最新的 VMCE VMCE_v12 免費考試真題 (Q187-Q192):

問題 #187

An administrator needs to schedule a SureBackup job to scan backups for malware to satisfy company security requirements. The job does not need to test the functionality of the workloads in the backup and needs to take the least amount of time possible. Which option should the administrator select?

- A. Full recoverability testing
- B. Backup integrity scanning
- C. Staged restore with YARA content scanning
- **D. Backup verification and content scan only**

答案: D

解題說明:

To meet the requirement of scanning backups for malware without testing the functionality of the workloads and minimizing the time required, the administrator should select "Backup verification and content scan only." This option focuses specifically on verifying the integrity of the backup data and performing malware scans without conducting full recoverability testing or staged restores, thereby satisfying security requirements efficiently.

問題 #188

A Veeam administrator is restoring a user object from Active Directory using the Veeam Explorer for Microsoft Active Directory. They want to restore the user object including the password. What options exist for restoring the object with a password? (Choose 2)

- A. Restore the user object to the source domain
- B. Send password to user account via email
- C. Allow user to set password
- D. Show password
- E. Use "Restore objects to" and choose the "Restore password" option

答案: E

問題 #189

Which Veeam Backup & Replication job type offers the shortest recovery time objective (RTO)?

- A. Backup copy
- B. Replication
- C. Backup to tape
- D. File to tape

答案: B

解題說明:

問題 #190

A physical Linux server protected by a centrally managed Veeam agent is physically damaged. A VMware vSphere infrastructure is available, and the physical server is eligible for virtualization. Which recovery step provides the lowest possible RTO?

- A. Use Instant VM Recovery to VMware
- B. Use Export Disk Content as Virtual Disk to create a new VM.
- C. Use Bare Metal Restore to VMware vSphere VM.
- D. Use Instant Disk Recovery to VMware vSphere.

答案: A

解題說明:

Instant VM Recovery to VMware offers the lowest possible RTO for restoring a physically damaged Linux server to a VMware vSphere infrastructure. This feature rapidly restores service by running the server directly from the backup file in a VMware environment. References: Veeam Backup & Replication User Guide, Veeam Agent for Linux Guide

問題 #191

A business has the following new regulatory requirements to follow:

- Follow the 3-2-1 rule.
 - Prevent the most recent 31 days of any backup files from being deleted or modified
 - Keep one copy of a monthly restore point around for two years
- They have the following setup:
- A standalone repository on a NAS
 - A backup job keeping 31 days of restore points
 - A backup copy job to an Amazon Simple Storage Service Repository, keeping 31 days of backups and 24 monthly GFS restore points

Which two actions should the engineer take to change the environment to meet the new requirements? (Choose two.)

- A. Enable immutability in Amazon S3
- B. Move the backups from the NAS to a hardened repository
- C. Enable Immutability on the NAS

- D. Add 24 monthly GFS restore points to the backup job
- E. Configure a Scale-Out Backup Repository with NAS and Windows hardened repository

答案: A,B

解題說明:

Based on the new requirements, the two most appropriate changes are:

Move the backups from the NAS to a hardened repository (option D)

To meet the requirement of preventing modifications or deletions for the most recent 31 days, you need an immutable (WORM) storage target. A standard NAS typically doesn't provide immutability, so moving to a hardened (Linux) repository enables that 31-day lock on local backups.

Enable immutability in Amazon S3 (option E)

For the offsite (copy) backups, you also need to protect them from deletions or modifications for the same 31-day window. By configuring Object Lock (immutability) on the S3 bucket, you ensure the copy is similarly protected.
