## **Free PDF Quiz 2026 Tableau TDA-C01: Tableau Certified Data Analyst Accurate Exam Blueprint**

Thanks to our diligent experts, wonderful study tools are invented for you to pass the TDA-C01 exam. You can try the demos of our TDA-C01 exam questions first and find that you just can't stop studying. There are three kinds of the free demos according to the three versions of the TDA-C01 learning guide. Using our TDA-C01 study materials, you will just want to challenge yourself and get to know more.

The Tableau Certified Data Analyst certification exam consists of multiple-choice questions, and candidates are provided with a time limit of two hours to complete the exam. TDA-C01 exam questions are designed to test the candidate's knowledge of Tableau products, such as Tableau Desktop, Tableau Prep Builder, and Tableau Server. TDA-C01 Exam also covers topics such as data connections, data blending, calculations, and data storytelling.

## Tableau Certified Data Analyst Sample Questions (Q177-Q182):

### NEW QUESTION # 177

You want to add a comment to March 2020 as shown in the following visualization.

You have the following sets in a Tableau workbook

- \* Top N Customers
- \* Customers of 2020
- \* Top N Products
- \* Sellers of 2020

Which two sets can you combine? Choose two

- A. Customers of 2020
- B. Top N Customers
- C. Top N Products
- D. Sellers of 2020

**Answer: A,B**

Explanation:

To combine two sets, they must have at least one dimension in common. In this case, Customers of 2020 and Top N Customers both have Customer Name as a dimension, so they can be combined using set operations such as union, intersection, or difference. Sellers of 2020 and Top N Products have different dimensions (Seller Name and Product Name), so they cannot be combined.

References: <https://help.tableau.com/current>

[/pro/desktop/en-us/sets.htm](https://help.tableau.com/current/pro/desktop/en-us/sets.htm) [https://help.tableau.com/current/pro/desktop/en-us/sets\\_create.htm#combine-sets](https://help.tableau.com/current/pro/desktop/en-us/sets_create.htm#combine-sets) In Tableau, sets can be combined if they are created from the same dimension. From the options provided, "Customers of 2020" and "Top N Customers" are likely created from the same dimension (Customers).

Therefore, these two sets can be combined to create a new set that includes or excludes members based on the combined criteria. Combining sets like "Top N Products" with "Customers of 2020" would not be feasible unless they are from the same dimension, which is typically not the case.

### NEW QUESTION # 178

Open the link to Book1 found on the desktop. Open the Histogram worksheet and use the Superstone data source.

Create a histogram on the Quantity field by using bin size of 3.

**Answer:**

Explanation:

check the steps below in explanation

Explanation:

To create a histogram on the Quantity field by using bin size of 3, you need to do the following steps:

Open the link to Book1 found on the desktop. This will open the Tableau workbook that uses the Superstore data source.

Click on the Histogram tab at the bottom of the workbook to open the Histogram worksheet. You will see a blank worksheet with no marks.

Right-click on Quantity in the Measures pane and select Create Bins from the menu. This will open a dialog box that allows you to create bins for the Quantity field. Bins are groups of values that are treated as one unit in a histogram.

Enter 3 in the Size of bins text box. This will set the bin size to 3, which means that each bin will contain values that are 3 units apart. For example, one bin will contain values from 0 to 2, another bin will contain values from 3 to 5, and so on.

Click OK to create the bins. You will see a new field named Quantity (bin) in the Measures pane with a # sign next to it.

Drag Quantity (bin) from the Measures pane to Columns on the worksheet. This will create a histogram that shows the distribution of Quantity by bins. You will see bars that represent the frequency or count of values in each bin.

Optionally, you can adjust the width, color, and labels of the bars by using the options on the Marks card. You can also add filters, tooltips, or annotations to enhance your histogram.

### NEW QUESTION # 179

In a dataset, you have a string field named Name that contains unnecessary semicolons.

Which function should you use to remove the semicolons from the Name field?

- A. CONTAINS

- B. SPLIT
- C. TRIM
- D. REPLACE

**Answer: A**

Explanation:

The REPLACE function is used to replace all occurrences of a substring within a string with another substring. In this case, it can be used to remove the semicolons from the Name field by replacing them with an empty string. For example, REPLACE ("John;Doe", ";", "") = "JohnDoe". References: The information is based on the following sources:

- \* String Functions - Tableau
- \* Remove special characters and add a semi colon in a word - Tableau

### NEW QUESTION # 180

You have a dataset that contains daily sales by business segment from 2017 to the present. You want to use monthly historical trends to predict sales by segment in the future. Which three actions should you perform in order?

(Place the three correct options in order. Use the arrows to move Options to Answer Area 1. In Answer Area arrows to re order the options.)

**Answer:**

Explanation:

- 1 - Aggregate the date to month and year
- 2 - Create a calculated field that uses the MODEL\_QUANTILE function.
- 3 - Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.

### NEW QUESTION # 181

You connect to a database server by using Tableau Prep. The database server has a data role named Role1.

You have the following field in the data.

You need to apply the Role1 data role to the Material field.

Which two actions should you perform? Choose two.

- A. For the data type of the Material field, select Custom, and then select Role1.
- B. From the More actions menu of Materials, select Valid in the Show values section.
- C. From the More actions menu of Materials, filter the selected values.
- D. From the More actions menu of Materials, select Group Values, and then select Spelling.

**Answer: A,D**

Explanation:

To apply a custom data role to a field, you need to select the data type of the field and then choose the data role from the list of available roles. This will validate the values in the field against the data role and mark any invalid values with a red exclamation mark. To fix the invalid values, you can use the Group Values option and select the Spelling algorithm, which will group values that are close in spelling and replace them with the most frequent value in the group. This will help you standardize the values in the Material field and match them with the Role1 data role. References: The information is based on the following sources:

- \* Use Data Roles to Validate your Data - Tableau
- \* New in Tableau Prep: Automatically identify data quality issues with Data Roles
