

100% Pass Quiz 2026 Updated Forescout Latest FSCP Study Guide

BTW, DOWNLOAD part of Pass4cram FSCP dumps from Cloud Storage: <https://drive.google.com/open?id=1F71xnG3JEMx9uy5D2xMKiD6mfRdBirrV>

When we update the FSCP preparation questions, we will take into account changes in society, and we will also draw user feedback. If you have any thoughts and opinions in using our FSCP study materials, you can tell us. We hope to grow with you and the continuous improvement of FSCP training engine is to give you the best quality experience. And you can get the according FSCP certification as well.

Our FSCP exam braindumps have become a brand that is good enough to stand out in the market. The high quality product like our FSCP study quiz has no need to advertise everywhere, and exerts influential effects which are obvious and everlasting during your preparation. The exam candidates of our FSCP Study Materials are the best living and breathing ads. Just look at the comments on the FSCP training guide, you will know that how popular they are among the candidates.

Latest FSCP Test Prep - FSCP Reliable Exam Questions

PDF version of FSCP training materials is legible to read and remember, and support printing request, so you can have a print and practice in papers. Software version of practice materials supports simulation test system, and give times of setup has no restriction. Remember this version support Windows system users only. App online version of FSCP Exam Questions is suitable to all kinds of equipment or digital devices and supportive to offline exercise on the condition that you practice it without mobile data.

Forescout FSCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> General Review of FSCA Topics: This section of the exam measures skills of network security engineers and system administrators, and covers a broad refresh of foundational platform concepts, including architecture, asset identification, and initial deployment considerations. It ensures you are fluent in relevant baseline topics before moving into more advanced areas.]. Policy Best Practices: This section of the exam measures skills of security policy architects and operational administrators, and covers how to design and enforce robust policies effectively, emphasizing maintainability, clarity, and alignment with organizational goals rather than just technical configuration.
Topic 2	<ul style="list-style-type: none"> Notifications: This section of the exam measures skills of monitoring and incident response professionals and system administrators, and covers how notifications are configured, triggered, routed, and managed so that alerts and reports tie into incident workflows and stakeholder communication.

Topic 3	<ul style="list-style-type: none"> • Plugin Tuning HPS: This section of the exam measures skills of plugin developers and endpoint integration engineers, and covers tuning the Host Property Scanner (HPS) plugin: how to profile endpoints, refine scanning logic, handle exceptions, and ensure accurate host attribute collection for enforcement.
Topic 4	<ul style="list-style-type: none"> • Advanced Product Topics Licenses, Extended Modules and Redundancy: This section of the exam measures skills of product deployment leads and solution engineers, and covers topics such as licensing models, optional modules or extensions, high availability or redundancy configurations, and how those affect architecture and operational readiness.
Topic 5	<ul style="list-style-type: none"> • Advanced Troubleshooting: This section of the exam measures skills of operations leads and senior technical support engineers, and covers diagnosing complex issues across component interactions, policy enforcement failures, plugin misbehavior, and end to end workflows requiring root cause analysis and corrective strategy rather than just surface level fixes.
Topic 6	<ul style="list-style-type: none"> • Advanced Product Topics Certificates and Identity Tracking: This section of the exam measures skills of identity and access control specialists and security engineers, and covers the management of digital certificates, PKI integration, identity tracking mechanisms, and how those support enforcement and audit capability within the system.
Topic 7	<ul style="list-style-type: none"> • Customized Policy Examples: This section of the exam measures skills of security architects and solution delivery engineers, and covers scenario based policy design and implementation: you will need to understand business case requirements, craft tailored policy frameworks, adjust for exceptional devices or workflows, and document or validate those customizations in context.
Topic 8	<ul style="list-style-type: none"> • Policy Functionality: This section of the exam measures skills of policy implementers and integration specialists, and covers how policies operate within the platform, including dependencies, rule order, enforcement triggers, and how they interact with device classifications and dynamic attributes.

Forescout Certified Professional Exam Sample Questions (Q73-Q78):

NEW QUESTION # 73

When creating a new "Send Mail" notification action, which email is used by default?

