Pass Guaranteed 2026 Trustable Snowflake DAA-C01: Authorized SnowPro Advanced: Data Analyst Certification Exam Certification

Therefore, if you have struggled for months to pass SnowPro Advanced: Data Analyst Certification Exam DAA-C01 exam, be rest assured you will pass this time with the help of our SnowPro Advanced: Data Analyst Certification Exam DAA-C01 exam dumps. Every SnowPro Advanced: Data Analyst Certification Exam DAA-C01 candidate who has used our exam preparation material has passed the exam with flying colors. Availability in different formats is one of the advantages valued by SnowPro Advanced: Data Analyst Certification Exam exam candidates. It allows them to choose the format of SnowPro Advanced: Data Analyst Certification Exam DAA-C01 Dumps they want.

After your payment is successful, you will receive an e-mail from our system within 5-10 minutes, and then, you can use high-quality DAA-C01 exam guide to learn immediately. Everyone knows that time is very important and hopes to learn efficiently to pass the DAA-C01 exam. Once they discover DAA-C01 practice materials, they will definitely want to seize the time to learn. So after payment, downloading into the exam database is the advantage of our products. The sooner you download and use DAA-C01 guide torrent, the sooner you get the DAA-C01 certificate.

Authorized DAA-C01 Certification & ValidVCE - Leader in Certification Exam Materials & Snowflake SnowPro Advanced: Data Analyst Certification Exam

One of the most important functions of our APP online vesion which is contained in our DAA-C01 preparation questions are that can support almost all electronic equipment, including the computer, mobile phone and so on. If you want to prepare for your exam by the computer, you can buy our DAA-C01 training quiz, because our products can work well by the computer. Of course, if you prefer to study by your mobile phone, our DAA-C01 study materials also can meet your demand.

Snowflake SnowPro Advanced: Data Analyst Certification Exam Sample Questions (Q122-Q127):

NEW QUESTION # 122
In Snowflake, how does leveraging Time Travel contribute to handling data anomalies and ensuring data integrity?

- A. Provides real-time data updates
- B. Validates data types for consistency
- C. Enables querying data as of specific timestamps
- D. Restricts data access for specific user roles

Answer: C

Explanation:
Time Travel in Snowflake allows querying data as of specific timestamps, aiding in addressing data anomalies and ensuring data integrity by accessing historical data versions.

NEW QUESTION # 123
You have a table named 'ORDERS with a 'ORDER DATE column stored as VARCHAR. The column contains dates in the format 'YYYY-MM-DD HH24:Ml:SS.FF3'. You need to calculate the number of orders placed in January 2023. Which of the following SQL statements will achieve this most efficiently and accurately, considering potential time zone differences configured at the user or account level?

- A. ☐
- B. ☐
- C. ☐
- D. ☐
- E. ☐

Answer: A

Explanation:
Option E is the most robust because it explicitly handles the VARCHAR to TIMESTAMP conversion, incorporates timezone conversion from UTC to the session's timezone, and then extracts the DATE part for accurate filtering. This accounts for potential timezone discrepancies that might affect date boundaries. Options A and B rely on string manipulation, which is prone to errors and not recommended for date operations. Option C lacks time zone considerations, which can lead to issues. Option D is less efficient because MONTH() and YEAR() function needs to be applied, and it also lacks timezone conversion consideration.

NEW QUESTION # 124
You have a Snowflake table 'EMPLOYEES' with columns 'EMPLOYEE ID' ONT, PRIMARY KEY), 'SALARY' and 'DEPARTMENT' (VARCHAR). You need to enforce the following business rules: 1. 'SALARY' must be a positive value. 2. 'DEPARTMENT' must be one of the following values: 'SALES', 'MARKETING', 'ENGINEERING'. 3. If the Employee is in 'SALES' Department, Salary should be between 50000 and 100000. Which of the following is the most appropriate and efficient approach using Snowflake constraints and features?

- A. Use CHECK constraint for SALARY, Create a Lookup table for Departments, and apply a Foreign key relationship for DEPARTMENT field in EMPLOYEE table.
- B. Use a CHECK constraint for 'SALARY > , an ENUM type for 'DEPARTMENT' , and a TRIGGER to enforce the salary range rule for the 'SALES' department.
- C. Use CHECK constraints for both rules and a third CHECK constraint to combine rules 2 and 3 to apply on each record.
- D. Use a CHECK constraint for 'SALARY > , a CHECK constraint 'DEPARTMENT IN ('SALES', 'MARKETING', 'ENGINEERING') , and a third CHECK constraint 'CASE WHEN DEPARTMENT = 'SALES' THEN SALARY BETWEEN 50000 AND 100000 ELSE TRUE END'.
- E. Enforce rules using stored procedure at the time of insertion and updation.

Answer: D

Explanation:
Option D is the most appropriate and efficient. CHECK constraints are designed for these types of validations. The 'CASE' statement within the third CHECK constraint allows conditional validation based on the 'DEPARTMENT value. CHECK constriants are enforced at the time of record insert or update. Stored procedures could be an option but are not the most appropriate. Snowflake does not directly support ENUM types for column definitions. Creating Lookup table with Foreign key is another option.

NEW QUESTION # 125
You need to create an exact, point-in-time copy of a production database named 'CUSTOMER DATA for testing purposes, without impacting the performance of the production system. You want to ensure that the test database 'CUSTOMER DATA TEST uses minimal storage. Which of the following Snowflake commands provides the MOST efficient way to achieve this?

- A. ☐
- B. ☐
- C. ☐
- D. ☐
- E. ☐

Answer: A

Explanation:
The 'CREATE DATABASE CUSTOMER DATA TEST CLONE CUSTOMER DATA;' command is the MOST efficient because it leverages Snowflake's zero-copy cloning feature. Cloning creates a metadata copy of the database; data is only physically copied when changes are made to the clone. This minimizes storage usage and has a minimal performance impact on the production database. Option A is used for replication across accounts/regions. Option B is not a valid Snowflake command. Option D only copies the structure, and not the data. Option E copies the data into a table within a new or existing database, not cloning the entire database structure.

NEW QUESTION # 126
A table named 'website_visits' tracks user activity with columns 'user_id', 'visit_timestamp' , and 'page_view'. You need to determine the time difference (in minutes) between each user's consecutive page views. Assuming 'visit_timestamp' is of data type TIMESTAMP NTZ, which Snowflake SQL query will accurately calculate this?
☐

- A. Option A
- B. Option E
- C. Option D
- D. Option B
- E. Option C

Answer: D

Explanation:
Option B is correct. start_time, end_timey calculates the difference in minutes between two timestamps. 1, visit_timestamp) OVER (PARTITION BY user_id ORDER BY visit_timestampy retrieves the previous timestamp for each user. The default value is crucial to handle the first visit for each user. Option A is incorrect because subtracting timestamps directly results in a value in days, not minutes. Option C is incorrect because 'TIMEDIFF does not exist in Snowflake. Option D uses 'TIMESTAMPDIFF but it does not accept the time unit as the first parameter. Option E uses AVG aggregation which is not the purpose of the window functions in this

scenario.
