EMC D-PVM-OE-01 시험요강:

주제	소개
주제 1	• Unisphere for PowerMax 10 Implementation and Administration: This section of the exam measures the skills of System Administrators and covers the implementation and management of Unisphere for PowerMax. Candidates must understand the installation process, post-installation tasks, and interface navigation to efficiently operate the platform. One key skill evaluated is setting up Unisphere for PowerMax.
주제 2	• PowerMax Family Management in a Virtual Environment: This section of the exam measures the skills of Virtualization Engineers and evaluates the integration of PowerMax storage in virtualized environments. Candidates must understand VMware vSphere, the functionalities of Virtual Storage Integrator (VSI), and how to monitor virtualized workloads using Unisphere for PowerMax. One critical skill assessed is tracking virtual machine storage performance.

주제 3	• PowerMax Family Monitoring and Workload Planning: This section of the exam measures the skills of Performance Analysts and focuses on monitoring storage environments and workload planning using Unisphere for PowerMax. Candidates must understand how to track performance metrics, detect issues, and optimize workloads to enhance storage efficiency. One key skill tested is monitoring storage health through Unisphere.
주제 4	• Solutions Enabler 10 Implementation: This section of the exam measures the skills of Infrastructure Engineers and focuses on the fundamentals of Solutions Enabler. Candidates must understand its installation, upgrade processes, gatekeeper management, and daemon functions across different platforms. One crucial skill tested is managing Solutions Enabler daemons.
주제 5	• PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.

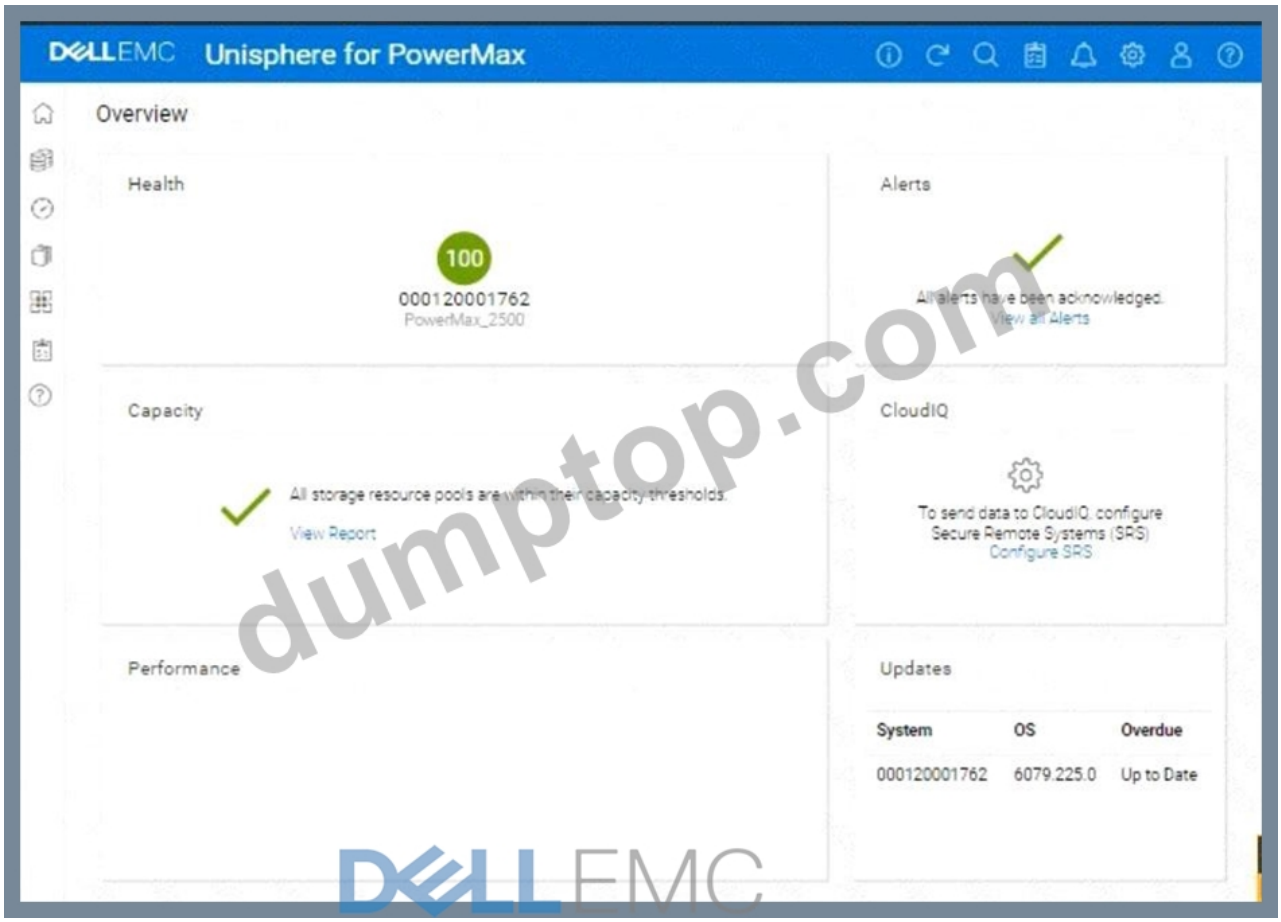
최신 Storage Administrator D-PVM-OE-01 무료샘플문제 (Q116-Q121):

질문 # 116
A systems administrator is performing a configuration change on a PowerMax array. Where does the configuration manager perform the change?