- A. The email entered in the send mail action on the rule
- **B. The email configured under Options > General > Mail**
- C. The email that was used when registering the license
- D. The email address of the last logged in user
- E. The Tech Support email

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide, when creating a new "Send Mail" notification action, the email configured under Options > General > Mail is used by default.

Default Email Configuration:

According to the Managing Email Notifications documentation:

"From the Tools menu, select Options > General > Mail and DNS. Update any of the following fields: Send Email Alerts / Notifications - List email addresses to receive CounterACT email alerts." This setting establishes the default recipients for all email notifications across the system.

Email Notification Hierarchy:

According to the documentation:

* Default Recipients (Options > General > Mail) - Used when no specific recipients are defined

* Policy-Specific Recipients - Can override defaults in individual policy actions

* Action-Level Recipients - The "Send Mail" action can specify custom recipients When "Send Mail" Action Uses Defaults:

According to the documentation:

When you create a "Send Mail" action without specifying custom recipients, the system automatically uses the email addresses configured in:

* Tools > Options > General > Mail and DNS

* The "Send Email Alerts/Notifications" field

Why Other Options Are Incorrect:

* B. Email of the last logged in user - The system doesn't track login history for email defaults

* C. The Tech Support email - There is no "Tech Support email" setting in Forescout

* D. Email used for license registration - License email is not used for policy notifications

* E. Email entered in the send mail action on the rule - While this CAN override defaults, it's not the DEFAULT used when creating the action Referenced Documentation:

* Managing Forescout Platform Email Notifications

* Managing Email Notifications

* Managing Email Notification Addresses

NEW QUESTION # 74

What should you do first when preparing for an upgrade to a new CounterACT version?

- A. Upgrade the members first before upgrading the EM.
- B. Upgrade only the modules compatible with the version you are installing.
- C. Consult the CounterACT Release Notes for the appropriate version
- D. From the appliance CLI, fstool upgrade /tmp/counteract-v8.0.1.fsp
- E. Upgrading an appliance is done through Options/Modules.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Upgrade Guides for multiple versions, the first thing you should do when preparing for an upgrade to a new CounterACT version is consult the CounterACT Release Notes for the appropriate version.

Release Notes as First Step:

According to the official documentation:

"Review the Forescout Release Notes for important information before performing any upgrade." The documentation emphasizes this as a critical first step before any other upgrade activities.

What Release Notes Contain:

According to the upgrade guidance:

The Release Notes provide essential information including:

- * Upgrade Paths - Which versions you can upgrade from and to
- * Pre-Upgrade Requirements - System requirements and prerequisites
- * End-of-Life Products - Products that must be uninstalled before upgrade
- * Non-Supported Products - Products not compatible with the new version
- * Module/Plugin Dependencies - Version compatibility requirements
- * Known Issues - Potential problems and workarounds
- * Upgrade Procedures - Step-by-step instructions
- * Rollback Information - How to revert if needed

Critical Pre-Upgrade Information:

According to the Release Notes guidance:

"The upgrade process does not continue when end-of-life products are detected." Release Notes list:

- * End-of-Life (EOL) Products - Must be uninstalled before upgrade
- * Non-Supported Products - Must be uninstalled before upgrade
- * Plugin Version Compatibility - Which plugin versions work with the new Forescout version Upgrade Order vs. Release Notes

Review:

According to the documentation:

While the order of upgrade (EM first, then Appliances) is important, consulting Release Notes comes FIRST because it determines what needs to be done before any upgrade attempts.

The Release Notes tell you:

- * Whether you can upgrade at all
- * What must be uninstalled
- * System requirements
- * Compatibility information

Only AFTER reviewing Release Notes do you proceed with the actual upgrade sequence.

