A. III, IV
- B. II, IV
- **C. I, II**
- D. I, III

Answer: C

Explanation:

System testing is a level of testing performed to evaluate the behavior and quality of a whole software product or system. System testing can include various types of testing, such as:

I) Usability testing: A type of testing that evaluates how easy, efficient and satisfying it is to use the software product or system from the user's perspective.

II) Requirements based scenarios testing: A type of testing that verifies that the software product or system meets its specified requirements or user stories by executing realistic scenarios or workflows. System testing does not include the following types of testing, as they are more suitable for lower levels of testing, such as unit testing or integration testing:

III) Testing parts of the code in isolation: A type of testing that verifies the functionality and quality of individual software components or units by isolating them from other components or units.

IV) Correct order of parameters in API calls: A type of testing that verifies the functionality and quality of software components or units that communicate with each other through application programming interfaces (APIs) by checking the correct order and format of parameters in API calls. Verified Reference: [A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer], Chapter 2, page 20-21; Chapter 4, page 34-35.

NEW QUESTION # 123

How can testing contribute to higher quality?

- A. Testing removes errors in the software.
- B. Testing ensures that remaining defects are documented.
- **C. Testing help to measure the quality of software.**
- D. Testing eliminates the risk with software.

Answer: C

Explanation:

Testing can contribute to higher quality by helping to measure the quality of software. Quality is defined as the degree to which a component or system satisfies specified requirements and customer or user needs and expectations. Testing is a process of evaluating a component or system by applying inputs and observing outputs, and comparing them with expected results. Testing can help to measure the quality of software by providing information on its functionality, performance, usability, security, reliability, etc. Testing can also help to identify and report defects in software, which can lead to improvement actions and quality assurance activities. The other options are not accurate descriptions of how testing can contribute to higher quality.

Testing does not ensure that remaining defects are documented, but rather that detected defects are reported.

Testing does not remove errors in software, but rather finds defects in software behavior or quality. Testing does not eliminate the risk with software, but rather assesses and manages the risk with software. Verified References: A Study Guide to the ISTQB® Foundation Level 2018 Syllabus - Springer, page 3.

NEW QUESTION # 124

Which of the following statements about Experience Based Techniques (EBT) is correct?

- A. EBT require broad and deep knowledge in testing but not necessarily in the application or technological domain.
- **B. EBT use tests derived from the test engineers' previous experience with similar technologies.**
- C. EBT is done as a second stage of testing, after non-experienced-based testing took place.
- D. EBT is based on the ability of the test engineer to implement various testing techniques.

Answer: B

Explanation:

Experience based techniques (EBT) are techniques that use the knowledge, intuition and skills of the test engineers to design and execute tests. EBT use tests derived from the test engineers' previous experience with similar technologies, domains, applications or systems. EBT are not based on the ability of the test engineer to implement various testing techniques, but rather on their personal judgment and creativity. EBT are not done as a second stage of testing, after non-experience-based testing took place, but rather as a complementary or alternative approach to other techniques. EBT require broad and deep knowledge in both testing and the application or technological domain, as this can help the test engineer identify potential risks, scenarios or defects. Verified References: [A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer], Chapter 5, page 48-49.

NEW QUESTION # 125

Given the following state model of sales order software:

- * PLACED -> IN PRODUCTION
- * IN PRODUCTION -> CANCELLED
- * IN PRODUCTION -> SHIPPED
- * SHIPPED -> INVOICED
- * INVOICED -> CANCELLED
- * CANCELLED -> PLACED

Which of the following sequences of transitions provides the highest level of transition coverage for the model (assuming you can start in any state)?

- A. PLACED -> CANCELLED -> PLACED -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED
- B. IN PRODUCTION -> CANCELLED -> PLACED -> IN PRODUCTION -> CANCELLED -> PLACED
- **C. IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION**
- D. PLACED -> IN PRODUCTION -> SHIPPED -> CANCELLED -> PLACED

Answer: C

Explanation:

To achieve the highest level of transition coverage, one must consider all the possible transitions between the states in the given state model of the sales order software. The transitions in the sequence provided in Option B - "IN PRODUCTION -> SHIPPED -> INVOICED -> CANCELLED -> PLACED -> IN PRODUCTION" cover all the states and transitions effectively. This covers the transitions from IN PRODUCTION to SHIPPED, SHIPPED to INVOICED, INVOICED to CANCELLED, CANCELLED to PLACED, and PLACED to IN PRODUCTION, thereby maximizing the transition coverage.
