NEW QUESTION # 478

Which of the following best describe a penetration test that resembles an actual external attack?

- A. Known environment
- B. Partially known environment

- **D. Unknown environment**

Answer: D

An unknown environment in penetration testing, also known as a black-box test, simulates an actual external attack where the tester has no prior knowledge of the system. This type of penetration test is designed to mimic real-world attack scenarios, where an attacker has little to no information about the target environment.