Why Other Options Are Incorrect:

* A. Upgrade the members first before upgrading the EM - This is the OPPOSITE of correct order; EM (Enterprise Manager) should be upgraded first

- * B. Upgrading an appliance is done through Options/Modules - This is not the upgrade path; upgrades are done through Tools > Options > CounterACT Devices
- * C. From the appliance CLI, fstool upgrade /tmp/counteract-v8.0.1.fsp - This is ONE possible upgrade method, but not the first step; downloading and reviewing Release Notes comes first
- * E. Upgrade only the modules compatible with the version you are installing - This is a consideration found IN the Release Notes, not the first step itself

Correct Upgrade Sequence:
According to the comprehensive upgrade documentation:
text

1. FIRST: Review Release Notes (determine what's needed)
2. Second: Check system requirements
3. Third: Uninstall EOL/non-supported products
4. Fourth: Back up Enterprise Manager and Appliances
5. Fifth: Upgrade Enterprise Manager
6. Sixth: Upgrade Appliances

Referenced Documentation:

- * Before You Upgrade the Forescout Platform - v8.3
- * Before You Upgrade the Forescout Platform - v9.1.2
- * Forescout 8.1.3 Release Notes
- * Installation Guide v8.0 - Upgrade section

NEW QUESTION # 75

Which setting is NOT available when initially adding a server to the User Directory Plugin?

- A. Replica
- B. Test
- C. Domain Aliases
- D. Domain
- E. Advanced

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout User Directory Plugin Configuration Guide and supported integration documentation, Replica is NOT available when initially adding a server to the User Directory Plugin.

Replicas are configured after the initial server setup is complete.

User Directory Server Initial Setup Process:

When initially adding a User Directory server, the following settings are available:

- * Server Name - The name to identify the server in Forescout
- * Address - The IP address or FQDN of the User Directory server
- * Port - The port number (typically 389 for LDAP, 636 for secure LDAP)
- * Domain - The domain name associated with the User Directory
- * Test - Option to test the connection and credentials
- * Advanced - Advanced configuration options

Replica Configuration - Post-Initial Setup:

According to the documentation:

"After configuring server settings, you can configure server tests and replicas." The Replica settings are NOT available during the initial server addition. Instead, replicas are configured as a separate step after the primary server configuration is complete.

Replica Setup Workflow:

According to the User Directory Plugin configuration process:

- * Step 1: Add Server - Configure the primary server with Name, Address, Port, Domain
- * Step 2: Test Connection - Use the Test option to verify connectivity
- * Step 3: Configure Replicas - After the primary server is fully configured, then add replica servers The documentation explicitly states:

"Refer to the following sections for server configuration details. After configuring server settings, you can configure server tests and replicas." Why Other Options Are Available Initially:

- * A. Test -#Available initially; allows testing of server credentials and connectivity before completion
- * B. Domain -#Available initially; domain name is required during server setup
- * C. Domain Aliases -#Available initially; additional domain aliases can be specified for the server
- * D. Advanced -#Available initially; advanced options like authentication types, TLS, etc. are available during setup

Purpose:

Replicas are used to provide redundancy and failover capability. According to the documentation:

When replica servers are configured:

- * If the primary User Directory server becomes unavailable, the Forescout platform can failover to a replica server
- * Multiple replicas can be specified for increased fault tolerance

Referenced Documentation:

- * Forescout User Directory Plugin Configuration - Server Setup documentation
- * Configure server settings - After configuring server settings section
- * User Directory Plugin configuration videos and tutorials showing initial setup flow

NEW QUESTION # 76

When using the "Assign to VLAN action," why might it be useful to have a policy to record the original VLAN?

Select one:

- A. Since CounterACT reads the running config to find the original VLAN, network administrators saving configuration changes to switches could overwrite this VLAN information
- **B. Since CounterACT reads the running config to find the original VLAN, any changes to switch running configs could overwrite this VLAN information**
- C. Since CounterACT reads the startup config to find the original VLAN, network administrators making changes to switch running configs could overwrite this VLAN information
- D. Since CounterACT reads the startup config to find the original VLAN, network administrators saving configuration changes to switches could overwrite this VLAN information
- E. Since CounterACT reads the running config to find the original VLAN, network administrators making changes to switch running configs could overwrite this VLAN information

Answer: B

Explanation:

According to the Forescout Switch Plugin documentation, the correct answer is: "Since CounterACT reads the running config to find the original VLAN, any changes to switch running configs could overwrite this VLAN information".