- A. Host which performs the change
- B. SYMAPI
- C. Disk drives
- D. MMCS

정답：D

질문 # 117
A company is setting up a multi-tenant environment where multiple departments share the same storage array with SID 1762. The IT department requires 2 TB of storage to be available on the ESXi1 host. Use
"ESXi1_SG" for the storage group name, create a port group with Dir- Ports "OR-1C:0 and OR-2C:0," and leave all other settings at their default.



Using the simulator, provision the storage required with a single volume using auto-provisioning groups.

정답：

설명：
See the explanation for step by step solution.
Explanation:
We need to provision 2 TB of storage to the ESXi1 host on a PowerMax array (SID 1762) using Unisphere, in a multi-tenant environment. We'll use auto-provisioning with the following specifics:
* Storage Group Name:ESXi1_SG
* Port Group:(A new port group with Directors OR-1C:0 and OR-2C:0)
* Volume Size:2 TB (single volume)
* Other Settings:Default
Here are the step-by-step instructions, tailored for the Unisphere simulator as described in the question:
Steps:
1. Launch the Simulator and Navigate to Storage Groups
* Open Unisphere for PowerMax in your web browser.
* You should already be logged in to the simulator, with the PowerMax array with SID 1762.
* In the left-hand navigation pane, click onStorage>Storage Groups.
2. Initiate Storage Group Creation
* Click theCreatebutton (likely a plus "+" icon) in the Storage Groups section to start the Create Storage Group wizard.
3. Name the Storage Group
* In the "Create Storage Group" wizard:
* Storage Group Name:Enter ESXi1_SG.
* Enable FAST/Service Level:Do not check this option, as we are leaving all other settings at their default.
* ClickNextorContinue(the exact wording might vary).
4. Add Volumes
* Ensure"Create new volumes"is selected.
* Number of Volumes:Enter 1.
* Volume Size:
* Enter 2.
* Select TB from the dropdown for the unit.
* ClickNext.

5. Create the Port Group
* You should now be on the "Connectivity" or "Host" step, where you will add a new port group.
* Select "Create Port Group"
* Port Group Name:Give the new port group a name. You can use something descriptive like "ESXi1_PG," or any name that follows your organization's naming conventions.
* Select Ports:
* Find and select the following Directors and ports from the list of available ports:
* OR-1C:0
* OR-2C:0
* Note:The simulator may not allow you to highlight the exact director ports as in a production environment. It will likely display all directors and ports under the selected array. Just ensure they are selected as part of the port group.
* ClickNext.
6. Add host to the Masking View
* Select "Add Host"
* Select "Create New Host"
* Host Name:ESXi1
* Initiators:You don't have specific initiators to add in this simulation, so you can skip this part or add any from the available options. This is because we are working within a simulated environment.
* ClickNext
7. Review and Create
* You'll be presented with a summary page that shows:
* Storage Group: ESXi1_SG
* Volume: 1 x 2 TB volume
* Port Group: (The new port group you created with OR-1C:0 and OR-2C:0)
* Host: ESXi1
* Carefully review all the settings to make sure they are correct.
* ClickRun NoworFinish(or similar wording) to create the storage group, volume, port group, and masking view.
8. Verification (Optional)
* After the operation completes, you can verify the results:
* Go back to theStorage Groupslist. You should see the ESXi1_SG storage group.
* Click on ESXi1_SG to view its details. You should see the 2 TB volume and the associated host (ESXi1) and port group.
* You can also navigate toHosts>Port Groupsto verify that the new port group was created correctly.
* Finally, you can navigate toHosts>Masking Viewsto verify that a masking view was created correctly.

질문 # 118
What takes place during an SRDF Restore operation?

- A. Changes made to the R1 are propagated to the R2. Changes made to the R2 are discarded
- B. Enables access to both the R1 and R2 devices for their hosts
- C. Resumes normal SRDF mirroring and host access
- D. Changes made to the R2 are propagated to the R1 Changes made to the R1 are discarded

정답：A

설명：
Step by Step Comprehensive Detailed Explanation:
In SRDF (Symmetrix Remote Data Facility), a "Restore" operation is used to resynchronize the source (R1) and target (R2) devices after a situation where the target device might have been modified independently.
This typically occurs after a failover scenario where the target device becomes the primary and undergoes changes.
During an SRDF Restore operation:
* R2 Changes Discarded:Any changes made to the target (R2) device since the last synchronization are discarded.
* R1 Changes Propagated:The current data on the source (R1) device is copied over to the target (R2), overwriting any existing data on the target.
This effectively restores the target device to a state consistent with the source device, ensuring data integrity and consistency.
Why other options are incorrect:
* B. Resumes normal SRDF mirroring and host access:While a Restore operation can be part of the failback process, it's not the only step involved. Failback might involve additional actions like reversing replication direction and restoring host access.
* C. Changes made to the R2 are propagated to the R1. Changes made to the R1 are discarded:This describes an "Update" operation, not a "Restore."
* D. Enables access to both the R1 and R2 devices for their hosts:This describes a "Split" operation, where both devices are made

accessible independently.

질문 # 119
Which compression algorithm is used on a PowerMax?

- A. LZW
- B. FastLZ
- C. Deflate
- D. LZS

정답： C

질문 # 120
A systems administrator created a secure snapshot using the -secure -delta 5:12 parameter. When can the snapshot be deleted?

- A. Secure snapshots cannot be deleted
- B. 5 days and 12 hours after creation
- C. 5 hours and 12 minutes after creation
- D. 5 minutes and 12 seconds after creation

정답： B