Why Recording Original VLAN is Important:

According to the documentation:

When CounterACT assigns an endpoint to a quarantine VLAN:

- * Reading Original VLAN - CounterACT reads the switch running configuration to determine the original VLAN
 - * Temporary Change - The endpoint is moved to the quarantine VLAN
 - * Restoration Issue - If network administrators save configuration changes to the running config, CounterACT's reference to the original VLAN may be overwritten
 - * Solution - Recording the original VLAN in a policy ensures you have a backup reference
- Why Option D is the Most Accurate:
Option D states the key issue clearly: "any changes to switch running configs could overwrite this VLAN information." This is the most comprehensive and accurate statement because it acknowledges that ANY changes (not just those by administrators specifically) could cause the issue.

NEW QUESTION # 77

When configuring a Send Email action to notify CounterACT administrators, how do you add endpoint specific host information to the message?

- A. It is not possible to add specific host information for detected endpoints.
- B. Edit the "Message to Email Recipient" Field of the Send Email action Parameters tab, then click "Tag" to add the desired keyword tag.
- C. Create criteria in sub-rules to detect the desired specific host information. The "Send Email" action will send this information to the CounterACT administrator.
- D. Edit the Options > General > Mail settings and click "Tag" to add the desired property values.
- **E. Edit the "Message to Email Recipient" Field of the Send Email action Parameters tab, then click "Tag" to add the desired property value.**

Answer: E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide - Send Email action documentation, to add endpoint- specific host information to a Send Email notification, you should "Edit the 'Message to Email Recipient' Field of the Send Email action Parameters tab, then click 'Tag' to add the desired property value".

Property Tags in Send Email Action:

According to the Property Tags documentation:

"Property tags insert endpoint values into condition or action fields, and are replaced by the actual endpoint property value when the field is evaluated." Property tags allow dynamic insertion of endpoint-specific data into email messages.

How to Add Property Tags to Email:

According to the documentation:

- * Edit Send Email Action - Open the Send Email action configuration
- * Navigate to Parameters Tab - Select the Parameters tab
- * Edit Message Field - Edit the "Message to Email Recipient" field
- * Click Tag Button - Select the "Tag" button/option
- * Choose Property - Select the endpoint property to insert (e.g., IP address, OS, etc.)
- * Confirm - The property tag is inserted into the message

Example Email Message with Property Tags:

According to the More Action Tools documentation:

text

Example message:

"Endpoint [IP.Address] with hostname [IP.Hostname]
has failed compliance check for operating system [OS]."

When evaluated:

"Endpoint 192.168.1.50 with hostname WORKPC-01
has failed compliance check for operating system Windows 10."

Available Properties for Tags:

According to the documentation:

Property tags can reference:

- * IP Address
- * MAC Address
- * Hostname
- * Operating System
- * Device Function
- * User information
- * Custom endpoint properties

Why Other Options Are Incorrect:

- * A. Create criteria in sub-rules - Sub-rules don't send email; they're for conditional logic
- * C. Edit Options > General > Mail settings - This is for global email configuration, not message customization
- * D. It is not possible - Incorrect; property tags specifically enable this functionality
- * E. "Keyword tag" - The feature uses "property tags" or "tags," not "keyword tags" Referenced Documentation:
- * Send Email action
- * Property Tags
- * More Action Tools - Property tags section

NEW QUESTION # 78

.....

Our company is a multinational company which is famous for the FSCP training materials in the international market. After nearly ten years' efforts, now our company have become the topnotch one in the field, therefore, if you want to pass the FSCP exam as well as getting the related certification at a great ease, I strongly believe that the study materials compiled by our company is your solid choice. To be the best global supplier of electronic study materials for our customers through innovation and enhancement of our customers' satisfaction has always been our common pursuit. The advantages of our FSCP Study Guide are as follows.
